arthur smith achievements: British Chess Literature to 1914 Tim Harding, 2018-04-16 A huge amount was published about chess in the United Kingdom before the First World War. The growing popularity of chess in Victorian Britain was reflected in an increasingly competitive market of books

and periodicals aimed at players from beginner to expert. The author combines new information about the early history of the game with advice for researchers into chess history and traces the further development of chess literature well into the 20th century. Topics include today's leading chess libraries and the use of digitized chess texts and research on the Web. Special attention is given to the columns that appeared in newspapers (national and provincial) and magazines from 1813 onwards. These articles, usually weekly, provide a wealth of information on early chess, much of which is not to be found elsewhere. The lengthy first appendix, an A to Z of almost 600 chess columns, constitutes a detailed research aid. Other appendices include corrections and supplements to standard works of reference on chess.

arthur smith achievements: Machines as the Measure of Men Michael Adas, 2015-06-04 Over the past five centuries, advances in Western understanding of and control over the material world have strongly influenced European responses to non-Western peoples and cultures. In *Machines as the Measure of Men*, Michael Adas explores the ways in which European perceptions of their scientific and technological superiority shaped their interactions with people overseas. Adopting a broad, comparative perspective, he analyzes European responses to the cultures of sub-Saharan Africa, India, and China, cultures that they judged to represent lower levels of material mastery and social organization. Beginning with the early decades of overseas expansion in the sixteenth century, Adas traces the impact of scientific and technological advances on European attitudes toward Asians and Africans and on their policies for dealing with colonized societies. He concentrates on British and French thinking in the nineteenth century, when, he maintains, scientific and technological measures of human worth played a critical role in shaping arguments for the notion of racial supremacy and the civilizing mission ideology which were used to justify Europe's domination of the globe. Finally, he examines the reasons why many Europeans grew dissatisfied with and even rejected this gauge of human worth after World War I, and explains why it has remained important to Americans. Showing how the scientific and industrial revolutions contributed to the development of European imperialist ideologies, *Machines as the Measure of Men* highlights the cultural factors that have nurtured disdain for non-Western accomplishments and value systems. It also indicates how these attitudes, in shaping policies that restricted the diffusion of scientific knowledge, have perpetuated themselves, and contributed significantly to chronic underdevelopment throughout the developing world. Adas's far-reaching and provocative book will be compelling reading for all who are concerned about the history of Western imperialism and its legacies. First published to wide acclaim in 1989, *Machines as the Measure of Men* is now available in a new edition that features a preface by the author that discusses how subsequent developments in gender and race studies, as well as global technology and politics, enter into conversation with his original arguments.

arthur smith achievements: *The Piltdown Forgery* J. S. Weiner, 2003-11-20 On 21 November 1953, one of the most fascinating puzzles in science was finally solved. Three scientists--Joseph Weiner, Kenneth Oakley, and Wilfrid Le Gros Clark--described their investigations into the important fossilized human remains found at Piltdown in Sussex in the early 1900s. Their conclusion was stunning: the remains, and the accompanying materials that supposedly verified them as ancient fossils, had all been faked. The discovery of Piltdown Man had been announced to the world in 1912 by an amateur fossil hunter, Charles Dawson, and the Keeper of Geology at the Natural History Museum in London, Arthur Smith Woodward, who had found fragments of a thickset skull and an ape-like lower jaw, along with other bones and stone tools. These fragments pointed to a species of early human who had lived in England a million years ago--a 'missing link' between apes and modern man. But, as Weiner and his colleagues were to reveal in 1953, the skull was a recent one, and the jaw had belonged to an orang-utan. These and many other 'finds' from Piltdown had been deliberately stained and tampered with to make them appear ancient, and the scientific establishment had been well and truly fooled. Widely praised from its first publication in 1955, *The Piltdown Forgery* remains the classic account of this story and its many players. In this fiftieth anniversary edition, Professor Chris Stringer, Head of Human Origins at the Natural History Museum in London, provides an introduction to this famous story, and an afterword containing the latest detective-work. Ever-increasing technological powers may one day reveal who did what, and why, but until then this remains an engrossing tale of mixed motives, captivating trickery, and competing egos: a tale fit to rival the works of Sir Arthur Conan Doyle (himself a player in this saga) at his best.
