campbell biology in focus pdf: Teacher Expertise in the Global South Jason Anderson, 2023-06-01 There are many expert teachers working in the global South and we can learn a great deal from them. Neither of these claims should be surprising, yet to date there has been almost no research conducted on expert teachers working in Southern contexts. Instead, the huge sums of money invested in attempting to improve teacher quality in the South have frequently been directed towards introducing exogenous practices or interventions that may be culturally inappropriate, practically infeasible and ultimately unsustainable – often failing as a result. In this pioneering book, Jason Anderson provides an authoritative overview of the practices, cognition and professionalism of expert teachers working in low-income contexts. By drawing upon both systematic reviews of teacher expertise and effectiveness research, and his own fieldwork in India, he argues that without an understanding of expert teachers working in all contexts worldwide, we cannot truly understand expertise itself.

campbell biology in focus pdf: Focus on Popillia japonica William D. Hutchison, David Held, Giselher Grabenweger, Giulia Torrini, Daniel A. Potter, 2025-03-14 Since the introduction of the Japanese beetle, *Popillia japonica* (Coleoptera: Scarabaeidae), to the United States in 1916, the pest has had a long history of range expansion, and is now established in at least 28 states. In 2014, *P. japonica* was found for the first time in continental Europe, with detections in northern Italy, and subsequently southern Switzerland. Most recently, a population was confirmed near Vancouver, British Columbia, Canada. Adult beetles are quite opportunistic and readily colonize and damage over 300 host plant species, ranging from field crops (maize, soybean), to horticultural crops (wine grapes, raspberry, apple), and ornamentals such as linden trees. The larval (grub) stage actively feeds on root tissue of several turf species, utilizing turf on golf courses, residential lawns, perennial meadows, and potentially turf growing within the trellis rows of vineyards and orchards. Thus, urban as well as agricultural regions can harbor infestations, facilitate spread, and thus trigger substantial insecticidal sprays to suppress populations. Because of the damage potential, the beetle has been designated a quarantine pest in some regions (e.g., California-U.S., and EU countries). In response to the risk to plant health in Europe, a collaborative international research group IPM *Popillia* was created with the aim to coordinate and facilitate research activities among multiple countries. Leaders from this group and the U.S. will serve as Guest Editors to encourage timely publication of research to accelerate our understanding of *P. japonica* biology and management. One of the challenges to effective management of *P. japonica* is that few – if any – soil-applied or foliar insecticides, labeled for larval and adult stages, respectively, are approved for use in some countries or are currently being reviewed by regulatory agencies. This is particularly true in several EU countries. As this pest continues to expand its range, it is imperative to investigate alternatives to chemical control. Moreover, an improved understanding of *P. japonica* biology, behavior, and

ecology is necessary to develop a solid foundation for future pest management programs. We believe this Research Topic will prove to be a valuable venue for publishing novel research on a variety of *P. japonica* research priorities in the near future. We look forward to new submissions in the topic areas highlighted below. Article types: This Research Topic welcomes several types of articles, including: original research, opinion, perspective, mini-review and review articles, that examine all aspects of *P. japonica* invasion ecology and management. Potential contributions include, but are not limited to: • Early detection, monitoring and spread rates of *P. japonica* larval, adult populations • Invasion biology and population ecology • Dispersal of *P. japonica* (human-aided, or natural) and pathways of pest introduction • Range expansion within the context of global climate change • Behavioral studies, chemical ecology of insect-plant interactions • Larval/adult feeding injury, measuring the impact on high-value crops • Novel integrated pest management (IPM) solutions with low environmental impact • Natural antagonists and biological control agents, and trophic interactions • Synergies between biological control and pest-resistant varieties • Novel genetic/genomics studies on *P. japonica*, or bacteria, entomopathogenic fungi, nematodes and other biological control agents • Environmental and non-target impacts of *P. japonica* damage and IPM alternatives • Economic assessment of *P. japonica* invasions and IPM solutions We are also pleased to have Dr. Daniel Potter, University of Kentucky (US), serve in an honorary role as Topic Coordinator, and offer advice to the project, via his 43 years of experience and knowledge of *P. japonica* biology and ecology.

campbell biology in focus pdf: Developing the Blue Economy Robert C. Brears, 2021-10-20 Traditionally, the ocean economy is viewed solely as a mechanism for economic growth. In this business-as-usual approach, large-scale industrial economies have developed the ocean economy through the exploitation of maritime and marine resources, often without consideration of how those activities impact the future health or productivity of those same resources. This has led to aquatic ecosystems being viewed and treated as limitless resources; the marine environment becoming a dumping ground for waste; overfishing diminishing fishing stocks; ocean habitats being degraded from coastal developments; sea-level rise impacting coastal communities and infrastructure; increasing ocean acidification; and the marginalisation of poor coastal communities. Recognising the failings of the traditional ocean economy, there is a transition underway around the world towards the Blue Economy. This concept moves beyond the business-as-usual approach with economic development and ocean health complementary to one another. In the Blue Economy, the environmental risks of and ecological degradation from economic activity are mitigated or significantly reduced. Therefore, economic activity is in balance with the long-term capacity of the ocean ecosystems to support this activity and remain healthy and resilient. This book will provide an overview of the various technologies used to promote cross-sectoral and multi-scalar collaboration, facilitate the integrated management of sectors and resources, foster partnerships between governments and industry, encourage R&D in new technologies in resource use and management, and scale-up innovative financing mechanisms in the development of a Blue Economy. Also, the book will contain in-depth case studies that illustrate how locations, of differing climates, lifestyles and income levels, have implemented technologies to facilitate the development of the Blue Economy. Developing the Blue Economy will provide an accessible resource for practitioners and researchers working in the field on the various innovative technologies being implemented around the world to create a Blue Economy.

campbell biology in focus pdf: Der unsichtbare Gorilla Christopher Chabris, Daniel Simons, 2011-04-11 Christopher Chabris und Daniel Simons wurden durch ihr Gorilla-Experiment weltberühmt: Sie ließen einen Mann im Gorillakostüm durch ein Basketballspiel laufen – und die Hälfte der Zuschauer nahm ihn überhaupt nicht wahr. Überall lässt sich diese Unaufmerksamkeitsblindheit beobachten: Polizisten gehen an schweren Unfällen vorbei. Hollywoodfilme wimmeln von Fehlern. Denn unsere Wahrnehmung funktioniert absolut selektiv. Die Autoren entlarven die Beschränktheit unserer Wahrnehmung, unserer Fähigkeit zu erinnern und unserer Auffassungsgabe. Vor allem aber zeigen sie, wie oft wir völlig unbegründet auf unsere Intuitionen vertrauen. Und wie wir unserem Bewusstsein doch noch auf die Sprünge helfen können.

campbell biology in focus pdf: Sex and World Peace Valerie M. Hudson, Mary Caprioli, Donna Lee Bowen, Rose McDermott, 2023-05-30 Sex and World Peace is a groundbreaking demonstration that the security of women is a vital factor in the occurrence of conflict and war, unsettling a wide range of assumptions in political and security discourse. Harnessing an immense amount of data, it relates microlevel violence against women and macrolevel state peacefulness across global settings. The authors find that the treatment of women informs human interaction at all levels of society. They call attention to the adverse effects on state security of sex-based inequities such as sex ratios favoring males, the practice of polygamy, and lax enforcement of national laws protecting women. Their research challenges conventional definitions of security and democracy and common understandings of the causes of world events. The book considers a range of ways to remedy these injustices, including top-down and bottom-up approaches to redressing violence against women and the lack of sex parity in decision-making. Advocating a state responsibility to protect women, the authors campaign against women's systemic insecurity, which threatens the security of all. Sex and World Peace has been a go-to book for instructors, advocates, and policy makers since its publication in 2012. Since then, there have been major changes in world affairs, including the #MeToo movement, as well as advances in both theoretical and empirical literature surrounding the subject. This second edition, which adds coauthors Rose McDermott and Donna Lee Bowen alongside Valerie M. Hudson and Mary Caprioli, revises and updates the book for a new generation. The book retains its foundational overview of the relationship between women's oppression and war, enhanced by fresh data and new material covering recent developments for global women's rights and analysis of additional examples of gender and conflict throughout the world.

campbell biology in focus pdf: Depression – Medien – Suizid Sebastian Scherr, 2015-08-07 Sebastian Scherr führt vor dem Hintergrund der zahlreichen Studien zum Werther-Effekt die theoretischen Überschneidungen der Modellvorstellung von Depression und Suizidalität in ein integratives handlungstheoretisches Modell im Medienkontext zusammen. Er überprüft dieses mithilfe empirischer Untersuchungen. Dabei spielen Depressionen, die individuelle Suizidalität sowie die Mediennutzung, Medienrezeption und Medienwahrnehmung eine zentrale Rolle. Die Studie zeigt: Suiziddarstellungen in den Medien haben nicht auf alle Rezipienten eine gleichförmige, schädliche Wirkung. Vielmehr ist ein komplexes Zusammenspiel aus spezifischer Medienzuwendung und individuellen Personenmerkmalen dafür verantwortlich, welchen Einfluss Medien auf die individuelle Suizidalität entfalten.

campbell biology in focus pdf: Essentials of Global Mental Health Samuel O. Okpaku, 2014-02-27 Mental illness accounts directly for 14% of the global burden of disease and significantly more indirectly, and recent reports recognise the need to expand and improve mental health delivery on a global basis, especially in low and middle income countries. campbell biology in focus pdf: The New Taxonomy Quentin D. Wheeler, 2008-04-09 A Fresh Look at Taxonomy The most fundamental of all biological sciences, taxonomy underpins any long term strategies for reconstructing the great tree of life or salvaging as much biodiversity as possible. Initiatives reinventing taxonomy for the Internet age are leading to a resurgence in this once declining discipline. In this volume we witness the emergence of cybertaxonomy, a convergence of descriptive taxonomy with information science and computer engineering. Featuring a new paradigm of international teamwork, The New Taxonomy presents a roadmap for confronting the biodiversity crisis. Some have seen the confusion of pattern and process that followed Huxley's 1940 The New Systematics as the beginning of decline for support of taxonomy. In this answer to Huxley, contemporary taxonomists reclaim the unique mission, goals and importance of taxonomy as an independent science.
