By expanding the metaphor of light within the Christian and Quaker traditions to include light's role in ecosystems, this project develops an ecotheology of light that aims to answer this question. Cherice Bock and Christy Randazzo draw on their contexts in the Religious Society of Friends, placing the Quaker Inward Light in dialogue with the Bible, and light in Eastern Orthodox, ecological, and interdependence theologies. The Quaker ecotheology of light developed argues that Light is a vitally important and mutually translatable metaphor providing a common language that can aid humanity, reinterpreting traditions to meet this moment with spiritual grounding to transition to a just and sustainable future for the Earth, our common home. Bock and Randazzo connect this ecotheology of light with implications for Friends testimonies.

campbell biology 12th edition access: *Beyond open access: visions for open evaluation of scientific papers by post-publication peer review* Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services: access and evaluation. The traditional publication system restricts the access to papers by requiring payment, and it restricts the evaluation of papers by relying on just 2-4 pre-publication peer reviews and by keeping the reviews secret. As a result, the current system suffers from a lack of quality and transparency of the peer-review evaluation process, and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in. Open access is now widely accepted as desirable and is slowly beginning to become a reality. However, the second essential element, evaluation, has received less attention. Open evaluation, an ongoing post-publication process of transparent peer review and rating of papers, promises to address the problems of the current system. However, it is unclear how exactly such a system should be designed. The evaluation system steers the attention of the scientific community and, thus, the very course of science. For better or worse, the most visible papers determine the direction of each field and guide funding and public policy decisions. Evaluation, therefore, is at the heart of the entire endeavor of science. As the number of scientific publications explodes, evaluation and selection will only gain importance. A grand challenge of our time, therefore, is to design the future system, by which we evaluate papers and decide which ones deserve broad attention. So far scientists have left the design of the evaluation process to journals and publishing companies. However, the steering mechanism of science should be designed by scientists. The cognitive, computational, and brain sciences are best prepared to take on this task, which will involve social and psychological considerations, software design, and modeling of the network of scientific papers and their interrelationships. This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation. Because critical arguments about the current system abound, these papers will focus on constructive ideas and comprehensive designs for open evaluation systems. Design decisions include: Should the reviews and ratings be entirely transparent, or should some aspects be kept secret? Should other information, such as paper downloads be included in the evaluation? How can scientific objectivity be strengthened and political motivations weakened in the future system? Should the system include signed and authenticated reviews and ratings? Should the evaluation be an ongoing process, such that promising papers are more deeply evaluated? How can we bring science and statistics to the evaluation process (e.g. should rating averages come with error bars)? How should the evaluative information about each paper (e.g. peer ratings) be combined to prioritize the literature? Should different individuals and organizations be able to define their own evaluation formulae (e.g. weighting ratings according to different criteria)? How can we efficiently transition toward the future system? Ideally, the future system will derive its authority from a scientific literature on community-based open evaluation. We hope that these papers will provide a starting point.

campbell biology 12th edition access: Economics as an Evolutionary Science Anna Sachko Gandolfi, 2018-02-06 Economics is traditionally taken to be the social science concerned with the production, consumption, exchange, and distribution of wealth and commodities. Economists carefully track the comings and goings of the human household, whether written small (microeconomics) or large (macroeconomics) and attempt to predict future patterns under different situations. However, in constructing their models of economic behavior, economists often lose sight of the actual characteristics and motivations of their human subjects. In consequence, they have found the goal of an explanatory and predictive science to be elusive. Economics as an Evolutionary Science reorients economics toward a more direct appreciation of human nature, with an emphasis on what we have learned from recent advances in evolutionary science. The authors integrate economics and evolution to produce a social science that is rigorous, internally coherent, testable, and consistent with the natural sciences. The authors suggest an expanded definition of fitness, as in Darwin's survival of the fittest, emphasizing not only the importance of reproduction and the quality

of offspring, but also the unique ability of humans to provide material wealth to their children. The book offers a coherent explanation for the recent decline in fertility, which is shown to be consistent with the evolutionary goal of maximizing genetic success. In addition, the authors demonstrate the relevance to economics of several core concepts derived from biologists, including the genetics of parent-offspring conflict, inclusive fitness theory, and the phenomena of R-selection and K-selection. The keystone of their presentation is a cogent critique of the traditional concept of utility. As the authors demonstrate, the concept can be modified to reflect the fundamental evolutionary principle whereby living things—including human beings—have been selected to behave in a manner that maximizes their genetic representation in future generations. Despite the extraordinary interest in applying evolutionary biology to other disciplines, *Economics as an Evolutionary Science* marks the first major attempt at a synthesis of biology and economics. Scholarly yet accessible, this volume offers unique and original perspectives on an entire discipline.

Arthur M. Cohen, Carrie B. Kisker, 2009-11-19 THE SHAPING OF AMERICAN HIGHER EDUCATION SECOND EDITION When the first edition of *The Shaping of American Higher Education* was published it was lauded for its historical perspective and in-depth coverage of current events that provided an authoritative, comprehensive account of the history of higher education in the United States. As in the first edition, this book tracks trends and important issues in eight key areas: student access, faculty professionalization, curricular expansion, institutional growth, governance, finance, research, and outcomes. Thoroughly revised and updated, the volume is filled with critical new data; recent information from specialized sources on faculty, student admissions, and management practices; and an entirely new section that explores privatization, corporatization, and accountability from the mid-1990s to the present. This second edition also includes end-of-chapter questions for guidance, reflection, and study. Cohen and Kisker do the nation's colleges and universities a much needed service by authoring this volume. The highly regarded histories of American higher education have become badly dated. They ignore the last quarter century when American higher education was transformed. This volume provides comprehensive information on that era. — Art Levine, president, Woodrow Wilson National Fellowship Foundation, and author, *When Hope and Fear Collide: A Portrait of Today's College Student* The second edition of *The Shaping of American Higher Education* is a treasure trove of information and insight. Cohen and Kisker provide us with astute and straightforward analysis and commentary on our past, present, and likely future. This book is invaluable to those seeking to go to the heart of the issues and challenges confronting higher education. — Judith S. Eaton, president, Council for Higher Education Accreditation Arthur Cohen and his collaborator have now updated his superb history of American higher education. It remains masterful, authoritative, comprehensive, and incisive, and guarantees that this work will stand as the classic required resource for all who want to understand where higher education came from and where it is going. The new material gives a wise and nuanced perspective on the current crisis-driven transformations of the higher education industry. — John Lombardi, president, Louisiana State University System *The Shaping of American Higher Education* is distinguished by its systematic approach, comprehensive coverage, and extensive treatment of the modern era, including the first years of the twenty-first century. In this second edition, Arthur Cohen and Carrie Kisker are especially adept at bringing historical perspective and a balanced viewpoint to controversial issues of the current era. — Roger L.
