Given the pain, discomfort, anxiety, heartbreak, and boredom that most humans experience in their lives, is it morally permissible to create them? Some philosophers lately have answered 'No', contending that it is wrong to create a new human life when one could avoid doing so, because it would be bad for the one created. This view is known as 'anti-natalism'. Some contributors to this volume argue that anti-natalism is true because: agents have a prima facie duty to prevent suffering; it is immoral to violate another's right not to be harmed without having consented to it; and it is a serious wrong to exploit the weakness of a poorly off being to become a biological parent. Others here argue against anti-natalism on the ground, for instance, that many of our lives are not so bad and in fact are quite good and that the logic of anti-natalism absurdly entails pro-mortalism, the view that we should kill off as many people as possible. This book explores these and related issues concerning the evaluative question of how to judge the worthwhileness of lives and the normative question of what basic duties entail for the creation of new lives. Excepting one, all the chapters in this book were originally published in the South African Journal of Philosophy.

antinatalism literature download: Procreation Is Murder Anti Procreation, 2017-03-18 Anti Procreation defends anti-natalism (antinatalism) with analytic rigour and compares procreative and non-procreative infliction of death and suffering, and defends other grounds for anti-natalism.

antinatalism literature download: Better Never to Have Been David Benatar, 2008 Most people believe that they were either benefited or at least not harmed by being brought into existence. David Benatar presents a startling challenge to these assumptions. He argues that people systematically overestimate the quality of their life, and suffer quite serious harms by coming into existence.

antinatalism literature download: Debating Procreation David Benatar, David T.

Wasserman, 2015 In this volume, two authors debate the ethics of procreation. One argues for the anti-natalist view that procreation is never morally permissible. In support of that conclusion he advances a number of arguments. In the second half of the book, the second author identifies a variety of moderate pro-natalist positions, which all see procreation as sometimes permissible but never required.

antinatalism literature download: Debating Procreation David Benatar, David Wasserman, 2015-05-01 While procreation is ubiquitous, attention to the ethical issues involved in creating children is relatively rare. In *Debating Procreation*, David Benatar and David Wasserman take opposing views on this important question. David Benatar argues for the anti-natalist view that it is always wrong to bring new people into existence. He argues that coming into existence is always a serious harm and that even if it were not always so, the risk of serious harm is sufficiently great to make procreation wrong. In addition to these philanthropic arguments, he advances the misanthropic one that because humans are so defective and cause vast amounts of harm, it is wrong to create more of them. David Wasserman defends procreation against the anti-natalist challenge. He outlines a variety of moderate pro-natalist positions, which all see procreation as often permissible but never required. After criticizing the main anti-natalist arguments, he reviews those pronatalist positions. He argues that constraints on procreation are best understood in terms of the

role morality of prospective parents, considers different views of that role morality, and argues for one that imposes only limited constraints based on the well-being of the future child. He then argues that the expected good of a future child and of the parent-child relationship can provide a strong justification for procreation in the face of expected adversities without giving individuals any moral reason to procreate

antinatalism literature download: Life Is Not Good Dan Dana, PhD, 2023-06-20 This slim book makes a compelling case that the future of humanity would be better served by limiting procreation. A natural extension of secular humanism, Dr Dana draws from settled science the recognition that, across geologic time, the total weight of suffering in the world far exceeds the pleasures enjoyed by the privileged few. Using his signature haiku quintet poetic form, he artfully leads the reader to this inescapable ethical conclusion. Finally, he offers high-empathy readers practical ways to implement this compassionate worldview, which may initially appear remotely abstract. The nullified occupants of the future would thank us if they could. Advocates of human rights will discover here a powerful arrow in their quiver for opposing the anti-humanistic forces that maintain today's unsustainable population growth.
