gizmo learning resources: *Toward a New Era of Learning: Untangling Our Next Public Education* Wilson Winnitoy, 2015-05-07 What will our next public education system and its schools be like? It is a good question, but not one, unfortunately, that is on everyone's mind, at least not for now. We are too busy trying to fix the system we have, too busy to look ahead. We do not have to look very far. Our next public education system, and its new approach to learning, is already revealing itself. It is visible in the pressures from parents and their ceaseless efforts to influence profoundly the quality of the experience their children have in school. It is visible in the creative efforts of many dedicated teachers and school administrators as they surmount, day after day, the dehumanizing tendencies of large-scale mass education. This book is a look into the future. We must rethink the meaning of the values and beliefs that drove the creation of the public schools over 100 years ago. We must translate them into a new kind of learning that responds to the challenges and opportunities of our time and place in history.

gizmo learning resources: Distance Learning for Elementary STEM

Amanda Thomas, 2021-02-17 This practical guide outlines a vision for online and distance STEM learning at the elementary level, with creative activities based on eight STEM themes. Online and distance learning may sound fairly straightforward. Instead of learning in a classroom setting, students learn at home with the assistance of online resources. But classroom learning does not always translate easily to online settings, particularly at the elementary level where children should be actively engaging in activities, exploration and discussion. From designing a zoo, to learning to garden, to exploring the night sky, you'll find eight STEM lessons that are creative, hands-on and engaging for elementary learners. Written for teachers and parents, the book unpacks STEM integration across multiple subjects, with connections to the ISTE Standards. The book also includes play-based lessons for young learners, and ideas for innovative design challenges. Each of the eight lessons includes: An overview of materials, resources, time and supervision needed. Suggested resources to explore, such as simulations and virtual field trips. Supplementary learning materials such as questions and quizzes. Ideas for games and reinforcement. Hands-on activities and engineering design challenges. Connections to various content areas as well as children's books, movies and art to keep the learning going after the lesson is completed. Concluding with a model for designing online and distance STEM learning for elementary-aged children, this book will support teachers and parents in designing the types of resources and learning experiences they need for elementary students' distance learning. Audience: K-5 teachers and parents

gizmo learning resources: *Rhetorics and Technologies* Stuart A. Selber, 2012-12-05 Electric discussions of the interplay between technological innovation and communication Recognizing an increasingly technological context for rhetorical activity, the thirteen contributors to this volume illuminate the challenges and opportunities inherent in successfully navigating intersections between rhetoric and technology in existing and emergent literacy practices. Edited by Stuart A. Selber, *Rhetorics and Technologies* positions technology as an inevitable aspect of the rhetorical situation and as a potent force in writing and communication activities. Taking a broad approach, this volume is not limited to discussion of particular technological systems (such as new media or wikis) or rhetorical contexts (such as invention or ethics). The essays instead offer a comprehensive treatment of the rhetoric-technology nexus. The book's first section considers the ways in which the social and material realities of using technology to support writing and communication activities have altered the borders and boundaries of rhetorical studies. The second section explores the discourse practices employed by users, designers, and scholars of technology

when communicating in technological contexts. In the final section, projects and endeavors that illuminate the ways in which discourse activities can evolve to reflect emerging sociopolitical realities, technologies, and educational issues are examined. The resulting text bridges past and future by offering new understandings of traditional canons of rhetoric—invention, arrangement, style, memory, and delivery—as they present themselves in technological contexts without discarding the rich history of the field before the advent of these technological innovations. *Rhetorics and Technologies* includes a foreword by Carolyn R. Miller and essays by John M. Carroll, Marilyn M. Cooper, Paul Heilker, Johndan Johnson-Eilola, Debra Journet, M. Jimmie Killingsworth, Jason King, James E. Porter, Stuart A. Selber, Geoffrey Sirc, Susan Wells, and Anne Frances Wysocki.

gizmo learning resources: [Orchestrating Supply Chain Opportunities](#) Ananth Iyer, 2011-04-15
Efficient planning and superior execution against clear objectives is the way companies operate best. For many companies, the planning process is carefully orchestrated, objectives are set, budgets are negotiated, resources are allocated, and then it's up to the organization to execute. But what happens when the unexpected occurs? Say, an event occurs that throws the status quo into turmoil. What if your business declines by 40% in 1 month, what do you do? Conversely, what if your demand spikes by 50% in just a few months, what then? Suppose a natural disaster happens, or a new technology creates a significant, but unplanned opportunity? We call these events 'stretch opportunities'. This book will focus on strategic thinking and tactical examples of how best to prepare for such events. We will outline common themes across all such challenges. We will introduce three key management concepts: Flexibility, Agility and Real Options. We also include a specific chapter on how to structure supply chains to capitalize on stretch opportunities and we provide specific tactical frameworks to build in agility, flexibility and real options into a supply chain. We will end with a checklist that managers can use to ensure that the right questions are asked in developing supply chains so that the ability to surge at profitable opportunities is nourished.
