kannada language sex: With Respect to Sex Gayatri Reddy, 2010-05-15 With Respect to Sex is an intimate ethnography that offers a provocative account of sexual and social difference in India. The subjects of this study are hijras or the third sex of India—individuals who occupy a unique, liminal space between male and female, sacred and profane. Hijras are men who sacrifice their genitalia to a goddess in return for the power to confer fertility on newlyweds and newborn children, a ritual role they are respected for, at the same time as they are stigmatized for their ambiguous sexuality. By focusing on the hijra community, Gayatri Reddy sheds new light on Indian society and the intricate negotiations of identity across various domains of everyday life. Further, by reframing hijra identity through the local economy of respect, this ethnography highlights the complex relationships among local and global, sexual and moral, economies. This book will be regarded as the definitive work on hijras, one that will be of enormous interest to anthropologists, students of South Asian culture, and specialists in the study of gender and sexuality.

kannada language sex: Health Communication and Sexual Health in India Ravindra Kumar Vemula, 2018-11-09 Over the past few years, ever since the advent of HIV and AIDS, there has been increasing discussion of the concept of sexual health. This upsurge is especially noticeable not only in the field of health education and promotion but also in academic sources. The recent discourse on sexual health is paralleled by an upsurge in the debate on sexual rights. This book examines the social construction of sexual health in India through an analysis of HIV and AIDS messages. The broad objective of the chapters is to trace the growth and evolution of the concept of sexual health from a health communication perspective and to understand the role of the state in determining its form and structure. The methodology used includes comparative analysis of HIV and AIDS policies, document analysis on HIV and AIDS, poster and short films analysis, in depth and open-ended Interviews and case studies. The book shows that Sexual Health is constructed in various modes in India. The models that are elaborated are the Medical model that constructs HIV scientifically and in terms of a compromised immune system; the Epidemic model that identifies risk behaviours and transmission routes and the Moralistic model. Social constructions of AIDS as plague or punishment against society are advanced by moralists who equate HIV with taboo social and sexual behaviour and the political constructions highlights public health in the face of obstacles to treatment and the delivery of services to people living with HIV. Bringing together current research and discussions on the three areas of policy, practices and theoretical perspectives related to the use and social construction of sexual health through HIV and AIDS communication approaches with specific reference to India, this book will be of interest to academics in the field of health communication, HIV and AIDS, and South Asian Studies.

kannada language sex: AIDS Activism, Science and Community Across Three Continents Robert Lorway, 2016-09-01 This book critically examines the many complex entanglements between AIDS activism and HIV science. It takes readers on a medical anthropological expedition across time and space that highlights the stakes from the perspective of those most affected by the epidemic. Author Robert Lorway reveals how early in the HIV epidemic, amid inadequate government leadership, communities of people living with and directly affected by HIV and AIDS rose to become a vital force at the forefront of prevention responses. Yet now, more than three decades later, HIV prevention and treatment is increasingly being placed under the jurisdiction of clinical, epidemiological, and management scientific expertise. In this kind of context, where does activism figure into the possibility of more democratized collaborations between affected communities, scientists, and policy makers? Coverage draws upon the findings from an array of community research projects conducted in Canada, India, and Kenya over a 22-year period. It weaves together rich, original data sources that range from in-depth qualitative interviews, field notes, and primary and secondary archival document retrievals in these three regions. Offering a rich diversity in perspectives, this book tackles the broader themes related to global health policy, science, and transnational activism at the same time as it highlights the experiences and local arenas where debates about activism and science play out. In the end, Lorway questions the growing expectation for affected communities themselves to produce sound evidence to legitimize their advocacy projects. He calls for the planners and implementers of biomedically oriented HIV research and interventions to more meaningfully engage with communities in ways that de-monopolize decision making as a matter of ethics and improved scientific practice.

kannada language sex: Features Greville G. Corbett, 2012-10-11 Features are a central concept in linguistic analysis. They are the basic building blocks of linguistic units, such as words. For many linguists they offer the most revealing way to explore the nature of language. Familiar features are Number (singular, plural, dual, ...), Person (1st, 2nd, 3rd) and Tense (present, past, ...). Features have a major role in contemporary linguistics, from the most abstract theorizing to the most applied computational applications, yet little is firmly established about their status. They are used, but are little discussed and poorly understood. In this unique work, Corbett brings together

two lines of research: how features vary between languages and how they work. As a result, the book is of great value to the broad range of perspectives of those who are interested in language.

kannada language sex: The Biological Variation in Indian Populations K. S. Singh, V. Bhalla, Vinod Kaul, 1994 The People of India project, a massive exercise carried out by the Anthropological Survey of India, has generated a wealth of information on the hundreds of communities, castes and tribes which exist in this country. The subjects covered include culture, society, location, language, script, biological variation, educational level, impact of development, food habits, rituals, and work practices. The present volume comprises all the material which was collected on the existing biological information available for nearly 900 Indian communities. The material was gathered from the All India Anthropometric Survey and the All India Bio-Anthropological Surveys conducted by the Anthropological Survey of India. The larger set of quantitative data is contained in tables within this volume which deal with somatometry, dermatoglyphics, blood groups, serum proteins, biochemical variants and various genetic traits. A major finding of this exercise is the heterogeneity of biological traits, and the pattern of their distribution across social categories and territories. The data also suggests that much ground still remains to be covered vis-a-vis biological on India - in sharp contrast to the cultural and linguistic material that the Survey has now made available.
