ap chemistry resources: The Source of the River Douglas S. Massey, Camille Z. Charles, Garvey Lundy, Mary J. Fischer, 2011-06-27 African Americans and Latinos earn lower grades and drop out of college more often than whites or Asians. Yet thirty years after deliberate minority recruitment efforts began, we still don't know why. In *The Shape of the River*, William Bowen and Derek Bok documented the benefits of affirmative action for minority students, their communities, and the nation at large. But they also found that too many failed to achieve academic success. In *The Source of the River*, Douglas Massey and his colleagues investigate the roots of minority underperformance in selective colleges and universities. They explain how such factors as neighborhood, family, peer group, and early schooling influence the academic performance of students from differing racial and ethnic origins and differing social classes. Drawing on a major new source of data--the National Longitudinal Survey of Freshmen--the authors undertake a comprehensive analysis of the diverse pathways by which whites, African Americans, Latinos, and Asians enter American higher education. Theirs is the first study to document the different characteristics that students bring to campus and to trace out the influence of these differences on later academic performance. They show that black and Latino students do not enter college

disadvantaged by a lack of self-esteem. In fact, overconfidence is more common than low self-confidence among some minority students. Despite this, minority students are adversely affected by racist stereotypes of intellectual inferiority. Although academic preparation is the strongest predictor of college performance, shortfalls in academic preparation are themselves largely a matter of socioeconomic disadvantage and racial segregation. Presenting important new findings, *The Source of the River* documents the ongoing power of race to shape the life chances of America's young people, even among the most talented and able.

Jo Sanders, Janice Koch, Josephine Urso, 2013-12-16 What makes girls avoid math, science, and technology in school? And what can teacher educators do to help new teachers keep this from happening so that all of our children's talents can find expression? These two volumes provide teaching materials and background information on gender equity for teacher educators in mathematics, science, and technology education and their students. A practical guide, *Gender Equity Right from the Start* is usable by professors of education for preservice teachers and by staff developers for in-service teachers. By adapting the material for other subjects, it can also be used by teacher educators in content areas other than math, science, and technology. It consists of two volumes: *Instructional Activities for Teacher Educators in Mathematics, Science, and Technology* contains some 200 teaching activities on the major issues in gender equity, emphasizing solutions and not just problems. Activities take place in out-of-class assignments and field experiences whenever possible to minimize demands on class time. *Sources and Resources for Education Students in Mathematics, Science, and Technology* contains student materials needed for the activities as well as extensive print, electronic, organizational, and other resources for further information.

It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.
