campbell biology ebook free: Microcompartmentation D.P. Jones, 2018-01-18

Microcompartmentation refers to nonhomogeneous distribution of solutes in compartments of cells or associated structures without intervening membranous barriers. Such variations in concentration of ions, metabolites, intracellular messengers, and nutrients can introduce significant heterogeneity in subcellular function and regulation. The current focus on biological examples of microcompartmentation provides ample evidence for its importance and the role of physical structure in determining local chemical environments. The examples present in the different chapters include microcompartmentation of Ca^{2+} , H^{+} , ATP, ADP, O_2 , glycolytic intermediates, fatty acids, amino acids, and nucleic acid precursors. In reviewing these systems, the authors provide a useful resource for experimental approaches to study microcompartmentation and provide the basis for future studies of its role in regulation of cell functions.

campbell biology ebook free: Calcium and Ion Channel Modulation A. D. Grinnell, 2012-12-06 Cellular neurobiology has been transformed in the past decade by new technologies and fundamental discoveries. One result is an enormous increase in our understanding of how ion channels function in nerve and muscle cells and a widening perspective on the role of ion channels in non-neuronal cell physiology and development. Patch clamp techniques now permit direct observation of the transitions between functional conformations of individual ion channels in their native membrane. Recombinant DNA techniques are being used to determine the primary structure of ion channel proteins and to test hypotheses about channel conformations, sites of gating and modulation, and the basis of ion selectivity. At the same time, biochemical techniques have revealed intricate signalling systems in these cells, involving second messengers such as calcium, phospholipids and cyclic nucleotides, which interface with the external milieu through GTP binding proteins and regulate cell metabolism by altering protein phosphorylation. This panorama of second messenger systems has greatly increased our appreciation for their potential role in regulating ion channel function. We now recognize that ion channels are much more complicated than we once thought, and more interesting. They are not simply isolated macromolecules in the membrane, gated directly by depolarization or transmitter binding to open briefly at a fixed conductance and then close or inactivate. Instead, individual channels now appear to have many open and closed states that are regulated independently by voltage and transmitters.

campbell biology ebook free: Biosemiotic Literary Criticism W. John Coletta, 2021-08-24

This volume is based to a large extent on the understanding of biosemiotic literary criticism as a semiotic-model-making enterprise. For Jurij Lotman and Thomas A. Sebeok, "nature writing is essentially a model of the relationship between humans and nature" (Timo Maran); biosemiotic literary criticism, itself a form of nature writing and thus itself an ecological-niche-making enterprise, will be considered to be a model of modeling, a model of nature naturing. Modes and models of analysis drawn from Thomas A. Sebeok and Marcel Danesi's *Forms of Meaning: Modeling Systems Theory and Semiotic Analysis* as well as from Timo Maran's work on "modeling the environment in literature," Edwina Taborsky's writing on Peircean semiosis, and, of course, Jesper Hoffmeyer's formative work in biosemiotics are among the most important organizing elements for this volume.
