What is Dakin's Solution?

Dakin's solution is a dilute sodium hypochlorite solution used primarily as an antiseptic for cleaning wounds. It is effective in reducing bacterial load, minimizing infection, and promoting healing in chronic wounds, ulcers, burns, and surgical sites. Dakin's solution is favored in medical and home care settings due to its cost-effectiveness and ease of preparation. Its mild antiseptic properties make it a trusted choice for wound management and infection control, especially when commercial antiseptics are unavailable or unsuitable.

History and Medical Importance of Dakin's Solution

The formula for Dakin's solution was developed during World War I by English chemist Henry Drysdale Dakin and French surgeon Alexis Carrel. Their goal was to create a safe, effective antiseptic for treating infected wounds on the battlefield. The solution's ability to cleanse wounds

3. Add ½ teaspoon (2.5 mL) of baking soda to the cooled, boiled water. Stir until dissolved.
4. Add 2 tablespoons (30 mL) of household bleach (unscented, plain, 5.25%–6% sodium hypochlorite).
5. Mix the solution gently until fully blended.
6. Pour the finished solution into a clean, airtight, light-resistant container (such as an amber glass bottle).

In other words, in just a few years the U.S. will owe twice as much as it produces.
