Top Digital Geography Tools

Geographic Information Systems (GIS)

GIS platforms are among the most powerful American geography resources available today. They enable users to collect, analyze, and interpret spatial data related to land use, population distribution, transportation networks, and environmental changes. GIS is widely used by professionals in urban planning, environmental science, government agencies, and academia. These tools support advanced mapping, data layering, and predictive modeling for research and decision-making.

Online Atlases and Mapping Applications

Modern online atlases offer interactive features, detailed cartography, and up-to-date data on American geography. Users can explore maps of states, cities, and regions, access population statistics, and examine physical features like rivers and mountains. Many mapping applications also provide satellite imagery and street-level views, making them versatile tools for both teaching and exploration.

Educational Websites and E-Learning Platforms

Several educational websites specialize in geography resources tailored for American studies. These platforms provide lesson plans, quizzes, teaching guides, and student activities aligned with national standards. Many sites offer downloadable content, virtual tours, and interactive exercises for self-paced learning.

american geography resources: *Geography in America at the Dawn of the 21st Century* Gary L. Gaile, Cort J. Willmott, 2005 Geography in America at the Dawn of the 21st Century surveys American geographers' current research in their specialty areas and tracks trends and innovations in the many subfields of geography. As such, it is both a 'state of the discipline' assessment and a topical reference. It includes an introduction by the editors and 47 chapters, each on a specific specialty. The authors of each chapter were chosen by their specialty group of the American Association of Geographers (AAG). Based on a process of review and revision, the chapters in this volume have become truly representative of the recent scholarship of American geographers. While it focuses on work since 1990, it additionally includes related prior work and work by non-American geographers. The initial Geography in America was published in 1989 and has become a benchmark reference of American geographical research during the 1980s. This latest volume is completely new and features a preface written by the eminent geographer, Gilbert White.

american geography resources: Geography, Resources and Environment, Volume 1 Gilbert F. White, 1986-02 Gilbert F. White is the preeminent geographer of natural resources, hazards, and the human environment. During fifty years of professional work as civil servant, scientist, and educator, he authored numerous books and papers. This volume is the first collection of White's work, spanning his interests and career from 1934 to 1984. Individual introductions by the editors place each selection in historical perspective and assay its significance. With the companion volume, Theme from the Work of Gilbert F. White, White's writings, and the work that he inspired, are now readily accessible to all who share his concern for the stewardship of the earth.

american geography resources: Geography, Resources and Environment, Volume 2 Gilbert F. White, 1986 Over the course of half a century, Gilbert F. White's work has served to shape and, in several instances, establish many of the fields that have come to be known as the environmental sciences. In this collection of original essays, a companion volume to White's selected writings (volume I), leading scholars in areas such as water supply, environmental hazards, and natural resource management interpret changes in these fields since White's work and assess present and future problems. With volume 1, this collection presents a complete and cogent picture of Gilbert White's contribution and the work he inspired.

A Research Guide to Cartographic Resources navigates the numerous American and Canadian cartographic resources available in print and online, offering researchers, academics and students

with information on how to locate and access the large variety of resources, new and old. Dozens of different cartographic materials are highlighted and summarized, along with lists of map libraries and geospatial centers, and related professional associations. A Research Guide to Cartographic Resources consists of 18 chapters, two appendices, and a detailed index that includes place names, and libraries, structured in a manner consistent with most reference guides, including cartographic categories such as atlases, dictionaries, gazetteers, handbooks, maps, plans, GIS data and other related material. Almost all of the resources listed in this guide are categorized by geography down to the county level, making efficient work of the type of material required to meet the information needs of those interested in researching place-specific cartographic-related resources. Additionally, this guide will help those interested in not only developing a comprehensive collection in these subject areas, but get an understanding of what materials are being collected and housed in specific map libraries, geospatial centers and their related websites. Of particular value are the sections that offer directories of cartographic and GIS libraries, as well as comprehensive lists of geospatial datasets down to the county level. american geography resources: Sustainable Forestry Challenges for Developing Countries Matti Palo, G. Mery, 1996-10-31 This book is an outcome of a research project on Sustainable Forestry and the Environment in Developing Countries. The project has been run by Metsantutki muslaitos METLA -the Finnish Forest Research Institute since 1987 and will be completed this year. A major output by this project has so far been a report in three volumes on Deforestation or development in the Third World? The purpose of our multidisciplinary research project is to generate new knowl edge about the causes of deforestation, its scenarios and consequences. More knowledge is needed for more effective, efficient and equitable public policy,

both at the national and international levels in supporting sustainable forestry in developing countries. Our project has specifically focused on 90 tropical countries as one group and on three subgroups by continents, as well as the three case study countries, the Philippines, Ethiopia and Chile. The University of Joensuu has been our active partner in the Philippine study. We have complemented the three cases by the analyses of Brazil and Indonesia, the two largest tropical forest-owning countries. Some other interesting country studies were annexed to complement our book both by geography and expertise. The United Nations University, World Institute for Development Economics Research, UNU-WIDER in Helsinki Finland has also been partly engaged. Most of the results from its project on The Forest in the South and North in Context of Global Warming will, however, be published later in a separate book.
