medical pathophysiology learning materials: *Advances and New Perspectives in Higher Education Quality* Maria Esteban, Ana B. Bernardo, Ellian Tuero Herrero, Joana R. Casanova, Antonio Cervero, 2024-04-22 The changes that have occurred in today's society require Higher Education to be highly efficient in the academic and professional preparation of young people who enter university. For that reason, universities around the globe have been advocating in recent years for an improvement in the quality of teaching-learning processes. As an example, the World University Consortium (2023) currently presents, among its most urgent and priority objectives, the identification of the best evaluative practices of the educational processes that are carried out at the University, as well as the recognition of the actions aimed at improving educational processes based on scientific evidence. In this way, it seeks to distinguish all those educational actions that are at the forefront; going from actions at the micro level, such as individual teaching practices in the classroom (such as the application of the flipped classroom or the use of augmented reality); up to actions taken at the macro level such as those proposed in the Horizon Europe 2020 strategy.
