ap environmental curriculum guide download: North American and European Perspectives on Sustainability in Higher Education Walter Leal Filho, Julie Newman, Amanda Lange Salvia, Laís Viera Trevisan, Laura Corazza, 2025-04-02 The scientific, cultural and diplomatic relations between Europe and its partners in North America are very strong. From a scientific point of view, this long-standing cooperation has taken place across a wide range of areas. They include the field of sustainability, where North America and Europe are working hand in hand, seeking solutions to the many regional and global problems currently faced. Against this backdrop and in order to facilitate a broad discussion on the contribution of higher education institutions from both sides of the Atlantic towards a more sustainable future, this book is being produced. The book gathers inputs from universities and research organizations on the one hand, but also from companies and enterprises on the other, from Europe and North America, working on matters related to sustainable development in a higher education context. It also provides a platform for the

dissemination of information on the latest initiatives, paving the way for technology transfer and networking. Furthermore, the book intends to provide a fertile basis upon which European and North American organizations may cooperate more closely in this key area. Last but not least, a further aim of the book is to present methodological approaches and experiences deriving from case studies and projects, which aim to show how sustainability in North America and in Europe may be enhanced in practice.

ap environmental curriculum guide download: *Implementing Sustainability in the Curriculum of Universities* Walter Leal Filho, 2017-11-17 This book presents sustainable development themes across universities and introduces methodological approaches and projects to the teaching staff. It has been prepared against this background, to identify ways to better teach about sustainability issues in a university context. It contains a set of papers presented at a Symposium with the same title, held at Manchester Metropolitan University (UK) in March 2017. The event was attended by a number of institutions of higher education active in this field. It involved researchers in the field of sustainable development in the widest sense, from business and economics, to arts and fashion, administration, environment, languages and media studies. Sustainability is seldom systematically embedded in the curriculum at higher education institutions. Yet, proper provisions for curricular integration of sustainability issues as part of teaching programmes across universities are an important element towards curriculum greening. The aims of this book are: (i) to provide teaching staff at universities active and/or interested in teaching sustainable development themes with an opportunity to document and disseminate their works (i.e. curriculum innovation, empirical work, activities, case studies practical projects); (ii) to promote information, ideas and experiences acquired in the execution of teaching courses, especially successful initiatives and good practice; (iii) to introduce methodological approaches and projects which aim to offer a better understanding of how matters related to sustainable development can be tackled in university teaching. Last but not least, a further aim of this book, prepared by the Inter-University Sustainable Development Research Programme (IUSDRP) and the World Sustainable Development Research and Transfer Centre (WSD-RTC), is to catalyse a debate on the need to promote sustainable development teaching today.

ap environmental curriculum guide download: Polar and Climate Change Education

Gisele Arruda, 2024-08-01 This book presents ideas for strengthening the foundations for transformational change in polar and global education leadership in all stages of the education process. Despite being an established concept endorsed by the United Nations Educational, Scientific and Cultural Organization (UNESCO), Education for Sustainable Development (ESD) is still not in the educational mainstream but is vital in mitigating against the intensifying impacts of global change and adapting to the shifts that have already occurred. Drawing on examples from real world projects in the United States, Germany, Mexico, Japan, Peru and Greenland, this book assesses the new educational strategies, pedagogies and technologies which have been adopted by polar educators to stimulate students' interests in sustainability and re-orient education to global citizenship science. The experiential nature of the pedagogies shown in the case studies and educational activities builds background knowledge of cutting-edge research and empowers participants to communicate authentic research practices and show how data collection in the polar region is applicable in other parts of the globe. Highlighting the many ways in which educators for global citizenship can have a decisive role in transforming individuals and society, this book will be of great interest to students and scholars of climate change, education and Arctic studies. It will also be a valuable resource for professional educators working in ESD.
