healthcare language guide free: *Information Systems Architecture for University Hospitals* Silvano Herculano da Luz Júnior, 2022-11-21 The implementation of the Information Systems (IS) Architecture is one of the steps in the construction of the Enterprise Architecture (EA), according to The Open Group Architecture Framework (TOGAF), and can bring notable benefits in supporting the management and governance of Information and Communication Technology (ICT) in organizations, including of health. However, this task is usually followed by several challenges, even more so when we refer to University Hospitals (HU), which are hospitals dedicated to teaching, research, and extension. The purpose of this book is to disseminate an empirical research whose methodological course was carried out in three phases: 1- an extensive Systematic Literature Review, based on 9 specific research questions, to explore the state of the art of the application of EA in health. 2- proposed the 5step Model, with five well-defined steps to help the implementation of the IS Architecture in HUs. 3- practical application of the 5step Model together with TOGAF 9.2 and the Archi tool to build and deliver the IS Architecture of a large HU which seeks to improve the provision of services to the population through investments in ICT. As result, in addition to relevant data to the literature on EA and IS through the SLR and the 5step Model, the delivered IS Architecture for this UH offers a holistic view of the entire ICT, in which identified problems, challenges, possible solutions, and critical success factors for the hospital business.

healthcare language guide free: *The Medical Library Association Guide to Providing Consumer and Patient Health Information* Michele Spatz, 2014-05-01 Comprised of fifteen chapters written by experienced consumer health librarians, The Medical Library Association Guide to Providing Consumer and Patient Health Information is designed for library and information science graduate students as well as librarians new to health and medical librarianship, regardless of library setting. It is comprehensive in scope, covering all aspects of consumer and patient health and medical information from their humble, grassroots beginnings to the ever-evolving applications of new technology and social media. In between, the mundane aspects of health and medical librarianship, such as needs assessment, costs, budgeting and funding, and staffing are discussed. Adding richness to this discussion are the coverage of more sensitive topics such as patient-friendly technology, ethical issues in providing consumer and patient health information, meeting the needs of diverse populations, and responding to individuals from various cultural backgrounds. No comprehensive picture of consumer and patient health librarianship would be complete without addressing the critical importance of marketing and strategic partnerships; such discussions round out this invaluable guide. Patients today must be knowledgeable enough to participate in their health and well-being. Shorter hospital stays, changing reimbursement patterns and the gradual shift towards focusing on proactively maintaining health and managing disease require patients to be informed and actively engaged. Education, information and understanding are important

components of actively-engaged patients. Correspondingly, in today's e-world, there is a glut of information resources available through the Internet – from YouTube videos to Googling to blogs and Twitter feeds. What is lacking in these information-rich times is the relevance of meaning and context for those who ask, “Does this health and medical information apply to me and my unique clinical picture?” or “How do I use this information?” As knowledge navigators, information technology wizards and content experts, librarians offer focused responses to individuals’ specific and highly personal health and medical information queries. In a new healthcare world order of optimizing health and minimizing hospitalizations, such a service is invaluable. Sadly, there still exists in our highly networked and technological age an information gap for those who struggle in obtaining meaningful health or medical information. These individuals may be foreign-born, non-English speaking, poor, rural, aged or semi-literate. Whatever their status, librarians must have the wherewith-all to find germane resources and also help create responsive mechanisms to bridge that health information gap for vulnerable citizens. The Medical Library Association Guide to Providing Consumer and Patient Health Information will guide you on the road to providing that response.
