Louis Bridges Jr., 2014-02-20 The third edition of this definitive and highly-regarded reference work provides a comprehensive review of vasculitis, a fascinating array of life-threatening and minor conditions caused by inflammatory syndromes and diseases that affect the blood vessels. The text uniquely brings together concepts from both the biological and clinical aspects of vasculitis. Research in clinical immunology now invigorates the entire area of vasculitis and shapes a rational approach to pathogenesis, diagnosis, and treatment, which is the substance of this text. Over 40 chapters cover known vasculitic conditions, and are illustrated with over 250 full-colour photographs of clinical and pathologic findings, diagrams, and tables. Separate sections are devoted to basic science, clinical manifestations commonly seen in vasculitis, imaging and percutaneous interventions, individual diseases and syndromes, as well as conditions which can mimic vasculitis. Many of the conditions are rare, and it is the exceptional clinician who has much experience with more than a few of these; thus, the invaluable experience of the international team of authors makes this edition truly indispensable. Now in the Oxford Textbooks in Rheumatology series, this new edition of Vasculitis is published with a concurrent online version, which features access to the full content of the textbook, contains links from the references to primary research journal articles, allows full text searches, and provides access to figures and tables that can be downloaded to PowerPoint. campbell biology focus ap version: *Plant and Fungal Extracts and Metabolites in Neurotherapy: Exploring Their Pharmacology and Potential Clinical Uses* Jian Hao, Igor Lavrov, Xianhu Zhou, 2025-05-29 Exploring phytochemistry and the treatment of neurological disorders, this research topic addresses CNS disorders like Alzheimer's and Parkinson's, which lack effective treatments. A key area of research in this context is plants used in traditional and local medical systems. The research topic merges ancient herbal traditions with modern science, aiming to develop groundbreaking treatments for debilitating CNS conditions. Plant and fungal metabolites known for their neuroprotective and anti-inflammatory properties, offer promising therapeutic strategies. Advances in understanding their molecular mechanisms could offer novel therapeutic options for treating such neurological disorders. Therefore this research topic explores the research themes linking ethnopharmacology and neuropharmacology. By integrating traditional knowledge with contemporary scientific techniques, studying plant and fungal extracts and individual metabolites could transform global treatment approaches for CNS disorders. We envision that these contributions will improve the treatment of central nervous system (CNS) disorders by harnessing the therapeutic potential of phytochemicals and that they will contribute to a better understanding of existing treatments using plant and fungal extracts. It addresses significant challenges posed by neurodegenerative diseases, traumatic injuries, and strokes, characterized by complex pathologies and limited effective treatments. By exploring the mechanisms, bioavailability, and safety profiles of such extracts and metabolites, along with potential synergies with existing therapies, this research seeks to bridge the gap between traditional and modern medical practices. Advances in analytical technologies, molecular biology, and clinical methodologies facilitate precise identification, isolation, and evaluation of these compounds. The initiative encourages collaborative research spanning molecular studies to clinical trials. This effort underscores the critical role of plant-derived compounds in neurotherapy and promotes their further exploration and application. The Research Topic encompasses exploring medicinal plants and fungi for the treatment of CNS disorders, conducting mechanistic studies on metabolites' interactions with the CNS, and clinical trials to evaluate the efficacy and safety of such preparations. These essential components aim to provide a comprehensive understanding of how plant-derived compounds can play a crucial role in Neurotherapy, paving the way for innovative treatments and improved outcomes for individuals
