Deen, 2015-09-02 Geographical Knowledge Construction and Production: Teacher and Student Perspectives is a readable and illuminating account of three high school classrooms in suburban Atlanta, Georgia. The research provides insight into the College Board's AP programme and argues for teaching and learning that is transformative and geared toward equipping students with the skills and knowledge necessary to confront the challenges of the 21st century. In particular, it advocates for geographic education that is anchored in the structure of the subject, teasing wherever possible, the

contradictions and tensions embedded in the complexities of facts relating to people and places. This book is essential reading for professors and students of education, teachers and students of AP courses, parents, administrators, and state and federal agencies vested in the AP programme.

advanced placement human geo pdf: Learning in the Fast Lane Chester E. Finn, Jr., Andrew E. Scanlan, 2021-05-11 More than three million high-school students take five million Advanced Placement exams each May, yet remarkably little is known about how this sixty-year-old, privately-run program, has become one of U.S. education's greatest successes. From its mid-century origin as a tiny option for privileged kids from posh schools, AP has also emerged as a booster rocket into college for hundreds of thousands of disadvantaged youngsters. It challenges smart kids, affects school ratings, affords rewarding classroom challenges to great teachers, tunes up entire schools, and draws vast support from philanthropists, education reformers and policymakers. AP stands as America's foremost source of college-level academics for high school pupils. Praised for its rigor and integrity, more than 22,000 schools now offer some-or many-of its thirty-eight subjects, from Latin to calculus, art to computer science. But challenges abound today, as AP faces stiffening competition (especially dual credit), curriculum wars, charges of elitism, misgivings by elite schools and universities, and the arduous work of infusing rigor into schools that lack it and academic success into young people unaccustomed to it. In today's polarized climate, can Advanced Placement maintain its lofty standards and overcome the hostility, politics and despair that have sunk so many other bold education ventures? *Advanced Placement: The Unsung Success Story of American Education* is a unique account-richly documented and thoroughly readable-of the AP program in all its strengths and travails, written by two of America's most respected education analysts--

advanced placement human geo pdf: Handbook of Research on Advanced Research Methodologies for a Digital Society Punziano, Gabriella, Delli Paoli, Angela, 2021-09-03 Doing research is an ever-changing challenge for social scientists. This challenge is harder than ever today as current societies are changing quickly and in many, sometimes conflicting, directions. Social phenomena, personal interactions, and formal and informal relationships are becoming more borderless and disconnected from the anchors of the offline "reality." These dynamics are heavily marking our time and are suggesting evolutionary challenges in the ways we know, interpret, and analyze the world. Internet and computer-mediated communication (CMC) is being incorporated into every aspect of daily life, and social life has been deeply penetrated by the internet. This is due to recent technological developments that increase the scope and range of online social spaces and the forms and time of participation such as Web 2.0, which widened the opportunities for user-generated content, the emergence of an "internet of things," and of ubiquitous mobile devices that make it possible to always be connected. This implies an adjustment to epistemological and methodological stances for conducting social research and an adaption of traditional social research methods to the specificities of online interactions in the digital society. The Handbook of Research on Advanced Research Methodologies for a Digital Society covers the different strands of methods most affected by the change in a digital society and develops a broader theoretical reflection on the future of social research in its challenge to always be fitting, suitable, adaptable, and pertinent to the society to be studied. The chapters are geared towards unlocking the future frontiers and potential for social research in the digital society. They include theoretical, epistemological, and ontological reflections about the digital research methods as well as innovative methods and tools to collect, analyze, and interpret data. This book is ideal for social scientists, practitioners, librarians, researchers, academicians, and students interested in social research methodology and its developments in the digital scenario.

advanced placement human geo pdf: Urban Memory in City Transitions Ali

Cheshmehzangi, 2021-04-02 As a continuation of 'Identity of Cities and City of Identities', this book covers the arguments around the memory-experience-cognition nexus concerning palimpsests and urban places. As cities experience transitional phases of growth, development, decline, and decay, the author urges considering the notion of urban memory in place-making strategies and design decision-making processes. These explorations would add value to primary fields of architecture, architectural history, cognitive science, human geography, and urbanism. Divided into eight chapters, this book puts together a comprehensive knowledge of urban memory in city transitions. By studying urban memory, the author delves into conceptions of mental mapping, knowledge of environments, cognition of places, and the perceptual dimension of urbanism. Undoubtedly, urban memory plays a significant part in the future movements of humanistic urbanism. Given the significances of scale, pace, and mode of city transitions globally, we should remember who are the ultimate users of those living environments. Therefore, in this book, the author debates two contradictions of 'memory of place vs. place of memory', and 'significance of place vs. place of significance'. Each of these is believed to be a paradox of its own, indicating places are significant through the systematic networks of cities, memories are meaningful through the neural information processing, and place memories are the essence of urban identities. The book's ultimate goal is to demonstrate the effectiveness of the space-time frame of place in making memorable places. Through the comprehensive explorations of many global examples, we can evaluate the significance of place in mind more carefully. This is narrated based on the recognition of nostalgia in cities, socio-temporal qualities in places, and the network of processes in our minds. In return, the aim is to provide new knowledge to make memorable cities, enhance social experiences, and capture and value the significance of place in mind.
