creature tracking ebook: Gaia's Web Karen Bakker, 2024-04-16 A riveting exploration of one of the most important dilemmas of our time: will digital technology accelerate environmental degradation, or could it play a role in ecological regeneration? At the uncanny edge of the scientific frontier, Gaia's Web explores the promise and pitfalls the Digital Age holds for the future of our planet. Instead of the Internet of Things, environmental scientist and tech entrepreneur Karen Bakker asks, why not consider the Internet of Living Things? At the surprising and inspiring confluence of our digital and ecological futures, Bakker explores how the tools of the Digital Age could be mobilized to address our most pressing environmental challenges, from climate change to biodiversity loss. Interspersed with ten elegiac, enigmatic parables, each of which is based on an existing technology, Gaia's Web evokes the conundrums we face as the World Wide Web intertwines with the Web of Life. A new generation of innovators is deploying digital technology to come to the aid of the planet, using spy satellites to track down environmental criminals, inviting animals to the Metaverse, and biohacking Frankenstein-like biobots as environmental sentinels. But will they end up doing more harm than good? In an engaging take on conservation technology, Bakker looks at the digital tech applications to environmental issues from predatory harvesting of environmental data to human bycatch and eco-surveillance capitalism. If we address these issues and mobilize digitally mediated forms of citizen science, she argues, digital tech could help reverse environmental harms and advance environmental sustainability. And in the process, Big Tech might be transformed for the better. With its uniquely broad scope—combining insights from computer science, ecology, engineering, environmental science, and environmental law—Gaia's Web introduces profoundly novel ways of addressing our most pressing environmental challenges—mitigating climate change, protecting endangered species—and creating new possibilities for ecological justice by empowering nonhumans to participate in environmental regulation.

creature tracking ebook: The Internet of Animals Deborah Lupton, 2023-03-07 'The internet is made of cats' is a half-jokingly made claim. Today, animals of all shapes and sizes inhabit our digital spaces, including companion animals, wildlife, feral animals and livestock. In this book, Deborah Lupton explores how digital technologies and datafication are changing our relationships with other animals. Playfully building on the concept of 'The Internet of Things', she discusses the complex feelings that have developed between people and animals through the use of digital devices, from social media to employing animal-like robots as companions and carers. The book brings together a range of perspectives, including those of sociology, cultural geography, environmental humanities, critical animal studies and internet studies, to consider how these new digital technologies are contributing to major changes in human-animal relationships at both the micropolitical and macropolitical levels. As Lupton shows, while digital devices and media have strengthened people's relationships to other creatures, these technologies can also objectify animals as things for human entertainment, therapy or economic exploitation. This original and engaging book will be of interest to scholars and students across the social sciences and humanities.
