**investment evaluation questions ebook:** *Digital Governance of Education* Paolo Landri, 2018-09-20 Digital Governance of Education explores the multiple ways in which digital technologies are changing the experience of education. With much of the contemporary education practice either taking place or being documented digitally, a huge amount of data is constantly being collected and analysed to give sophisticated and up-to-date accounts of education practice in contemporary societies. Such 'datafication' of education, mediated through technology, gives rise to what the author defines as 'digital governance' of education - a transnational assemblage of people, technologies and policies that increasingly affects how national education systems are organized and managed. Paolo Landri argues that the emergence of digital governance is closely related to the new wave of standardization in education, exemplified by the shift towards what is measurable (for example focus on 'learning outcomes') and towards transparency in education practice - a shift that is both facilitated and augmented by digital technologies. The author places the digital governance of education within the framework of Europeanization of education, exploring how it contributes to the creation and regulation of European education arena through consolidation of digital space and tools introduced in this process (such as guidelines, country reports and online dashboards). Adopting a sociomaterial approach to education policy and drawing on actor-network theory, Paolo Landri uses empirical data to investigate how the digitization of education policy and practice is

occurring in Italy, and to what extent it contributes to the growth of the digital governance of education. Pointing out the variety of risks and opportunities, he indicates future directions of critical research and the wider international implications of this global trend.

**investment evaluation questions ebook: Evaluating and Measuring the Value, Use and Impact of Digital Collections** Lorna M. Hughes, 2012 A huge investment has been made in digitizing scholarly and cultural heritage materials through initiatives based in museums, libraries and archives, as well as higher education institutions. The 'Digital Economy' is an important component of institutional planning, and much attention is given to the investment in digital projects and programmes. However, few initiatives have examined the actual use, value and impact of digital collections, and the role of digital collections in the changing information environment. As the creative, cultural and educational sector faces a period of restricted funding, it is timely to re-examine the use of the digital collections that have been created in the past twenty years, and to consider their value to the institutions that host them and to the communities of users they serve.

This book brings together a group of international experts to consider the following key issues: What is the role of digital resources in the research life cycle? Do the arts and humanities face a 'data deluge'? How are digital collections to be sustained over the long term? How is use and impact to be assessed? What is the role of digital collections in the 'digital economy'? How is public engagement with digital cultural heritage materials to be assessed and supported? This book will be of interest to academics, librarians, archivists and the staff of cultural heritage organizations, as well as funders and other key stakeholders with an interest in the development and long term sustainability of digital collections.--Publisher's website.
