academic integrity iu quiz: Preparing for College and University Teaching Joanna Gilmore, Molly Hatcher, 2023-07-03 This book is a guide for designing professional development programs for graduate students. The teaching competencies framework presented here can serve as the intended curriculum for such programs. The book will also be an excellent resource for evaluating programs, and will be an excellent resource for academics who study graduate students. This book presents the work of the Graduate Teaching Competencies Consortium to identify, organize, and clarify the competencies that graduate students need to teach effectively when they join the professoriate. To achieve this goal, the Consortium developed a framework of 10 teaching competencies organized around three overarching questions: • What do graduate students need to achieve by the end of their graduate education to be successful teacher-scholars? • What do graduate students need to understand about higher education to have successful careers as educators? • What do graduate students need to do to be successful teachers during their graduate student careers? Although much work has been done to identify the competencies of effective teachers in higher education, only a small portion of this work has been conducted with graduate student instructors. This is an important area of research given that graduate students are critical in the higher education academic pipeline. Nationally, graduate students teach between 25% and 50% of courses offered at the undergraduate level. Graduate student teaching is also critical because during early teaching experiences teachers establish a teaching style and set of teaching skills, which will endure as graduate students enter the professoriate. It is important to develop a teaching competency framework that is specific to graduate student instructors as they often have unique needs and roles as teachers. For example, graduate student instructors are in the unique position of becoming experts in their field concurrent with learning to teach. Moreover, as many professional development programs for graduate student instructors evolve based upon factors such as available resources and perceived needs of graduate students, this framework will be a useful aid for thoughtfully designing strategic, evidence-based, comprehensive professional development opportunities and programs.

Reading Across the Disciplines offers a collection of twelve essays detailing a range of approaches to dealing with students' reading needs at the college level. Transforming reading in higher education requires more than individual faculty members working on SoTL projects in their particular fields. Teachers need to consider reading across the disciplines. In this collection, authors from Australia and North America, teaching in a variety of disciplines, explore reading in undergraduate courses, doctoral seminars, and faculty development activities. By paying attention to the particular classroom and placing those observations in conversation with scholarly literature, they create new knowledge about reading in higher education from disciplinary and cross-disciplinary perspectives. Reading Across the Disciplines demonstrates how existing research about reading can be applied to specific classroom contexts, offering models for faculty members whose own research interests may lie elsewhere but who believe in the importance of reading.
