free clinical research ebook: Digital Healing Marc Ringel, 2018-06-14 Medical practice and research are inconceivable today without electronic computing and communication tools. Digital machines do many tasks orders-of-magnitude better, faster and more accurately than humans. Still, there are functions critical to the healthcare endeavor that people do much better than machines, things like: understanding and using natural language; perceiving what is unexpressed; taking into account values, culture, ethics, and human relationships; touching and healing. For the foreseeable future, the smartest computers will be no match for human beings when it comes to performing these most anthropic functions. American healthcare is at a critical juncture. Providers and patients are increasingly frustrated by degradation of the human relationships that lie at the core of the medical practice. Technologies, such as the computerized medical record, get much of the blame for intrusion into the patient-provider relationship. However, it is not technology itself that is to blame. The fault lies with how systems are conceived, designed, and deployed. This book analyzes how to organize the work of healthcare in a way that uses machines to do what they do best, thereby freeing humans to do what we do best. Smart use of electronic technology is crucial to the success of any bid to fulfill the Institute for Healthcare Improvement's triple aim to make healthcare more effective, efficient, and humane.

free clinical research ebook: Health Data Pools Under European Data Protection and Competition Law Giulia Schneider, 2022-04-13 This book explores the emerging economic reality of health data pools from the perspective of European Union policy and law. The contractual sharing of health data for research purposes is giving rise to a free movement of research data, which is strongly encouraged at European policy level within the Digital Single Market Strategy. However, it has also a strong impact on data subjects' fundamental right to data protection and smaller businesses and research entities ability to carry out research and compete in innovation markets. Accordingly the work questions under which conditions health data sharing is lawful under European data protection and competition law. For these purposes, the work addresses the following sub-questions: i) which is the emerging innovation paradigm in digital health research?; ii) how are health data pools addressed at European policy level?; iii) do European data protection and competition law promote health data-driven innovation objectives, and how?; iv) which are the limits posed by the two frameworks to the free pooling of health data? The underlying assumption of the work is that both branches of European Union law are key regulatory tools for the creation of a common European health data space as envisaged in the Commissions 2020 European strategy for data. It thus demonstrates that both European data protection law, as defined under the General Data Protection Regulation, and European competition law and policy set research enabling regimes regarding health data, provided specific normative conditions are met. From a further perspective, both regulatory frameworks place external limits to the freedom to share (or not share) research valuable data.

free clinical research ebook: Digital Personalized Health and Medicine L.B. Pape-Haugaard, C. Lovis, I. Cort Madsen, 2020-06-17 Digital health and medical informatics have grown in importance in recent years, and have now become central to the provision of effective healthcare around the world. This book presents the proceedings of the 30th Medical Informatics Europe conference (MIE). This edition of the conference, hosted by the European Federation for Medical Informatics (EFMI) since the 1970s, was due to be held in Geneva, Switzerland in April 2020, but as a result of measures to prevent the spread of the Covid19 pandemic, the conference itself had to be cancelled. Nevertheless, because this collection of papers offers a wealth of knowledge and experience across the full spectrum of digital health and medicine, it was decided to publish the submissions accepted in the review process and confirmed by the Scientific Program Committee for publication, and these are published here as planned. The 232 papers are themed under 6 section headings: biomedical data, tools and methods; supporting care delivery; health and prevention; precision medicine and public health; human factors and citizen centered digital health; and ethics, legal and societal aspects. A 7th section deals with the Swiss personalized health network, and section 8 includes the 125 posters accepted for the conference. Offering an overview of current trends and developments in digital health and medical informatics, the book provides a valuable information resource for researchers and health practitioners alike.
