central science ebook download: Scientific Natural Philosophy E. E. Escultura, 2011 Scientific Natural Philosophy explains the nature and content of scientific natural philosophy, particularly qualitative modeling, and updates scientific methodology by providing details of the mathematics involved. The book presents a total view of our universe, from the fractal superstring to

its destiny as black holes back in to dark matter, and to the timeless and boundless 'Universe' where our universe is a local super, super galaxy. It stresses the various levels of complementarity between qualitative and quantitative modeling where the former solves and answers questions the latter could not and duality between quantum and macro gravity. It highlights new information from the Grand Unification Theory (GUT) missing in previous philosophical works such as the indestructible generalized nested fractal superstring, brain waves as common medium of the brain and gene for their functions. Moreover, it points to a new technological epoch brought about by the GUT based on utilization of dark matter towards elevating the quality of life. This comprehensive book provides an exciting perspective on this fascinating field to the reader.

central science ebook download: *Sharing* Matthew David, 2017-07-25 Today's economic system, premised on the sale of physical goods, does not fit the information age in which we live. The capitalist order requires the maintenance of an artificial scarcity in goods that have the potential for near infinite and almost free replication. The sharing of informational goods through distributed global networks – digital libraries, file-sharing, live-streaming, free software, free-access publishing, the free-sharing of scientific knowledge, and open-source pharmaceuticals – not only challenges the dominance of a scarcity-based economic system, but also enables a more efficient, innovative, just and free culture. In a series of seven explorations of contemporary sharing, Matthew David shows that in each case sharing surpasses markets, private ownership and intellectual property rights in fostering motivation, creativity, innovation, production, distribution and reward. In transforming the idea of an information economy into an information society, sharing connects struggles against inequality and poverty in developed and developing countries. Challenging taken-for-granted justifications of the status quo, *Sharing* debunks the 'tragedy of the commons' and makes the case for digital network sharing as a viable mode of economic counterpower, prefiguring a post-capitalist society.

central science ebook download: *Rural Lifestyles, Community Well-being and Social Change: Lessons from Country Australia for Global Citizens* Angela T. Ragusa, 2014-01-08 In our increasingly global world, individuals are highly mobile and interconnected. Politics, policies and technologies foster interconnection amongst and within countries as individuals relocate from one place to another. One key issue facing developed and developing countries is urban overcrowding. In Australia, urban density is one factor prompting institutions and individuals to embrace 'rural revival' as a possible solution to urban congestion and rural decline. In the past decade, rural Australia has received heightened publicity and interest as a lifestyle destination encouraged by national decentralization policies to alleviate urban overcrowding, particularly the metropolises Melbourne and Sydney, regional councils' marketing initiatives and international refugee relocation. Rural communities struggle in contrast with urban counterparts for several, often complex, reasons. The 'realities' of rural life are frequently marginalized while marketing campaigns evoke stereotypical imagery of idyllic lifestyles and bucolic pastures to sell dreams of country bliss to fatigued urbanites. This edited e-book is a collection of articles that explores 'rural realities' of country life in Australia for global audiences interested in rurality, health and well-being. By transcending disciplinary-specific boundaries, this multi-disciplinary book not only presents

contemporary challenges, but also equips readers with evidence-based knowledge to improve resilience in communities and individuals facing key issues such as aging, depression, disability, environmental degradation, limited service delivery and social isolation. Utilizing a variety of social science research methods, each chapter will enhance readers' insights about rural amenities, geography, identity, culture, health and governance which impact wellbeing and lifestyle satisfaction. Collectively, this book exposes readers to ideas from a dynamic range of experts in the humanities, social and natural sciences to encourage a holistic approach to developing solutions for a complex social world. The content of this volume will interest a wide audience of graduates and undergraduates, researchers, professional practitioners and policymakers involved with non-profit and government organizations, and interested community members.

central science ebook download: Recent Advances Towards Improved Phytoremediation of Heavy Metal Pollution David W.M. Leung, 2013-11-08 Heavy metal pollution represents a global challenge to both public health and environmental sustainability. Any means to reduce heavy metal pollution in the environment is of considerable economic significance. The use of green plants to clean up heavy metal pollution is an environmentally friendly as well as a low-cost approach to the problem. This plant-based biotechnology is commonly known as 'phytoremediation'. Presently, there is limited application of this technology because useful plants with enhanced heavy metal resistance/tolerance are still needed to assist remediation of environments polluted with heavy metals. A key to improved phytoremediation of heavy metal pollution lies in research seeking for a better understanding of the mechanism(s) of heavy metal resistance/tolerance in plants. This E-book presents a unique treatment of the topics that have never been comprehensively brought together before in a single advanced reference. The volume explores aspects of plant biology that are critical for employing phytoremediation techniques to combat heavy metal contamination such as the specific plant biology, seed biology, plant tissue culture and enzymology. This E-book will be a useful reference to plant biologists, biotechnologists and environmental engineers seeking information about phytoremediation of heavy metals from the environment.

central science ebook download: *Immunology of Pregnancy 2013* Gérard Chaouat, Olivier Sandra, Nathalie Lédée, 2013-11-08 Since a September, 1992, Nature article which read: "Can there

be life without LIF?”, researchers now realize that the maternal immune system is both a foe (it can reject the conception) and a friend (immune cells and molecules are also necessary for successful pregnancy). Leukemia Inhibitory Factor (LIF) when absent, prevents embryo implantation in rodents. From fecundation to parturition, immunity acts as a Janus, required but potentially dangerous. However, the complexity and the diversity of immunity in pregnancy deters many from entering the field. This book will try to give a complete overview of immunity from gametes till parturition, in brief, but with complete chapters and subsections, each written by specialists in the field. The importance of the topic relies not only on “the riddle of the fetal allograft”, which is per se fascinating, but on its consequences, linked to the development of IVF and in general, Assisted Reproductive Technologies (ART) / Medicine. Since the discovery that there would not be (mammalian) life without LIF, it has become clear that Immune Molecules, and in general, transient post mating inflammatory reactions are required for successful implantation. Disruptions of this process can lead to implantation failure / sterility. In later stages of pregnancy immunological cells, mostly of the innate immune system, control formation of local spiral arteries. Finally, a state of tolerance establishes itself, whose “break” leads to immune abortion and the vascular bed is further transformed and enlarged, till delivery, and here again “immunological cytokines” do play a major role and can eventually cause immune mediated abortion. Failure of, not just, the cytokine and cell recognition mediated dialogue, but also the pre and peri-implantation “preparation of the uterus”, as stated, leads to sterility, early pregnancy loss and recurrent abortions. There is also an increasingly stronger argument to implicate immunology in pre-eclampsia. Further still, immunology is also implicated in the control of local infection, mother to child transmission of pathogens (notably, but not limited to, HIV). Finally, pregnancy is the only known physiological phenomenon where the once named “suppressor T cells,” re-emerge as “regulatory T cells”, and play a cardinal role. This E-book provides a complete compendium of gynecological immunology, spanning from fecundation to delivery. Topics also include the role of various cell types (such as T regs ad NK cells) in implantation and uterine changes as well as the genetic regulation of immunological processes. As such it will be of interest not only to fundamental and reproductive immunologists, but more importantly, clinicians in obstetrics and gynecology.
