enciso family tree: *Converso Non-Conformism in Early Modern Spain* Kevin Ingram, 2018-12-06 This book examines the effects of Jewish conversions to Christianity in late medieval Spanish society. Ingram focuses on these converts and their descendants (known as conversos) not as Judaizers, but as Christian humanists, mystics and evangelists, who attempt to create a new society based on quietist religious practice, merit, and toleration. His narrative takes the reader on a journey from the late fourteenth-century conversions and the first blood purity laws (designed to marginalize conversos), through the early sixteenth-century Erasmian and radical mystical movements, to a Counter-Reformation environment in which conversos become the advocates for pacifism and concordance. His account ends at the court of Philip IV, where growing intolerance towards Madrid's converso courtiers is subtly attacked by Spain's greatest painter, Diego Velázquez, in his work, *Los Borrachos*. Finally, Ingram examines the historiography of early modern Spain, in which he argues the converso reform phenomenon continues to be underexplored.

enciso family tree: *A History of Literacy Education* Robert J. Tierney, P. David Pearson, 2021 In this volume, two notable scholars trace the monumental shifts in theory, research, and

practice related to reading education and literacy, with particular attention to what they consider the central goal of literacy—making meaning. Each section describes a specific epoch, including a brief snapshot of how the reader of that period is envisioned and characterized by researchers and teachers, as well as a deep discussion of the ideas and contextual events of that era. These developmental waves are organized in rough historical sequence by a series of shifts in underlying theoretical and scholarly lenses—from the behavioral to the psycholinguistic to the cognitive to the sociocultural to the critical to the multimodal to the global. The book closes with a discussion of the various research frames and methodological approaches that paralleled these developments. Throughout, there is a profound recognition that all research and practice are ultimately directed toward how students make meaning, from sound to letter to word, to ideas and images. Book Features: Animates some of the revolutionary developments related to reading education and literacy in modern times. Each development is accompanied by a discussion of the aspirational reader that sets the stage for contemplating these shifts and their significance. Traces the research and theoretical developments to illustrate the origins of the shifts and their influences. Supported by a website with video lectures and conversations tied to the various waves of development.

enciso family tree: Research Advances on Forest Tree Functional Genomics and Breeding , 2025-01-17 Forest trees play a key role in terrestrial biodiversity and contribute to carbon sequestration. Forest trees also exhibit a rich array of agronomic and economic traits, making them ideal as important species for studying functional genes for the unique characteristics of forest tree species. Fast-growing forest plantations are sustainable feedstocks of plant biomass that can serve as substitutes for fossil carbon resources for materials, chemicals, and energy. The first annotated whole genome sequence of the model woody plant, *Populus trichocarpa*, was published in 2006. Since then, many forest tree species have been sequenced and annotated, which has facilitated the development of functional genomics, GWAS, genetic tools, and new biotechnologies in tree research. Targeted functional genomics allows us to identify genes that affect traits of interest, such as agronomic and economic traits, wood properties, and biotic stress resistance. Molecular biology-based biotechnologies allow us to manipulate these genes and traits. The breakthroughs in biotechnology approaches, together with accelerated genomic breeding, will be crucial for the functional revealing of important genes for key traits and the development of a new generation of woody crops, helping us to keep up with the growing demand for wood fiber and other bioproducts from forest trees. This Research Topic aims to explore the molecular mechanisms of key biological processes in model and non-model forest tree species with a combination of approaches of genetics, omics, and chemistry. Also, new technologies and resources used for forest tree species research are of equal importance to basic science. We encourage fundamental research in the field of forest tree genomics, genetic studies in revealing the genes and pathways associated with key agronomic and economic traits in forest trees, molecular mechanisms of secondary growth regulation in tree species, and the potential utilization of biotechnologies in genetic improvement of woody crops. We welcome all types of submissions, including original research, reviews, methodologies, mini-reviews, perspectives, and opinion articles in this field, including (but not limited to) research covering:

- Genetic and functional characterization of genes regulating perennial tree secondary growth.
- Genetic improvement in woody tree crops using gene editing and other modern biotechnologies.
- Discovery, characterization, and application of germplasm resources with agronomic and economic traits.
- New technologies and resources for forest tree research.

enciso family tree: *Old Worlds, New Worlds* Lisa Kaaren Bailey, Lindsay Diggelmann, Kim M. Phillips, 2009 Pre-modern European history is replete with moments of encounter. At the end of arduous sea and land journeys, and en route, Europeans met people who challenged their

assumptions and certainties about the world. Some sought riches, others allies; some looked for Christian converts and some aimed for conquest. Others experienced the forced cultural encounter of exile. Many travelled only in imagination, forming ideas which have become foundational to modern mentalities: race, ethnicity, nation, and the nature of humanity. The consequences were profound: both productive and destructive. At the beginning of the third millennium CE we occupy a world shaped by those centuries of travel and encounter. This collection examines key themes and moments in European cultural expansion. Unlike many studies it spans both the medieval and early modern periods, challenging the stereotype of the post-Columbus 'age of discovery'. There is room too for examining cross-cultural relationships within Europe and regions closely linked to it, to show that curiosity, conflict and transformation could result from such meetings as they did in more far-flung realms. Several essays deal with authors, events, and ideas which will be unfamiliar to most readers but which deserve greater attention in the history of encounter and exploration.

enciso family tree: *Voices from the Ancestors* Lara Medina, Martha R. Gonzales, 2019-10-08 *Voices from the Ancestors* brings together the reflective writings and spiritual practices of Xicanx, Latinx, and Afro-Latinx womxn and male allies in the United States who seek to heal from the historical traumas of colonization by returning to ancestral traditions and knowledge. This wisdom is based on the authors' oral traditions, research, intuitions, and lived experiences—wisdom inspired by, and created from, personal trajectories on the path to spiritual *conocimiento*, or inner spiritual inquiry. This *conocimiento* has reemerged over the last fifty years as efforts to decolonize lives, minds, spirits, and bodies have advanced. Yet this knowledge goes back many generations to the time when the ancestors understood their interconnectedness with each other, with nature, and with the sacred cosmic forces—a time when the human body was a microcosm of the universe. Reclaiming and reconstructing spirituality based on non-Western epistemologies is central to the process of decolonization, particularly in these fraught times. The wisdom offered here appears in a variety of forms—in reflective essays, poetry, prayers, specific guidelines for healing practices, communal rituals, and visual art, all meant to address life transitions and how to live holistically and with a spiritual consciousness for the challenges of the twenty-first century.

enciso family tree: **Low Intensity Breeding of Native Forest Trees in Argentina** Mario J. Pastorino, Paula Marchelli, 2020-11-18 Global climate change requires the development of programs that consider the active restoration of degraded forests and the use of native trees in afforestation to preserve the natural environment. International commitments like the UN REDD program, the Montréal Process and the Convention on Biological Diversity call for the breeding of species rarely contemplated by large industrial companies. Low-intensity breeding is the most rational strategy for those species: simple but robust, and not dependent on continuously increasing funding, and therefore effective even with a relatively small budget. It commonly focuses on high genetic diversity rather than improving economic traits and adaptability rather than productivity. Controlled crosses with full pedigrees typical of high-intensity breeding are replaced by open pollination. This book presents state-of-the-art breeding strategies from the last two decades for several forest tree species of prime importance in the natural forests of Argentina. They are distributed in the three main forestry ecoregions of the country: the subtropical dry forest (Chaco), the subtropical rain forests (Yungas and Alto Paraná rainforests) and the temperate forests of Patagonia. The book also discusses the genetic patterns of the selected species defined using genetic markers together with the analysis of the variation in quantitative traits. Further, it examines the crucial features of their reproductive biology, such as the mating system and gene flow and describes the current breeding programs. Lastly, it presents the latest developments in genetic resources and their emerging applications, concluding with some reflections and perspectives related to the conditioning imposed by climate change.

It discusses the empirical research methods and findings, as well as practical initiatives and projects being pursued in Mexico and other countries in the region.

Although a number of Mexican universities are now conducting high-quality research on matters related to sustainable development, there are few publications that offer a multidisciplinary overview of research efforts for a broader audience. This book addresses that gap in the literature, providing researchers at Mexican universities – including those from other countries working in Mexico – with an opportunity to present their work, i.e. curriculum innovations, empirical work, activities, case studies, and practical projects. As such, it fosters the exchange of information, ideas and experiences, successful initiatives and best practices.
