legal science advancements: Legal Science in the Early Republic, Steven J. Macias, 2016-05-31 This work examines the intellectual motivations behind the concept of “legal science”—the first coherent American jurisprudential movement after Independence. Drawing mainly upon public, but also private, sources, this book considers the goals of the bar’s professional leaders who were most adamant and deliberate in setting out their visions of legal science. It argues that these legal scientists viewed the realm of law as the means through which they could express their hopes and fears associated with the social and cultural promises and perils of the early republic. Law, perhaps more so than literature or even the natural sciences, provided the surest path to both national stability and international acclaim. While legal science yielded the methodological tools needed to achieve these lofty goals, its naturalistic foundations, more importantly, were at least partly responsible for the grand impulses in the first place. This book first considers the content of legal science and then explores its application by several of the most articulate legal scientists working and writing in the early republic.

legal science advancements: Law, Science, Liberalism, and the American Way of Warfare Stephanie Carvin, Michael John Williams, 2015 Founded and rooted in Enlightenment values, the United States is caught between two conflicting imperatives when it comes to war: achieving perfect security through the annihilation of threats; and a requirement to conduct itself in a liberal and humane manner. In order to reconcile these often clashing requirements, the US has often turned to its scientists and laboratories to find strategies and weapons that are both decisive and humane. In effect, a modern faith in science and technology to overcome life's problems has been utilized to create a distinctly 'American Way of Warfare'. Carvin and Williams provide a framework to understand the successes and failures of the US in the wars it has fought since the days of the early Republic through to the War on Terror. It is the first book of its kind to combine a study of technology, law and liberalism in American warfare.

legal science advancements: *New Advances in Legal Translation and Interpreting* Junfeng Zhao, Defeng Li, Victoria Lai Cheng Lei, 2023-03-02 This book describes interdisciplinary exploration of matters related to the translation and interpreting of legal texts. Translation of legal texts has grown exponentially since the beginning of new millennium in response to the fast-increasing volume of international trade and business as well as all sorts of other transnational activities in a myriad of spheres. International trade demands translation of trade laws and business contracts, immigration leads to rise in court interpreting services, and countries may seek to enhance their international influence through translating and making known to the world their laws and/or other legal documents. These legal translation activities occurred mostly between languages officially used in international or regional organizations, such as the United Nations and the European Union, and between the languages of major countries who exert or seek influence on international economy and law. On the other hand, rapid advances in computer technology and artificial intelligence in recent years have also brought about changes in the practices of legal translation. With changes also come problems in both theory and practice that merit our immediate attention. This edited volume highlights the newest developments in the theory, practice, and training of legal translation, with contributions from international leading researchers in this area. It will be a standard reference for anyone who is to embark on research and practice of legal translation in the twenty-first century. It is also adaptable as teaching materials for translation and interpreting training. Chapter "Translating Legal Terms at International Organisations: Do Institutional Term Banks Meet Translators' Needs?" is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

legal science advancements: *Advances in Experimental Philosophy of Law* Karolina Prochownik, Stefan Magen, 2023-05-18 Only recently have philosophers and psychologists begun to consider empirical research methods to inform questions and debates in legal philosophy. With the field ripe for further experimental inquiry, this collection explores the most topical empirical developments and anticipates future research directions. Bringing together legal scholars, psychologists, and philosophers, chapters address questions such as: Do people share a stable set of intuitions about what the law is? What are common perceptions about causation, intentionality, and culpability, and are they consistent with the corresponding legal concepts? To what extent can experimental research methods advance theoretical debates in legal philosophy about the nature of law? With fascinating implications for legal philosophy, ethics, and moral psychology, *Advances in Experimental Philosophy of Law* sets the agenda for the emerging field of experimental jurisprudence and will be of interest to both researchers and practitioners alike.

legal science advancements: Law, Anthropology, and the Constitution of the Social Alain Pottage, Martha Mundy, 2004-06-24 This collection of interdisciplinary essays explores how persons and things - the central elements of the social - are fabricated by legal rituals and institutions. The contributors, legal and anthropological theorists alike, focus on a set of specific institutional and ethnographic contexts, and some unexpected and thought-provoking analogies emerge from this intellectual encounter between law and anthropology. For example, contemporary anxieties about the legal status of the biotechnological body seem to resonate with the questions addressed by ancient Roman law in its treatment of dead bodies. The analogy between copyright and the transmission of intangible designs in Melanesia suddenly makes western images of authorship seem quite unfamiliar. A comparison between law and laboratory science presents the production of legal artefacts in new light. These studies are of particular relevance at a time when law, faced with the inventiveness of biotechnology, finds it increasingly difficult to draw the line between persons and things.

legal science advancements: Jurisprudence or Legal Science Sean Coyle, George Pavlakos, 2005-05-31 Modern jurisprudence embodies two distinct traditions of thought about the nature of law. The first adopts a scientific approach which assumes that all legal phenomena possess universal characteristics that may be used in the analysis of any type of legal system. The main task of the legal philosopher is to disclose and understand such characteristics, which are thought to be capable of establishment independently of any moral or political values which the law might promote, and of any other context-dependent features of legal systems. Another form of jurisprudential reflection views the law as a complex form of moral arrangement which can only be analysed from within a system of reflective moral and political practices. Rather than conducting a search for neutral standpoints or criteria, this second form of theorising suggests that we uncover the nature and purpose of the law by reflecting on the dynamic properties of legal practice. Can legal philosophy aspire to scientific values of reasoning and truth? Is the idea of neutral standpoints an illusion? Should legal theorising be limited to the analysis of particular practices? Are the scientific and juristic approaches in the end as rigidly distinct from one another as some have claimed? In a series of important new essays the authors of *Jurisprudence or Legal Science* attempt to answer these and other questions about the nature of jurisprudential thinking, whilst emphasising the connection of such 'methodological' concerns to the substantive legal issues which have traditionally defined the core of jurisprudential speculation. The list of contributors includes R. Alexy, S. Coyle, J. Gorman, C. Heidemann, P. Leith, J. Morison, G. Pavlakos and V. Rodriguez-Blanco.

legal science advancements: The Advancement of International Law Charles Leben, 2010-10-15 Any talk of the advancement of international law presupposes that two objections are met. The first is the 'realist' objection which, observing the state of international relations today, claims that when it comes down to the important things in international life-war and peace, and more generally power politics among states-no real advancement has been made: international society remains a society of sovereign states deciding matters with regard solely to their own best interests and with international law all too often being no more than a thin cloak cast over the precept that 'might is right'. Against this excessive scepticism stands excessive optimism: international law is supposedly making giant strides forward thanks especially to the tremendous mass of soft law generated by international organisations over the past sixty years and more. By incautiously mixing all manner of customs, treaties, resolutions and recommendations, a picture of international law is painted that has little to do with the 'real world'. This book is arranged into three sections. The first purports to show from the specific example of international investment law that the past half-century has seen the invention of two genuinely new techniques in positive law: state contracts and transnational arbitration without privity. This is 'advancement' in international law not because the techniques are 'good' in themselves (one may well think them 'bad') but because they have introduced legal possibilities into international law that did not exist heretofore. The second section examines the theoretical consequences of those new legal techniques and especially the way they affect the theory of the state. The third widens the field of view and asks whether European law

has surpassed international law in a move towards federalism or whether it represents a step forward for international law. These reflections make for a clearer theoretical understanding of what constitutes true advancement in international law. Such an understanding should give pause both to those who argue that hardly any progress has been made, and to those who are overly fanciful about progress.

legal science advancements: *Cicero's Law* Paul J. du Plessis, 2016-08-30 This volume brings together an international team of scholars to debate Cicero's role in the narrative of Roman law in the late Republic - a role that has been minimised or overlooked in previous scholarship. This reflects current research that opens a larger and more complex debate about the nature of law and of the legal profession in the last century of the Roman Republic.

legal science advancements: International Scientific Siberian Transport Forum TransSiberia - 2021 Aleksey Manakov, Arkadii Edigarian, 2022-03-18 The book presents latest developments in the field of high-speed railway, Hyperloop transportation technologies and Maglev system. In recent years, railway transport has received a powerful impetus in its development. With the advent of the 4th Industrial revolution, the transport sector is moving towards full digitalization. This is primarily research in the field of the ICT technologies, which will be used for the future railway system. The results of studies on the design of intelligent autonomous transport systems and the operation of high-speed railways in the harsh weather conditions of Siberia are presented in detail. The book presents the state of the art in smart grid technology for railway power systems. This will contribute to decarbonization of the railway. The presented technical innovations in railway science and engineering will help scientists and engineers create a new generation of trains running on alternative fuels and capable of functioning without interruptions in any climatic conditions.

legal science advancements: Advances in Natural, Human-Made, and Coupled Human-Natural Systems Research Svetlana G. Maximova, Roman I. Raikin, Alexander A. Chibilev, Marina M. Silantyeva, 2023-03-16 This book is a collection of cutting-edge and cross-disciplinary studies on natural, human-made, and coupled human-natural systems, addressing the challenge of developing integrated knowledge from multiple disciplines. The authors explore the structure, function, and dynamic mechanisms of various systems, both natural and human-made, as well as analyze their reciprocal interactions under the concept of "coupled human-natural systems." These interactions are used to understand feedback, nonlinearities, thresholds, time lags, legacy effects, and path dependencies, emerging across multiple spatial, temporal, and organizational scales. In other words, this book is a collection of advanced research on unique properties of natural and human-made systems, as well as human-environment dynamics, reciprocal relationships, and cross-scale interactions. The authors outline prospects on building a holistic view of social development and coherent sustainability. Among the topics covered are the following: human networks research; adaptation of local people to social and environmental challenges; coupled dynamics of socioeconomic and environmental systems; critical issues in social science climate change research; education for greater sustainability; peace, justice, and strong institutions; advances in cultural traditions and strategies for social stability; innovative development and barriers to sustainable development; economic systems in the age of digital changes and unstable external environments. The scholars analyze how more effective technologies can enhance resilience, reduce vulnerability, and minimize human impacts on natural systems, taking into consideration critical thresholds to prevent harmful feedback to human systems. The authors grasp the complexity of systems by integrating knowledge of constituent subsystems and their interactions. The framework developed by the authors is used to integrate human and natural systems for achieving greater sustainability, covering critical threats, challenges, and best governance approaches and practices. The research results obtained from studies on coupled human-natural systems are stronger, the authors argue, if compared with traditional (discipline) approaches.
