educational game walkthroughs: Teaching Games and Game Studies in the Literature Classroom Tison Pugh, Lynn Ramey, 2022-09-22 Teaching Games and Game Studies in the Literature Classroom offers practical suggestions for educators looking to incorporate ludic media, ranging from novels to video games and from poems to board games, into their curricula. Across the globe, video games and interactive media have already been granted their own departments at numerous larger institutions and will increasingly fall under the purview of language and literature departments at smaller schools. This volume considers fundamental ways in which literature can be construed as a game and the benefits of such an approach. The contributors outline pedagogical strategies for integrating the study of video games with the study of literature and consider the intersections of identity and ideology as they relate to literature and ludology. They also address the benefits (and liabilities) of making the process of learning itself a game, an approach that is quickly gaining currency and increasing interest. Every chapter is grounded in theory but focuses on practical applications to develop students' critical thinking skills and intercultural competence through both digital and analog gameful approaches.

educational game walkthroughs: The Ecology of Games Katie Salen Tekinbas, 2007-11-30 An exploration of games as systems in which young people participate as gamers, producers, and learners. In the many studies of games and young people's use of them, little has been written about an overall “ecology” of gaming, game design and play—mapping the ways that all the various elements, from coding to social practices to aesthetics, coexist in the game world. This volume looks at games as systems in which young users participate, as gamers, producers, and learners. The Ecology of Games (edited by Rules of Play author Katie Salen) aims to expand upon and add nuance to the debate over the value of games—which so far has been vociferous but overly polemical and surprisingly shallow. Game play is credited with fostering new forms of social organization and new ways of thinking and interacting; the contributors work to situate this within a dynamic media ecology that has the participatory nature of gaming at its core. They look at the ways in which youth are empowered through their participation in the creation, uptake, and revision of games; emergent gaming literacies, including modding, world-building, and learning how to navigate a complex system; and how games act as points of departure for other forms of knowledge, literacy, and social organization.
