analysis curious incident dog: Multimodal Stylistics of the Novel Nina Nørgaard, 2018-10-08
This book advocates for a new analytical framework that extends our understanding of multimodal meaning-making in the novel. Integrating theoretical traditions from stylistics and the influential social semiotic approach to multimodal communication developed by Kress and van Leeuwen, Nørgaard applies this method of analysis in order to build on existing stylistic practices that look at linguistic features in the novel to encompass other semiotic resources found in the form, such as typography, layout, images, paper and book-cover design. The volume grounds the discussion with supporting examples from novels that feature experimentation with multiple semiotic resources as well as more traditional novels, furthering the argument that all novels are inherently multimodal. Offering new insights and tools for unpacking multimodal meaning-making in this critical literary

genre, this volume is an indispensable resource for graduate students and researchers in multimodality, stylistics and literary studies.

analysis curious incident dog: Psychology's Grand Theorists Amy P. Demorest, 2014-04-08 Psychology's Grand Theorists argues that the three schools in psychology that have been dominant historically--the psychodynamic, behavioral, and phenomenological--have resulted in large part from the personal experiences of their originators. Sigmund Freud, B.F. Skinner, and Carl Rogers each believed that he had discovered the truth about human nature, yet their truths are entirely different. This book explores how the lives of these men influenced the divergent theories they developed, through a close examination of letters, diaries, biographies, autobiographies, and professional writings. Uncovering the subjective sources of these theories, the book gives the reader a greater sense of intimacy with each man's ideas, and promotes critical inquiry into their scientific status. The book is written in an engaging style that will appeal to a wide range of readers. Intended as a supplement in courses on personality, clinical psychology, and/or the history of psychology, it will also be of interest to clinicians or counselors who use one or more of these theoretical models in their therapeutic work.

analysis curious incident dog: The Millennial Detective Malcah Effron, 2011-10-10 International in scope and varied in its theoretical approaches, this collection of ten new critical essays examines the prevailing trends in recent crime fiction. Of particular interest are shifting, and increasingly globalized, conceptions of crime, as well as the genre's response to technological, legal, and social changes at the end of the 20th century. analysis curious incident dog: Crime Fiction Migration Christiana Gregoriou, 2017-07-27 Crime narratives form a large and central part of the modern cultural landscape. This book explores the cognitive stylistic processing of prose and audiovisual fictional crime 'texts'. It also examines instances where such narratives find themselves, through popular demand, 'migrating' - meaning that they cross languages, media formats and/or cultures. In doing so, Crime Fiction Migration proposes a move from a monomodal to a multimodal approach to the study of crime fiction. Examining original crime fiction works alongside their translations, adaptations and remakings proves instrumental in understanding how various semiotic modes interact with one another. The book analyses works such as *We Need to Talk About Kevin*, *The Killing* trilogy and the reimagining of plays such as *Shear Madness* and films such as *Funny Games*. Crime fiction is consistently popular and 'on the move' - witness the spate of detective series exported out of Scandinavia, or the ever popular exporting of these shows from the USA. This multimodal and semiotically-aware analysis of global crime narratives expands the discipline and is key reading for students of linguistics, criminology, literature and film.

analysis curious incident dog: The Anti-Oedipus Complex Rob Weatherill, 2017-02-17 The Anti-Oedipus Complex critically explores the post '68 dramatic developments in Freudo-Lacanian psychoanalysis and cultural theory. Beginning with the decline of patriarchy and the master, exemplified by Freud's paean for the Father, the revolutionary path was blown wide open by anti-psychiatry, schizoanalysis and radical politics, the complex antimonies of which are traced here in detail with the help of philosophers, such as Nietzsche, Baudrillard, Levinas, Steiner, Žižek,

Badiou, Derrida and Girard, as well as theologians, analysts, writers, musicians and film makers. In this book, Rob Weatherill, starting from the clinic, considers the end of hierarchies, the loss of the Other, new subjectivities, so-called 'creative destruction', the power of negative thinking, revolutionary action, divine violence and new forms of extreme control. The book raises the following questions: Does the engagement of the Radical Orthodoxy movement offer some hope? Or should we re-situate psychoanalysis within a 'genealogy of responsibility' (Patočka / Derrida) as it emerges out of the sacred demonic, via Plato and Christianity? The Anti-Oedipus Complex will be of interest to psychoanalysts, psychotherapists, counsellors, social workers and scholars in critical theory, philosophy, cultural theory, literary theory and theology.

analysis curious incident dog: Gambling and War Justin Conrad, 2017-10-15 In 1914, as Germany mobilized for war, Chancellor Theobald von Bethmann-Hollweg remarked to the country's legislators, "If the iron dice must roll, then God help us." War has often been compared to a game of dice or a lottery. But just as frequently, war has been compared to a game of pure strategy like chess. In reality, the business of negotiating with adversaries, fighting wars, and ending wars is far more complicated than a game of chess, where each player can see all the pieces on the board and knows the possible moves that they can make. War is far more chaotic and unpredictable. And yet, international bargaining and international conflict is not a simple dice game either, where human beings have no control over the outcome. Justin Conrad bets that war is more like a game of poker. *Gambling and War: Risk, Reward, and Chance in International Conflict*. brings readers a war college course taught at a Las Vegas casino. To succeed in poker, it is not enough to simply anticipate the actions of other players and try to outsmart them. A successful player must also understand and appreciate the role of randomness. Additionally, players must confront the reality that all human beings are prone to errors in judgment, which causes them to make suboptimal choices under many circumstances. Taken together, these challenges make poker a fascinating and highly unpredictable game, much like the challenges of international conflicts. Any comprehensive analysis of why wars occur and how they are fought must take into account a variety of factors including strategy, human error, and dumb luck. *Gambling and War* applies lessons learned from poker, blackjack, roulette, and other games of chance to the study of international conflict. Drawing on scholarly insights from a variety of fields, including probability, statistics, political science, psychology, and economics, Conrad offers thoughts on how we can better manage and prevent international conflict, the costliest game of all.

analysis curious incident dog: Dynamic Processes and Reading Novels Irene O'Leary, 2025-05-12 This book is about the dynamic processes that generate novel-reading. It takes the view that the world is composed of dynamic processes and introduces a process dynamics approach to articulate this stance. This fresh perspective draws on literary studies, process philosophy and neuroscience to argue that dynamic literary and microcognitive processes constantly reconfigure the conditions that they co-create during reading. Analyses of *The PowerBook* by Jeanette Winterson, *The Curious Incident of the Dog in the Night-time* by Mark Haddon and *Oryx and Crake* by Margaret Atwood consider style, narration, allusion and creativity in interaction with diverse microcognitive processes involved in reading. The analyses are strengthened by taking live action into account, illuminating changes that many critical perspectives miss or standardise and avoiding reliance on illusory ideal readers and readings. In proposing a process approach to dynamics and its analysis, this book paves the way for new research across disciplines.
