free grade 4 math ebook: Digital Content Creation in Schools Karen S. Ivers, Ann E. Barron, 2014-12-17 Discover how digital content creation supports 21st-century learning, providing new insights into organizing, synthesizing, and evaluating information. This practical guide will make it easy for you to engage your students through this powerful communications medium. Digital content creation supports the Common Core State Standards (CCSS) and 21st-century learning skills by helping students use their knowledge to analyze, create, solve problems, communicate, collaborate, and innovate. This update of the popular *Multimedia Projects in Education*, Fourth Edition emphasizes digital content creation and the use of the CCSS as benchmarks to help you create cutting-edge classroom instruction. The book begins by presenting research on student learning through multimedia and digital content creation. This introduction is followed by outlines of each stage of the practical, easy-to-use Decide, Design, Develop, and Evaluate (DDD-E) model, which is designed specifically for classroom use. Content also includes discussion of multiple intelligences, constructivist learning, and cooperative grouping; blackline masters to guide you and your students through the DDD-E process; and assessment and management strategies. In addition, you'll find sample activities using an array of development tools, information on mobile and web apps, and numerous other resources to support digital projects in your classroom. The book, which is most applicable to students in grades 4 through 12, will also serve as an ideal resource for media specialists who work with teachers and students.

free grade 4 math ebook: Teaching and Learning in a Digital World Michael E. Auer, David Guralnick, Istvan Simonics, 2018-02-09 This book gathers the Proceedings of the 20th International Conference on Interactive Collaborative Learning (ICL2017), held in Budapest, Hungary on 27-29 September 2017. The authors are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of technological developments and global markets, and the need for flexibility and agility are essential and challenging elements of this process that have to be tackled in general, but especially in engineering education. To face these current real-world challenges, higher education has to find innovative ways to quickly respond to them. Since its inception in 1998, this conference has been devoted to new approaches in learning with a focus on collaborative learning. Today the ICL conferences offer a forum for exchange concerning relevant trends and research results, and for sharing practical experience gained while developing and testing elements of new technologies and pedagogies in the learning context.
