Vieira, 2022-05-28 Following the success of the popular introductory text, Elementary Food Science (5th edition) covers a broad range of food science topics organized in four parts; Part (1) Interrelated food science topics, Part (2) Food safety & sanitation, Part (3) Food preservation and processing and Part (4) Handling & processing of foods. The opening two chapters discuss what food science actually is, the significance for society, and the large contribution of the food industry to jobs and revenue in the USA and globally. Succeeding chapters cover food regulatory agencies, food labels, food quality and sensory evaluation, and consumer food literacy. Part (3) contains two new chapters dealing with basic aspects of food processing, and the quality of dried foods. Part (4) covers handling and processing major food commodity groups (meat, dairy products, poultry and eggs, fish and shellfish, cereal grains, bakery products, fruits and vegetables, sugar confectionary). kitchen safety quiz downloadable: Food Safety and Technology Governance Kuei-Jung Ni, Ching-Fu Lin, 2022-08-31 Recent advances in agri-food technology have brought increasing complexity and emerging challenges to food safety regulation and governance, with many countries greatly divided in their regulatory approaches. As more advanced CRISPR-based gene-editing technologies and novel foods such as cloned animal products, non-traditional plants, nanofood, and plant-based meat are rapidly being developed, debates arise as to whether the existing models of governance require revision to ensure consumer safety. Of equal importance is the extensive use of pesticides, additives, and animal drugs, which raise concerns over the methods and approaches of government approval and phasing out of potentially risk-causing chemicals. Heightened public criticism of food safety and technology poses a significant challenge to governments around the world, which struggle to strike a proper balance between technocracy- and democracy-oriented risk governance models. Drawing on expertise from the United States, European Union, Japan, China, Korea, Association of South East Asian Nations, Malaysia, and Taiwan, this book explores existing and emerging issues of food law and policy in the context of technology governance to offer an overarching framework for the interaction between food regulation and technology. It will be essential reading for academics, students, and practitioners with an interest in food law and policy, agricultural law and policy, and food safety and nutrition studies.
