advanced placement biology ebook: E-Pedagogy for the Digital Age Dr. P. C. Nagasubramani, Adult learners have more options for enrolling in postsecondary education than ever before, and they are able to use their learning style preference in deciding which program best meets their needs. For some of these students, those programs are fully online, and for others, there is minimal use of technology. As technology grows and become more integrated into individual lives, the unique learning styles and preferences of adults need to learn to be incorporated into instructional design. Drawing on a regional sample of US colleges, 545 adult learners in a graduate programs were surveyed about how to effectively build community in their online classes. Results indicated some agreement with these instructional tools. Mature adult learners, however, were found to have stronger agreement with strategies that included work outside of the formal online class. These results suggest perhaps a greater comfort for adults in working in spaces where there is less likelihood of being judged or graded, and that they might value relational work with other students in different ways than younger adults.

advanced placement biology ebook: Education Networks Joel Spring, 2012-03-22 Education Networks is a critical analysis of the emerging intersection among the global power elite, information and communication technology, and schools. Joel Spring documents and examines the economic and political interests and forces—including elite networks, the for-profit education industry, data managers, and professional educators—that are pushing the use of ICT for online instruction, test preparation and tutoring, data management, instructional software packages, and more, and looks closely at the impact this is having on schools, students, and learning. Making a distinction between mind (as socially constructed) and brain (as a physiological entity), Spring draws on recent findings from comparative psychology on the possible effects of ICT on the social construction of the minds of students and school managers, and from neuroscience regarding its effect on students' brains. Throughout, the influence of elite networks and powerful interest groups is linked to what is happening to children in classrooms. In conclusion Spring offers bold suggestions to change the course of the looming technological triumph of ICT in the brave new world of schooling.
