campbell biology focus ebook: *Student-generated Digital Media in Science Education* Garry Hoban, Wendy Nielsen, Alyce Shepherd, 2015-07-03 This timely and innovative book encourages us to 'flip the classroom' and empower our students to become content creators. Through creating digital media, they will not only improve their communication skills, but also gain a deeper understanding of core scientific concepts. This book will inspire science academics and science teacher educators to design learning experiences that allow students to take control of their own learning, to generate media that will stimulate them to engage with, learn about, and become effective communicators of science. Professors Susan Jones and Brian F. Yates, Australian Learning and Teaching Council Discipline Scholars for Science Represents a giant leap forward in our understanding of how digital media can enrich not only the learning of science but also the professional learning of science teachers. Professor Tom Russell, Queen's University, Ontario, Canada This excellent edited collection brings together authors at the forefront of promoting media creation in science by children and young people. New media of all kinds are the most culturally significant forms in the lives of learners and the work in this book shows how they can move between home and school and provide new contexts for learning as well as an understanding of key concepts. Dr John Potter, London Knowledge Lab, Dept. of Culture, Communication and Media, University College London, UK Student-generated Digital Media in Science Education supports secondary school teachers, lecturers in universities and teacher educators in improving engagement and understanding in science by helping students unleash their enthusiasm for creating media within the science classroom. Written by pioneers who have been developing their ideas in students' media making over the last 10 years, it provides a theoretical background, case studies, and a wide range of assignments and assessment tasks designed to address the vital issue of disengagement amongst science learners. It showcases opportunities for learners to use the tools that they already own to design, make and explain science content with five digital media forms that build upon each other—podcasts, digital stories, slowmation, video and blended media. Each chapter provides advice for implementation and evidence of engagement as learners use digital tools to learn science content, develop communication skills, and create science explanations. A student team's music video animation of the Krebs cycle, a podcast on chemical reactions presented as commentary on a boxing match, a wiki page on an entry in the periodic table of elements, and an animation on vitamin D deficiency among hijab-wearing Muslim women are just some of the imaginative assignments demonstrated. Student-generated Digital Media in Science Education illuminates innovative ways to engage science learners with science content using contemporary digital technologies. It is a must-read text for all educators keen to effectively convey the excitement and wonder of science in the 21st century.

campbell biology focus ebook: *Ecosystems in the Era of Digital Innovation: Exploring the Transformational Impact of Pervasive Digital Technologies on Industrial-Age Business Contexts and Incumbent Firms* Fabian Nischak, 2020-12-02 The Internet's emergence has significantly changed how people, communities, and societies behave, interact, and live. Today, people are accustomed to fulfilling their needs by taking advantage of giant online places for, e.g.,

the exchange of goods, video streaming, or social interaction. A driving force within this powerful development is represented by the growing diffusion of digital technologies. Enabled by technological advances, nearly every artifact is or can be equipped with digital technologies. With the increasing digitization and hybridization of physical objects established innovation and value commercialization logics are brought into question. Recapitulating today's prominent players, such as Amazon, Facebook, Apple, etc., highlights the emergence of a new ecosystem philosophy in practice in which diverse third-party contributors are orchestrated via a digital platform and carefully considered in the core firms' innovation activities. To shed light on this complex phenomena, this dissertation explores, first, the ecosystem concept and its particular relation to information systems, second, investigates the specific situation of industrial-age manufacturing contexts characterized by a physical core product that cannot be digitally substituted and, third, focusses on the specific nature of digital platform ecosystems to distill respective dimensions and characteristics.

campbell biology focus ebook: Rethinking Education and Emancipation Nataša Lacković, Igor Cvejic, Predrag Krstić, Olga Nikolić, 2024-03-24 This edited collection responds to the contemporary need for deeper analysis and rethinking of the relation between education and emancipation in a world beset by social, digital, educational and ecological crises. Among the diverse interdisciplinary perspectives explored are: rethinking the Anthropocene in the time of environmental emergency, the concept of relational thinking as emancipatory practice and a more encompassing concept of relational pedagogy that includes questions about the environment and digitalisation, the notion of indoctrination from the perspective of political education, reconnecting with the body as a form of emancipatory education and how schools reproduce socio-cultural ideologies in synergy with material and visual culture. The book chapters also consider the role of social media, postcolonialism and feminism in understanding emancipatory education and a historical reception of John Dewey's ideas in other than Western contexts. This volume will be of interest to those seeking well-known as well as further and novel acquaintance with the philosophical and critical issues surrounding different forms and ideas of emancipation and/or/through education, including related practical propositions and examples. Educators, scholars in education, social justice, philosophy, sociology and curriculum developers will find this collection valuable in contemplating, practising and theorising the futures of emancipatory education across contexts and themes.

campbell biology focus ebook: [The Well-Trained Mind](#) Susan Wise Bauer, Jessie Wise, 2016-08-09 Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education—by doing it yourself. *The Well-Trained Mind* will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building blocks of information are absorbed through memorization and rules; the middle school "logic stage," in which the student begins to think more analytically; and the high-school "rhetoric stage," where the student learns to write and speak with force and originality. Using this theory as your model, you'll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in *The Well-Trained Mind* to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. *The Well-Trained Mind* will give you the tools you'll need to teach your child with confidence and success.
