**endless runner unblocked: Leadership Unblocked** Muriel M. Wilkins, 2025-10-28 Your mindset may be the only thing standing between you and your potential. Break free from the beliefs that hold you back. As a leader, do you find yourself frustrated, wondering why employees don't meet expectations, peers are slow to act, or pressure from your boss falls unfairly on your shoulders? It's easy to point a finger at others and double down on getting results. But have you ever considered that the problem might not be them—that it might be you? Through countless hours coaching executives over the past twenty years, C-suite adviser Muriel M. Wilkins has pinpointed the biggest reason behind these common leadership challenges: hidden blockers. These unconscious beliefs can actively stall progress if leaders aren't aware of their existence, preventing them from seeing a situation clearly, solving problems effectively, and advancing their careers. In *Leadership Unblocked*, Wilkins reveals seven key beliefs that hold leaders back, from I know I'm right to I need to be involved to I don't belong here. Combining illustrative and powerful coaching conversations and research from the fields of neuroscience, leadership, and adult development theory, Wilkins offers a self-coaching guide for identifying, unpacking, and breaking through these barriers. By using the practical advice in this book, leaders and aspiring leaders alike can cultivate the mindset to achieve their goals and finally become the leaders they want to be.

**endless runner unblocked:** *People's Republic of Neverland* Robb Johnson, 2020-10-01 There once was a time when teachers and communities were able to exercise democratic control over their schools. Now that power has been taken away, both centralised and privatised, under the guise of "reform." There is a forgotten history of the time before reform, and within it a bright horizon is visible, reachable only if educators and society at large can learn the lessons of the past. Robb Johnson entered the classroom as a new teacher in the 1980s and has spent a lifetime alongside his pupils encouraging both creativity and a healthy distrust of authority. This book is both memoir and polemic, a celebration of children's innate desire to learn, share, cooperate, and play, as well as a critique of bureaucratic interference. Johnson details how we ended up with the contemporary mass education systems and why they continually fail to give children what they need. Combining practical experience as a teacher with detailed pedagogical knowledge, and a characteristic playful style, Johnson is both court chronicler and jester, imparting information and creatively admonishing the self-important figureheads of the reform agenda. This book considers how schools and education relate to the wider society in which they are located and how they relate to the particular needs and abilities of the people who experience them. It shows that schools and education are contested spaces that need to be reclaimed from the state, and turned into places where people can grow, not up, not old, but as individuals. It offers alternative ways of running classrooms, schools, and perhaps even society.

**endless runner unblocked:** Raspberry Pi 5 System Administration Basics Robert M. Koretsky, 2025-11-11 This book covers Raspberry Pi 5 OS concepts and commands that allow a beginner to perform essential system administration and other operations. This is a mandatory set of commands that even an ordinary, non-administrative user would need to know to work efficiently in a character text-based interface (CUI) or in a graphical interface (GUI) to the operating system. Each chapter contains sequential, in-line exercises that reinforce the material that comes before them. The code for the book and solutions to the in-chapter exercises can be found at the following link: [www.github.com/bobk48/Raspberry-Pi-5-OS](https://www.github.com/bobk48/Raspberry-Pi-5-OS). The first introductory chapter illustrates a basic set of text-based commands which are the predominant means that a system administrator uses to maintain the integrity of the system. User account control is an example of the fundamental integrity aspect of administration, requiring the addition of users and groups while maintaining secure access. Storage solutions involve integrating persistent media such as USB3 SSDs and NVMe drives, ensuring proper file system classification based on physical or virtual media, including NFSv4 and iSCSI setups. The second chapter, which is the core of the book, covers many critical and pertinent system administration commands and facilities. For example, how to attach additional media to the Raspberry Pi 5 and how to install and boot the Raspberry Pi 5 from an NVMe SSD, rather than from the traditional microSD card medium. This chapter also covers many advanced topics to expand the beginner's knowledge of system maintenance and control. The third chapter shows how system administration is streamlined with systemd, which allows efficient service management. The systemd superkernel is a powerful initialization and service management framework that has revolutionized Linux system administration. It introduces a structured approach to system control through sub-commands and applications, enhancing system efficiency. At its core, systemd units and unit

files serve as essential building blocks, defining system behavior. The fourth chapter gives a basic introduction to the Python 3 programming language, with a complete explication of the syntax of the language, and many illustrative examples.
