educationbluesky strategies: *Learning That Sticks* Bryan Goodwin, Tonia Gibson, Kristin Rouleau, 2020-06-05 In far too many classrooms, the emphasis is on instructional strategies that teachers employ rather than on what students should be doing or thinking about as part of their learning. What's more, students' minds are something of a mysterious black box for most teachers, so when learning breaks down, they're not sure what went wrong or what to do differently to help students learn. It doesn't have to be this way. *Learning That Sticks* helps you look inside that black box. Bryan Goodwin and his coauthors unpack the cognitive science underlying research-supported learning strategies so you can sequence them into experiences that challenge, inspire, and engage your students. As a result, you'll learn to teach with more intentionality—understanding not just what to do but also when and why to do it. By way of an easy-to-use six-phase model of learning, this book * Analyzes how the brain reacts to, stores, and retrieves new information. * Helps you zoom out to understand the process of learning from beginning to end. * Helps you zoom in to see what's going on in students' minds during each phase. Learning may be complicated, but learning about learning doesn't have to be. And to that end, *Learning That Sticks* helps shine a light into all the black boxes in your classroom and make your practice the most powerful it can be. This product is a copublication of ASCD and McREL.

Strong, 2007-10-15 Are you looking for high-impact, research-based strategies to transform your students into high-achieving and inspired learners? In *The Strategic Teacher*, you'll find a repertoire of strategies designed and proven to meet today's high standards and reach diverse learners. Twenty reliable, flexible strategies (along with dozens of variations) are organized into these groups of instruction: *mastery style to emphasize the development of student memory; *understanding style to expand students' capacities to reason and explain; *self-expressive style to stimulate and nourish students' imaginations and creativity; *interpersonal style to help students find meaning in the relationships they forge as partners and team members, united in the act of learning; and *four-style strategies that integrate all four styles. To guide teachers in delivering content to students, the authors started with the best research-based teaching and learning strategies and created a tool called the Strategic Dashboard. The dashboard provides information about each teaching strategy in a concise, visual profile; it is also designed to document how you incorporate current, highly respected research into your instructional plans. For each strategy, you'll find the following information: *a brief introduction to the strategy; *an example of a teacher using the strategy in the classroom; *the research base supporting the strategy and how the strategy benefits students; *how to implement the strategy using a list of clear steps; *guidance through the planning process, providing steps, examples, and suggestions for designing superior lessons; and *additional tools, strategies, and resources for adapting and expanding the use of each strategy. educationbluesky strategies: Breaking the Learning Barrier for Underachieving Students George D. Nelson, 2005-11-02 Make a breakthrough with underachieving and at-risk students! Little compares to the thrill of seeing a young mind come alive with wonder. But despite the best efforts, there are always students who seem unreachable, unteachable. So what can educators do to make learning fun and rewarding for all students? *Breaking the Learning Barrier for Underachieving Students* provides a strong theoretical understanding of learning styles, focusing on at-risk, or dramatic learners and why traditional teaching methods fail to meet their educational needs. Offering innovative yet practical teaching strategies, disciplinary policies, and lesson plans designed to engage even the most reluctant learners, Nelson demonstrates the importance of the principles that guide his groundbreaking work with at-risk students: Learning requires active involvement, participation, and effort from the learner. Learners need dramatic elements to gain meaning and inspiration. Teachers must consider the values and preferences of the learner. Learning must be fun.

Using Nelson's classroom-tested strategies to modify existing lessons and the learning environment so that these conditions are met, you will be amazed by the progress you can make with every student in your classroom!

educationbluesky strategies: No Failing Students Diane Hunt, 2014-12-19 When problem-students meet a teacher with a plan everyone can have a happy outcome... The atmosphere in the classroom was toxic. It was a mixture of regular students, special needs students and a couple of 'professional troublemakers' that wore ankle bracelets But it wasn't the 'ankle bracelet students' that were causing the problem... There were three specific students in the 'center of the storm'. Yes ... These three kids have been a problem since the beginning of the year... we might need to have them take summer school Said the Vice-Principal when I asked him why these particular kids were having such a difficult time. But you see, this was not my first teaching position. And I wasn't going to let that happen... I implemented the 'No Failings Students' teaching method in this class. And sure, there were some objections at first, But as the weeks went by, there was less fighting... Fewer airplanes whizzing by. And less failing grades. But what made the biggest impact was that the atmosphere in the classroom changed completely. It wasn't just these three kids that were 'saved', it was the entire class. Here's what you'll discover in No Failing Students... -Seven well organized proven student success strategies for immediate implementation for maximum achievement with elementary school, middle school, and high school students. -Detailed examples of how to identify vocabulary that is essential for students learning and success in your classroom. -An easy proven

way to identify which students will struggle with your content so you can give assistance immediately to reach and meet the needs of every learner in your classroom. -Clever Ideas for using learning styles and strategies without compromising academic rigor. -A time-saving plan for re-designing practice work using active learning, higher order thinking skills and learning styles in education for every grade level in every subject area. There is no need to give up your personal life to have successful students. -Assessment formats that can be adapted by any teacher to increase a student's confidence and success on assessments yet save you hours of time. -Professional development for educators to identify and eliminate practices that cause students to fail. The most important benefit of this book is that in a short period of time you can move students from failure to involved, confident, successful, happy learners.
