database systems third edition online: **On the Move to Meaningful Internet Systems 2004: CoopIS, DOA, and ODBASE** Zahir Tari, 2004-10-14 sers: GADA, MOIS, WOSE, and INTEROP. We trust that their audiences will mutually productively and happily mingle with those of the main conferences. A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young post-doc researchers organized an original set-up and formula to bring PhD students together and allow them to submit their research proposals for selection. A limited number of the submissions and their approaches will be independently evaluated by a panel of senior experts at the conference, and presented by the students in front of a wider audience. These students also got free access to all other parts of the OTM program, and only paid a heavily discounted fee for the Doctoral Symposium itself (in fact their attendance is largely sponsored by the other participants!). If evaluated as successful, it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum. All three main conferences and the associated workshops share the distributed aspects of modern computing systems, and the resulting application-pull created by the Internet and the so-called Semantic Web.

Authors of workshop papers were invited to submit extended versions of their papers for publication in these post-workshop proceedings. The 13 papers appearing in this volume were submitted and selected after a second round of reviews. We would like to thank the program committee of WebDB'98, all those who submitted their work, all additional reviewers, and the conference officials of EBDT'98 for their invaluable support. Special thanks go to Paolo Meriardo, who actively participated in the organization of the workshop.
