Uniquely, this book includes critical reviews of diverse aspects of e-books (e.g., features) and e-book uses (e.g., independent reading) for early literacy as well as multiple examinations of e-books in home and school contexts using a variety of research methods and/or theoretical frames. The studies of children's engagement with diverse types of e-books in different social contexts provide readers with a contemporary and comprehensive understanding of this topic. Research has demonstrated that ever-increasing numbers of children use digital devices as part of their daily routine. Yet, despite

children s tales ebook: Children's Digital Picture Books Katherine Day, 2024-05-01 During the COVID-19 pandemic lockdowns, children's media use increased (Mesce et al. 2021) while a decrease in print-book reading was observed (Nolan et al. 2022). An increase in tablet use suggests that when children were reading, it was mostly online in the form of ePub3 pdf files for illustrated works and prescribed school texts, while smartphone use was linked to apps and games. (Susilowati et al. 2021) For many years now, children's publishers have experimented with digital picture-book formats but have regarded the genre as not suitable for digitisation. This book documents the findings of a one-year research project engaging the children's publishing sector for feedback on reading trends and digital publishing in picture-book genres. The research assesses the plight of picture books in the current climate and considers how picture-book publishers cater to diverse readerships and new reading platforms post Covid-19 lockdowns and into the digital age. Written by an academic and editor with over 15 years industry experience, this book offers a nuanced response to children's picture book publishing and reception for librarians, teachers, publishers and international scholars in the fields of publishing studies, library studies, early childhood studies, early education and childhood psychology.

Such rapid technological change has consequences for the development of early literacy, and the ways in which parents and educators are able to equip today's young citizens for a digital future. This seminal Handbook fulfils an urgent need to consider how digital technologies are impacting the lives and learning of young children; and how childhood experiences of using digital resources can serve as the foundation for

present and future development. Considering children aged 0–8 years, chapters explore the diversity of young children's literacy skills, practices and expertise across digital tools, technologies and media, in varied contexts, settings and countries. The Handbook explores six significant areas: Part I presents an overview of research into young children's digital literacy practices, touching on a range of theoretical, methodological and ethical approaches. Part II considers young children's reading, writing and meaning-making when using digital media at home and in the wider community. Part III offers an overview of key challenges for early childhood education presented by digital literacy, and discusses political positioning and curricula. Part IV focuses on the multimodal and multi-sensory textual landscape of contemporary literary practices, and how children learn to read and write with and across media. Part V considers how digital technologies both influence and are influenced by children's online and offline social relationships. Part VI draws together themes from across the Handbook, to propose an agenda for future research into digital literacies in early childhood. children s tales ebook: Digital Personalization in Early Childhood Natalia Kucirkova, 2017-09-07 Digital personalization is an emerging interdisciplinary research field, with application to a variety of areas including design, education and publication industry. This book focuses on children's education and literacy resources, which have undergone important changes with the 'personalization revolution' in the early 21st century. The author develops original insights from educational research and her own studies concerned with digital and non-digital personalization, to discuss in a clear and critical way the thinking, research issues and practical implications of this new field. She scrutinises the character of technology-based personalized education to substantiate the claim that the current models of personalized education tend to be technology- and business-driven, with little pedagogical understanding of the social value of personalization. Research involving touchscreens, personalized books and 2-8-year olds is interrogated for its impact on children's development of language, creativity, identity, as well as family dynamics and classroom dialogue. The literature available on digital and non-digital personalization is discussed in relation to five key themes of personalized education, the so-called 5As: autonomy, authorship, aesthetics, attachment and authenticity. It is argued that the 5As need to be anchored in humanist principles for a sustainable pedagogy and practice. Based on the insights from research with typically and atypically developing children, Kucirkova proposes personalised pluralisation, as a pedagogical framework of personalized education for the future. The book aims to help scholars and professionals understand the connections between personalization and literacy, personalization and education, and personalization and wider socio-moral issues.

children s tales ebook: Handbook of Empirical Literary Studies Donald Kuiken, Arthur M. Jacobs, 2021-09-20 This handbook reviews efforts to increase the use of empirical methods in studies of the aesthetic and social effects of literary reading. The reviewed research is expansive, including extension of familiar theoretical models to novel domains (e.g., educational settings); enlarging empirical efforts within under-represented research areas (e.g., child development); and broadening the range of applicable quantitative and qualitative methods (e.g., computational stylistics; phenomenological methods). Especially challenging is articulation of the subtle aesthetic and social effects of literary artefacts (e.g., poetry, film). Increasingly, the complexity of these effects is addressed in multi-variate studies, including confirmatory factor analysis and structural equation modeling. While each chapter touches upon the historical background of a specific research topic, two chapters address the area's historical background and guiding philosophical assumptions. Taken together, the material in this volume provides a systematic introduction to the area for early career professionals, while challenging active researchers to develop theoretical frameworks and empirical procedures that match the complexity of their research objectives.
