Raipurkar, 2021-02-21 Water: an Elixir of Life Water is a dynamic system and important natural resource. It contains living as well as non living, organic and inorganic and also soluble and insoluble substances. Its constituent varies with time. Any change in the natural composition causes disturbances to the equilibrium system. This results in the degradation of water making it unfit for desirable use (Murhekar, G.H., 2011 and Maiti S.K., 2011). Water is the essence of life which dominates completely in chemical composition of all organisms. The surface water and ground water resources of any nation play a major role in industrial, agriculture, live stock production, forestry and fisheries, hydropower generation, navigation and recreational activities etc. (Kadam et al.,

2014). India receives about 1400-1800 mm of rainfall annually. It is estimated that 96% of this water is used for agriculture, 3% for domestic use and 1% for industrial activity. An analysis conducted in 1982 revealed that about 70% of all the available and the unavailable water in our country is polluted (Dara and Mishra, 2014).

analytical chemistry chatwal ebook: Artificial Intelligence and Precision Oncology Zodwa Dlamini, 2023-01-21 This book highlights the use of artificial intelligence (AI), big data and precision oncology for medical decision making in cancer screening, diagnosis, prognosis and treatment. Precision oncology has long been thought of as ideal for the management and treatment of cancer. This strategy promises to revolutionize the treatment, control, and prevention of cancer by tailoring tests, treatments and predictions to specific individuals or population groups. In order to accomplish these goals, vast amounts of patient or population group specific data needs to be integrated and analysed to be able to identify key patterns or features which can be used to define or characterize the disease or the response to the disease in these individuals. These patterns or features can be as varied as molecular patterns or features in medical images. This level of data analysis and integration can only be achieved through the use of AI. The book is divided into three parts starting with a section on the use of artificial intelligence for screening, diagnosis and monitoring in precision oncology. The second part: Artificial intelligence and Omics in precision oncology, highlights the use of AI and epigenetics, metabolomics, microbiomics in precision oncology. The third part covers artificial intelligence in cancer therapy and its clinical applications. It also highlights the use of AI tools for risk prediction, early detection, diagnosis and accurate prognosis. This book, written by experts in the field from academia and industry, will appeal to cancer researchers, clinical oncologists, pathologists, medical students, academic teaching staff and medical residents interested in cancer research as well as those specialising as clinical oncologists.

analytical chemistry chatwal ebook: Educational Broadcasting in Nigeria in the Age of Artificial Intelligence Unwana Samuel Akpan, 2024-10-01 This book does two things, first it

celebrates and honors the research, scholarship, and leadership of Comfort Memfin Ekpo, the renowned Nigerian professor of educational technology, who is the second female vice chancellor to head a federal university in Nigeria. This book also explores the profound impact of digital interruptions and disruptions in the broadcast sector in Nigeria, exacerbated by the advent of artificial intelligence (AI). The book underscores the inadequacy of existing discourse to encompass the transformation of traditional educational broadcasting and programming. With Nigeria grappling with the highest number of out-of-school children globally, the book explores the urgent need to re-evaluate educational programs in the digital age, targeting marginalized populations hindered by factors such as electricity shortages and insufficient resources. The book, comprising contributions from senior scholars across Nigeria, aims to dissect the challenges and opportunities presented by AI and digitization in reshaping educational broadcasting. Unprecedented in its interdisciplinary approach, the book explores the intersections of communication, media, education, government policies, and the globalized landscape, offering a comprehensive analysis of the evolving dynamics in the field.

analytical chemistry chatwal ebook: Explainable Artificial Intelligence for Smart Cities Mohamed Lahby, Utku Kose, Akash Kumar Bhoi, 2021-11-09 Thanks to rapid technological developments in terms of Computational Intelligence, smart tools have been playing active roles in daily life. It is clear that the 21st century has brought about many advantages in using high-level computation and communication solutions to deal with real-world problems; however, more technologies bring more changes to society. In this sense, the concept of smart cities has been a widely discussed topic in terms of society and Artificial Intelligence-oriented research efforts. The rise of smart cities is a transformation of both community and technology use habits, and there are many different research orientations to shape a better future. The objective of this book is to focus on Explainable Artificial Intelligence (XAI) in smart city development. As recently designed, advanced smart systems require intense use of complex computational solutions (i.e., Deep Learning, Big Data, IoT architectures), the mechanisms of these systems become 'black-box' to users. As this means that there is no clear clue about what is going on within these systems, anxieties regarding ensuring trustworthy tools also rise. In recent years, attempts have been made to solve this issue with the additional use of XAI methods to improve transparency levels. This book provides a timely, global reference source about cutting-edge research efforts to ensure the XAI factor in smart city-oriented developments. The book includes both positive and negative outcomes, as well as future insights and the societal and technical aspects of XAI-based smart city research efforts. This book contains nineteen contributions beginning with a presentation of the background of XAI techniques and sustainable smart-city applications. It then continues with chapters discussing XAI for Smart Healthcare, Smart Education, Smart Transportation, Smart Environment, Smart Urbanization and Governance, and Cyber Security for Smart Cities.
