The Conference, originally planned for May 2020, was forcefully postponed due to the dramatic insurgence of the pandemic. Despite the difficulties in this period, the Organising Committee decided anyway to keep it, although online and more than one year later, not to disperse the huge work of authors, mainly teachers, who had to face one of the hardest challenges in the last decades, in a historic period where the promotion of social justice and equal opportunities - through digital technologies and beyond - is a key factor for democratic citizenship in our societies. The Organising Committee, the University of Florence, and ATEE wish to warmly thank all the authors for their commitment and understanding, which ensured the success of the Conference. We hope this book could be, not only a witness of these pandemic times, but a hopeful sign for an equal and inclusive education in all countries.

high school history ebook: Family History Digital Libraries William Sims Bainbridge, 2018-11-02 In the modern era, every family and local community can cultivate its own history, endowing living people with meanings inherited from the people of the past, by means of today's computer-based information and communication technologies. A new profession is emerging, family historians, serving the wider public by assisting in collection and analysis of fascinating data, by teaching talented amateur historians, and by producing complete narratives. Essential are the skills and technologies required to preserve and connect photos, movies, videos, diaries, memoirs, correspondence, artefacts and even architecture such as homes. Online genealogical services are well established sources of official government records, but usually not for recent decades, and not covering the valuable records of legal, medical, and religious organizations. Information can be shared and interpreted by family members through oral history interviews, social media, and online private archives such as wikis and shared file depositories. This book explores a wide variety of online information sources and achieves coherence by documenting and interpreting the history of a particular extended American family on the basis of 9 decades of movies and videos, 17 decades of photographs, and centuries of documents. Starting now, any family may begin to preserve their current experiences for the historians of the future, but this will require social as well as technical innovations. This book is the essential resource, providing the fundamental principles, effective methods, and fascinating questions required to make our past live again.

high school history ebook: The Status of Social Studies Jeff Passe, Paul G. Fitchett, 2013-10-01 A team of researchers from 35 states across the country developed a survey designed to create a snapshot of social studies teaching and learning in the United States. With over 12,000 responses, it is the largest survey of social studies teachers in over three decades. We asked teachers about their curricular goals, their methods of instruction, their use of technology, and the way they address the needs of English language learners and students with disabilities. We gathered demographic data too, along with inquiries about the teachers' training, their professional development experiences, and even whether they serve as coaches. The enormous data set from this project was analyzed by multiple research teams, each with its own chapter. This volume would be a valuable resource for any professor, doctoral student, or Master's student examining the field of social studies education. It is hard to imagine a research study, topical article, or professional development session concerning social studies that would not quote findings from this book about the current status of social studies. With chapters on such key issues as the teaching of history, how teachers address religion, social studies teachers' use of technology, and how teachers adapt their instruction for students with disabilities or for English language learners, the book's content will immediately be relevant and useful.

high school history ebook: Digital Divisions Matthew H. Rafalow, 2020-08-12 In the digital age, schools are a central part of a nationwide effort to make access to technology more equitable, so that all young people, regardless of identity or background, have the opportunity to engage with the technologies that are essential to modern life. Most students, however, come to school with digital knowledge they've already acquired from the range of activities they participate in with peers online. Yet, teachers, as Matthew H. Rafalow reveals in *Digital Divisions*, interpret these technological skills very differently based on the race and class of their student body. While teachers praise affluent White students for being "innovative" when they bring preexisting and sometimes

disruptive tech skills into their classrooms, less affluent students of color do not receive such recognition for the same behavior. Digital skills exhibited by middle class, Asian American students render them “hackers,” while the creative digital skills of working-class, Latinx students are either ignored or earn them labels troublemakers. Rafalow finds in his study of three California middle schools that students of all backgrounds use digital technology with sophistication and creativity, but only the teachers in the school serving predominantly White, affluent students help translate the digital skills students develop through their digital play into educational capital. Digital Divisions provides an in-depth look at how teachers operate as gatekeepers for students’ potential, reacting differently according to the race and class of their student body. As a result, Rafalow shows us that the digital divide is much more than a matter of access: it’s about how schools perceive the value of digital technology and then use them day-to-day.

high school history ebook: Revolutionizing Education with Digital Ink Tracy Hammond, Stephanie Valentine, Aaron Adler, 2016-05-19 Derived from contributions to the Workshop on Pen and Touch Technology on Education (WIPTTE) in 2015, this edited volume highlights recent developments for pen and tablet research within the education system with a particular focus on hardware and software developments, comprising the perspectives of teachers, school and university administrators, and researchers for educators at every level. Split into six distinct parts, the book explores topics like how classrooms are increasingly using sketch-based videos, created by teachers and students alike, and how the teaching of key skills such as literacy, languages, math, and art via pen and touch technologies within the classroom are leading to improvements in engagement, learning, and retention levels amongst students. Future perspectives of digital learning, as envisioned by current high school students, are also explored. Revolutionizing Education with Digital Ink is a must-read for those seeking to understand the direction of current and future pen and touch research, its current use in classrooms, and future research directions.

high school history ebook: Adolescents and Literacies in a Digital World Donna E. Alvermann, 2002 By embracing a rapidly changing digital world, the so-called millennial adolescent is proving quite adept at breaking down age-old distinctions among disciplines, between high- and low-brow media culture, and within print and digitized text types. Adolescents and Literacies in a Digital World explores the significance of digital technologies and media in youth's negotiated approaches to making meaning within a broad array of self-defined literacy practices. Organized around a series of case studies, this book blends theories of an attention economy, generational differences, communication technologies, and neoliberal enactive texts with actual accounts of adolescents' use of instant messaging, shape-shifting portfolios, critical inquiry, and media production.
