Making heavy use of Obama's own writings, which he admires for their literary artistry, Sailer gives the deepest insights I have yet seen into Obama's lifelong obsession with 'race and inheritance,' and rounds off his brilliant character portrait with speculations on how Obama's personality might play out in the Presidency. - John Derbyshire Author, Prime Obsession: Bernhard Riemann and the Greatest Unsolved Problem in Mathematics

half blood prince online read: Readers, Reading and Reception of Translated Fiction in Chinese Leo Tak-hung Chan, 2014-04-08 Translated fiction has largely been under-theorized, if not

altogether ignored, in literary studies. Though widely consumed, translated novels are still considered secondary versions of foreign masterpieces. *Readers, Reading and Reception of Translated Fiction in Chinese* recognizes that translated novels are distinct from non-translated novels, just as they are distinct from the originals from which they are derived, but they are neither secondary nor inferior. They provide different models of reality; they are split apart by two languages, two cultures and two literary systems; and they are characterized by cultural hybridity, double voicing and multiple intertextualities. With the continued popularity of translated fiction, questions related to its reading and reception take on increasing significance. Chan draws on insights from textual and narratological studies to unravel the processes through which readers interact with translated fiction. Moving from individual readings to collective reception, he considers how lay Chinese readers, as a community, 'received' translated British fiction at specific historical moments during the late twentieth and early twenty-first centuries. Case studies discussed include translations of stream-of-consciousness novels, fantasy fiction and postmodern works. In addition to lay readers, two further kinds of reader with bilingual facility are examined: the way critics and historians approach translated fiction is investigated from structuralist and poststructuralist perspectives. A range of novels by well-known British authors constitute the core of the study, including novels by Oscar Wilde, James Joyce, D.H. Lawrence, Virginia Woolf, John Fowles, Helen Fielding and J.K. Rowling.

half blood prince online read: The Sacred in Fantastic Fandom Carole M. Cusack, John W. Morehead, Venetia Laura Delano Robertson, 2019-04-16 To the casual observer, similarities between fan communities and religious believers are difficult to find. Religion is traditional, institutional, and serious; whereas fandom is contemporary, individualistic, and fun. Can the robes of nuns and priests be compared to cosplay outfits of Jedi Knights and anime characters? Can travelling to fan conventions be understood as pilgrimages to the shrines of saints? These new essays investigate fan activities connected to books, film, and online games, such as Harry Potter-themed weddings, using *The Hobbit* as a sacred text, and taking on heroic roles in *World of Warcraft*. Young Muslim women cosplayers are brought into conversation with Chaos magicians who use pop culture tropes and characters. A range of canonical texts, such as *Supernatural*, *Buffy the Vampire Slayer*, and *Sherlock*--are examined in terms of the pleasure and enchantment of repeated viewing. Popular culture is revealed to be a fertile source of religious and spiritual creativity in the contemporary world.

half blood prince online read: Digital Consumers David Nicholas, Ian Rowlands, 2008 The information professions - librarianship, archives, publishing and, to some extent, journalism - have been rocked by the digital transition that has led to disintermediation, easy access and massive information choice. Professional skills are increasingly being performed without the necessary context, rationale and understanding. Information now forms a consumer commodity with many diverse information producers engaged in the market. It is generally the lack of recognition of this fact amongst the information professions that explains the difficulties they find themselves in. There is a need for a new belief system that will help information professionals survive and engage in a

ubiquitous information environment, where they are no longer the dominant players, nor, indeed, the suppliers of first choice. The purpose of this thought-provoking book is to provide that overarching vision, built on hard evidence rather than PowerPoint 'puff'. The authors of the acclaimed CIBER Google Generation study, and an international, cross-sectoral team of contributors has assembled together for this purpose. Key strategic areas covered include: the digital consumer: an introduction and philosophy the digital information marketplace and its economics: the end of exclusivity the e-shopper: the growth of the informed purchaser the library in the digital age the psychology of the digital information consumer the information-seeking behaviour of the digital consumer: case study - the virtual scholar the Google generation: myths and realities about young people's digital information behaviour trends in digital information consumption and the future where do we go from here? half blood prince online read: *Superior* Angela Saini, 2019-05-21 This fascinating critique of race science, from the Enlightenment to the 21st century, is an "easy-to-read blend of science reporting, cultural criticism, and personal reflection" (Slate). "An important and timely reminder that race is 'a social construct' with 'no basis in biology.'" —Kirkus Reviews After the horrors of the Nazi regime in World War II, the mainstream scientific world turned its back on eugenics and the study of racial difference. But a worldwide network of intellectual racists and segregationists quietly founded journals and funded research, providing the kind of shoddy studies that were ultimately cited in Richard Herrnstein and Charles Murray's 1994 title *The Bell Curve*, which purported to show differences in intelligence among races. If the vast majority of scientists and scholars disavowed these ideas and considered race a social construct, it was an idea that still managed to somehow survive in the way scientists thought about human variation and genetics. Dissecting the statements and work of contemporary scientists studying human biodiversity, most of whom claim to be just following the data, Angela Saini shows us how, again and again, even mainstream scientists cling to the idea that race is biologically real. As our understanding of complex traits like intelligence, and the effects of environmental and cultural influences on human beings, from the molecular level on up, grows, the hope of finding simple genetic differences between "races"—to explain differing rates of disease, to explain poverty or test scores, or to justify cultural

assumptions—stubbornly persists. At a time when racialized nationalisms are a resurgent threat throughout the world, *Superior* is a rigorous, much-needed examination of the insidious and destructive nature of race science—and a powerful reminder that, biologically, we are all far more alike than different.
