When teachers think aloud and then craft a piece of writing in front of their students, they give student writers a peek into what is possible in their own writing. In this book, Kelly Boswell shows you how to transform student writers by infusing short bursts of purposeful teacher modeling. As students watch an adult writer think, talk, and write, they can develop the skills needed in order to create writing that is both polished and purposeful. mathspot: *Finding Einstein's Brain* Frederick E. Lepore, 2018-06-25 Albert Einstein remains the quintessential icon of modern genius. Like Newton and many others, his seminal work in physics includes the General Theory of Relativity, the Absolute Nature of Light, and perhaps the most famous equation of all time: $E=mc^2$. Following his death in 1955, Einstein's brain was removed and preserved, but has never been fully or systematically studied. In fact, the sections are not even all in one place, and some are mysteriously unaccounted for! In this compelling tale, Frederick E. Lepore delves into the strange, elusive afterlife of Einstein's brain, the controversy surrounding its use, and what its study represents for brain and/or intelligence studies. Carefully reacting to the skepticism of 21st century neuroscience, Lepore more broadly examines the philosophical, medical, and scientific implications of brain-examination. Is the brain simply a computer? If so, how close are we to artificially creating a human brain? Could scientists create a second Einstein? This "biography of a brain" attempts to answer these questions, exploring what made Einstein's brain anatomy exceptional, and how "found" photographs--discovered more than a half a century after his death--may begin to uncover the nature of genius.
