imiraacle technology solutions: We Wait for a Miracle Muhammad H. Zaman, 2023-11-07 The story of how we treat refugees is a story about our own moral failings, and the barriers that refugees face in accessing health care can be as difficult to overcome as any other adversity in their path to stability. Around the world, millions are forcibly displaced by conflict, climate change, and persecution. Some cross international borders, while others are displaced within their own countries. In *We Wait for a Miracle*, Muhammad H. Zaman shares poignant stories across continents to highlight the health care experiences of refugees and forced migrants. For many of these people, health risks unfortunately become part of the fabric of everyday life as they navigate new countries that treat them with varying degrees of care and indifference. Across widely varied local systems, countries of origin, health concerns, and other contexts, Zaman finds that barriers to health care share these key factors: trust, social network, efficiency of the health system, and the regulatory framework of the host environment. A combination of these factors explains difficulties in accessing health care across the geographic and geopolitical spectrum and challenges the existing global public health framework, which is based entirely on local context. In moving stories that span seven countries—Sudan, South Sudan, Uganda, Zimbabwe, Pakistan, Colombia, and Venezuela—Zaman shares the everyday struggles of refugees, the internally displaced, and the stateless in accessing the health care they need. This unique look at an urgent global challenge addresses the issue of access for populations that are currently in distress due to civil war, economic collapse, or a conflict driven by external state actors. Organic social networks and trust, rather than top-down policies, are often what save the lives of migrants, refugees, and the stateless. Focusing on that trust—and its deficit—in camps, urban slums, hospitals, and clinics, Zaman combines personal and journalistic accounts of refugees with broad systemic analysis on global health care access to compare problems and solutions in different regions and provide holistic policy and practice recommendations for refugees, internally displaced persons, and stateless populations.

imiracl technology solutions: No Miracle Mitchell Wigdor, 2016-05-23 No Miracle examines the role of institutions in bridging the 'digital divide' between rich and poor nations and what that means for the country's integration into a global economy. Shifting the debate from whether institutions are important to economic development to which institutions are important and how to build them, Mitchell Wigdor expertly addresses fundamental shortcomings in the existing development literature by identifying specific institutions that mediate the relationship between Information and Communications Technology (ICT) and economic growth. In doing so he challenges those concerned with development to shift their gaze from whether institutions are important to economic development to which institutions might be the focus of government efforts and how to build them. Detailed case studies of the economic development strategies of Singapore and Malaysia from 1960 demonstrate that institution-building and economic development may be as much about process as the specific policies governments pursue. Written in accessible, non-technical, language this book should be read by everyone concerned with economic growth both in less economically developed countries and the more prosperous including those in government, international organizations, NGOs, universities, policy makers and the private sector.

imircle technology solutions: Hitler's Monsters Eric Kurlander, 2017-06-06 "A dense and scholarly book about . . . the relationship between the Nazi party and the occult . . . reveals stranger-than-fiction truths on every page."—Daily Telegraph The Nazi fascination with the occult is legendary, yet today it is often dismissed as Himmler's personal obsession or wildly overstated for its novelty. Preposterous though it was, however, supernatural thinking was inextricable from the Nazi project. The regime enlisted astrology and the paranormal, paganism, Indo-Aryan mythology, witchcraft, miracle weapons, and the lost kingdom of Atlantis in reimagining German politics and society and recasting German science and religion. In this eye-opening history, Eric Kurlander reveals how the Third Reich's relationship to the supernatural was far from straightforward. Even as popular occultism and superstition were intermittently rooted out, suppressed, and outlawed, the Nazis drew upon a wide variety of occult practices and esoteric sciences to gain power, shape propaganda and policy, and pursue their dreams of racial utopia and empire. "[Kurlander] shows how swiftly irrational ideas can take hold, even in an age before social media."—The Washington Post "Deeply researched, convincingly authenticated, this extraordinary study of the magical and supernatural at the highest levels of Nazi Germany will astonish."—The Spectator "A trustworthy [book] on an extraordinary subject."—The Times "A fascinating look at a little-understood aspect of fascism."—Kirkus Reviews "Kurlander provides a careful, clear-headed, and exhaustive examination of a subject so lurid that it has probably scared away some of the serious research it merits."—National Review

imircle technology solutions: Embodied Carbon Ming Hu, 2025-07-01 The global implications surrounding embodied carbon — the total greenhouse gas emissions associated with the production, transportation, assembly, and deconstruction of building materials — are often overlooked. Embodied Carbon challenges the conventional focus on operational carbon, focusing on the inequalities between the Global North and South. Part I traces the historical evolution of embodied carbon, clarifying its definitions, components, measurement and counting methods, and the critical connection between embodied carbon and climate change. Part II delves into the complexities and hidden biases that distort our understanding and approaches to sustainability, particularly the global North bias and the overreliance on high-tech solutions. It highlights how these biases perpetuate environmental disparities and marginalise low-tech, accessible solutions that could benefit broader segments of society. In Part III, we shift to current global efforts and potential pathways forward. Hu offers a comprehensive analysis of existing regulations and policies related to embodied carbon and proposes a low-tech, low-process approach that draws from traditional and indigenous knowledge. The final chapter synthesizes multidisciplinary expert perspectives, offering a new framework for creating equitable and effective solutions to reduce embodied carbon emissions.

imircle technology solutions: Factual Wisdom for the Age of Apostasy Thomas D. Sharts, MEd, 2015-08-04 This book Factual Wisdom For the Age of Apostasy accounts for those issues of life synonymous with the five areas of being human (spiritual, physical, social, psychological and

vocational) associated with living in an age void of truth and commonsense. Moreover, the book offers an analysis of these life issues from various expressive perspectives such as ruminations, aphorisms, sayings and proverbs. It is the hope of this author that readers will comprehend how sacred life is in reference to safeguarding against willful ignorance, vanity, willful stupidity, cowardice and hatred while alternatively exploring and developing beliefs and behavioral lifestyles that promote the sanctity of life. In truth, life is to be lived in such a manner that living is lifted up in glory so that each person on earth has an opportunity to achieve his/her life-giving purpose and receive/and allocate community blessings because of such a fact. Anything less than such a blessed experience are those persons that are living the living death, and certainly, the works expressed in this book find these kinds of lives and those machinations responsible for such debasing experiences a reprehensible outrage that must be excised from civilized social life.
