lot 49 ebook: Digital Culture in Contemporary Fiction Jaime Harrison, 2024-02-22 What does it mean to be human in a world increasingly determined by algorithms? How can fiction articulate identity and subjectivity in the face of technology which seeks to reduce us to raw data? These questions drive a growing body of fiction about our contemporary moment, written by authors whose interests extend beyond simply writing about digital culture on a surface level but who seek to delve into the computational constructs which underpin it. Through readings of novels by Joshua Cohen, Nicola Barker, and Neal Stephenson, and a visual novel developed by Grasshopper Manufacture, Digital Culture in Contemporary Fiction offers the first analysis of the representation of computational algorithms and their cultural consequences in twenty-first-century fiction. Harrison theorizes a new cultural moment in which he places these authors, one characterized by a turn in software development towards incorporating models derived from behavioural psychology, and

vitality fuelled by an abundance of data. Throughout its readings, *Digital Culture in Contemporary Fiction* traces how each author gestures towards the literary and philosophical hermeneutics of algorithms and, in doing so, defines an emerging tradition of fiction attempting to redefine the novel's relevance within digital culture.

lot 49 ebook: *Thomas Pynchon's Animal Tales* Keita Hatooka, 2022-08-29 Throughout his works, Thomas Pynchon uses various animal characters to narrate fables that are vital to postmodernism and ecocriticism. *Thomas Pynchon's Animal Tales: Fables for Ecocriticism* examines case studies of animal representation in Pynchon's texts, such as alligators in the sewer in *V.*; the alligator purse in *Bleeding Edge*; dolphins in the Miami Seaquarium in *The Crying of Lot 49*; dodoes, pigs, and octopuses in *Gravity's Rainbow*; Bigfoot and Godzilla in *Vineland* and *Inherent Vice*; and preternatural dogs and mythical worms in *Mason & Dixon* and *Against the Day*. Through this exploration, Keita Hatooka illuminates how radically and imaginatively the legendary novelist depicts his empathy for nonhuman beings. Furthermore, by conducting a comparative study of Pynchon's narratives and his contemporary documentarians and thinkers, *Thomas Pynchon's Animal Tales* leads readers to draw great lessons from the fables, which stimulate our ecocritical thought for tomorrow.

lot 49 ebook: *Metamodernism and the Postdigital in the Contemporary Novel* Spencer Jordan, 2024-10-03 Drawing on a range of authors that includes Zadie Smith, Sally Rooney, Ben Lerner, Ali Smith, Tom McCarthy, Jennifer Egan and Kazuo Ishiguro, this book provides an innovative and original analysis of the interdependencies between digital technology and metamodernism through a detailed study of the contemporary novel. We are currently living through a period of profound rupture, in which the way the world is perceived is undergoing significant change. Just as the interplay between capitalism and technology hastened the evolution of modernism and postmodernism, then so too are those same forces now taking us into uncharted waters. In an increasingly fragile world, in which the very existence of humankind is threatened, it is vital that we begin to understand this new landscape.

lot 49 ebook: *Digital Communion* Nick Ripatrazone, 2022-03-29 Marshall McLuhan was the greatest prophet of the digital age. In the 1960s, McLuhan, a Canadian literary theorist reared on Elizabethan satire and the labyrinthine novels of James Joyce, turned his attention toward the budding and befuddling electronic age. Like most prophets, McLuhan became one through a fascination with God. Prophets divine their wisdom from a source, and *Digital Communion* shows that McLuhan's was his own Catholic faith. In other words, the greatest prophet of the digital age was an ardent Christian. A reconsideration of his vision can change the way we view the online world. A Catholic convert, McLuhan foretold a digital age full of blessings and sins: a world where information was a phone call or keystroke away, but where our new global village could also bring out the worst in us. For him, mass media was a form of Mass. McLuhan thought that while the print world was visual, the electric world--especially television--was a medium of touch. It enveloped us. For McLuhan, God was everywhere, including in the electric light. *Digital Communion* considers the religious history of mass communication, from the Gutenberg Bible to James Joyce's literary forerunners of hypertextual language to McLuhan's vision of the electronic world as a place of potential spiritual exchange, in order to reveal how we can cultivate a more spiritual vision of the internet--a vision we need now more than ever.

lot 49 ebook: *Brand New World* Anna Coudenys, 2015-10-20 A Brand New World... A strange and yet oh so familiar society. A little different from ours, and then again: not so much. History has been twisted. Just a little. Just enough. In this world we meet ugly duckling Dior Darling whose fate it is to save the world as she uncovers a plot to do away with mankind effectively. As she travels around the world in search of clues, she gets entangled in world espionage, a love affair that isn't, survives an invasion of Aliens, and uncovers a truth she wishes she hadn't. A truth that will forever change life as we know it. Destruction, creation, and personal development are at the heart of this novel, in the eerily estranging way that defines the best science fiction: This world is not our world, but it never ceases to remind us of the fact that it could easily be. *Brand New World* is slightly absurd, witty - yet another example of Anna's enthralling style of writing that is very often a delicate lace of words that can induce shivers of aesthetic joy and recognition.

lot 49 ebook: *Flat-World Fiction* Liliana M. Naydan, 2021-12-15 Flat-World Fiction analyzes representations of digital technology and the social and ethical concerns it creates in mainstream literary American fiction and fiction written about the United States in the first two decades of the twenty-first century. In this period, authors such as Don DeLillo, Jennifer Egan, Dave Eggers, Joshua Ferris, Jonathan Safran Foer, Mohsin Hamid, Thomas Pynchon, Kristen Roupenian, Gary Shteyngart, and Zadie Smith found themselves not only implicated in the developing digital world of flat screens but also threatened by it, while simultaneously attempting to critique it. As a result, their texts explore how human relationships with digital devices and media transform human identity and human relationships with one another, history, divinity, capitalism, and nationality. Liliana M. Naydan walks us through these complex relationships, revealing how authors show through their fiction that technology is political. In the process, these authors complement and expand on work by historians, philosophers, and social scientists, creating accessible, literary road maps to our digital future.

lot 49 ebook: *The Past Is a Moving Picture* Janna Jones, 2012-07-01 Almost all remnants of culture--past and present--degrade over time, whether sculpture or scrolls, painting or papyrus, books or clay tablets. Perhaps no major cultural record dissolves more rapidly than film, arguably the predominant medium of the twentieth century. Given the fragility of early nitrate film, much has already been lost. The fragments that remain--whether complete prints of theatrical releases or scraps of everyday life captured by Thomas Edison--only hint at what has disappeared. More recently, archives have been flooded with so much material that they lack the funds to properly preserve it all. Both situations raise questions about how film archives shape our understanding of history and culture. Janna Jones provides a stunning, tour-de-force analysis of the major assumptions and paradigmatic shifts about history, cinema, and the moving image archive, one that we ignore at our peril in the midst of the overwhelming rush toward digitization. No student of film, twentieth-century history, or archiving and preservation can afford to miss *The Past Is a Moving Picture*

lot 49 ebook: *Soundtracked Books from the Acoustic Era to the Digital Age* Justin St. Clair, 2022-06-15 Offering both a short history and a theoretical framework, this book is the first extended study of the soundtracked book as a media form. A soundtracked book is a print or digital publication for which a recorded, musical complement has been produced. Early examples were primarily developed for the children's market, but by the middle of the twentieth century, ethnographers had begun producing book-and-record combinations that used print to contextualize musical artifacts. The last half-century has witnessed the rapid expansion of the adult market, including soundtracked novels from celebrated writers such as Ursula K. Le Guin, Kathy Acker, and

Mark Z. Danielewski. While often dismissed as gimmicks, this volume argues that soundtracked books represent an interesting case study in media consumption. Unlike synchronous multimedia forms, the vast majority of soundtracked books require that audience activity be split between reading and listening, thus defining the user experience and often shaping the content of singing books as well. Mapping the form's material evolution, this book charts a previously unconsidered pathway through more than a century of recording formats and packaging strategies, emphasizing the synergies and symbioses that characterize the marriage of sound and print. As such, it will be of value to scholars and postgraduate students working in media studies, literary studies, and sound studies.

lot 49 ebook: Narrative Machine Zena Meadowsong, 2018-11-20 *Narrative Machine: The Naturalist, Modernist, and Postmodernist Novel* advances a new history of the novel, identifying a crucial link between narrative innovation and the historical process of mechanization. In the late nineteenth century, the novel grapples with a new and increasingly acute problem: In its attempt to represent the colossal power of modern machinery—the steam-driven machines of the Industrial Revolution, the electrical machines of the modern city, and the atomic and digital machines developed after the Second World War—it encounters the limitations of traditional representative strategies. Beginning in the naturalist novel, the machine is typically portrayed as a mythic monster, and though that monster represents a potentially horrific reality—the superhuman power of mechanization—it also disrupts the documentary objectives of narrative realism (the dominant mode of nineteenth-century fiction). The mechanical monster, realistic and yet at odds with traditional realist strategies, tears the form of the novel apart. In doing so, it unleashes a series of innovations that disclose, critique, and contest the force of mechanization: the innovations associated with literary naturalism, modernism, and postmodernism.

lot 49 ebook: The Cryptographic Imagination Shawn James Rosenheim, 2020-03-24 Originally published in 1996. In *The Cryptographic Imagination*, Shawn Rosenheim uses the writings of Edgar Allan Poe to pose a set of questions pertaining to literary genre, cultural modernity, and technology. Rosenheim argues that Poe's cryptographic writing—his essays on cryptography and the short stories that grew out of them—requires that we rethink the relation of poststructural criticism to Poe's texts and, more generally, reconsider the relation of literature to communication. Cryptography serves not only as a template for the language, character, and themes of much of Poe's late fiction (including his creation, the detective story) but also as a secret history of literary modernity itself. Both postwar fiction and literary criticism, the author writes, are deeply indebted to the rise of cryptography in World War II. Still more surprising, in Rosenheim's view, Poe is not merely a source for such literary instances of cryptography as the codes in Conan Doyle's *The Dancing-Men* or in Jules Verne, but, through his effect on real cryptographers, Poe's writing influenced the outcome of World War II and the development of the Cold War. However unlikely such ideas sound, *The Cryptographic Imagination* offers compelling evidence that Poe's cryptographic writing clarifies one important avenue by which the twentieth century called itself into being. The strength of Rosenheim's work extends to a revisionistic understanding of the entirety of literary history (as a repression of cryptography) and then, in a breathtaking shift of register, interlinks Poe's exercises in cryptography with the hyperreality of the CIA, the Cold War, and the Internet. What enables this extensive range of applications is the stipulated tension Rosenheim discerns in the relationship between the forms of the literary imagination and the condition of its mode of production. Cryptography, in this account, names the technology of literary production—the diacritical relationship between decoding and encoding—that the literary imagination dissimulates as hieroglyphics—the hermeneutic relationship between a sign and its content.—Donald E. Pease, Dartmouth College
