magic school bus space adventure: *Born Reading* Jason Boog, 2014-07-15 A program for parents and professionals on how to raise kids who love to read, featuring interviews with childhood development experts, advice from librarians, tips from authors and children's book publishers, and reading recommendations for kids from birth up to age five. Every parent wants to give his or her child a competitive advantage. In Born Reading, publishing insider (and new dad) Jason Boog explains how that can be as simple as opening a book. Studies have shown that interactive reading—a method that creates dialogue as you read together—can raise a child's IQ by more than six points. In fact, interactive reading can have just as much of a determining factor on a child's IQ as vitamins and a healthy diet. But there's no book that takes the cutting-edge research on interactive reading and shows parents, teachers, and librarians how to apply it to their day-to-day lives with kids, until now. Born Reading provides step-by-step instructions on interactive reading and advice for developing your child's interest in books from the time they are born. Boog has done the research, talked with the leading experts in child development, and worked with them to compile the "Born Reading Essential Books" lists, offering specific titles tailored to the interests and passions of kids from birth to age five. But reading can take many forms—print books as well as ebooks and apps—and Born Reading also includes tips on how to use technology the right way to help (not hinder) your child's intellectual development. Parents will find advice on which educational apps

best supplement their child's development, when to start introducing digital reading to their child, and how to use tech to help create the readers of tomorrow. Born Reading will show anyone who loves kids how to make sure the children they care about are building a powerful foundation in literacy from the beginning of life.

magic school bus space adventure: Some Kind of Blunderful Livy Hart, 2023-09-25 Fate doesn't play fair in this hilarious and sexy comedy of errors from the author of Planes, Trains, and All the Feels. If you ask Mia Madden, the road to dating hell is paved with suspiciously hot online profiles. Take tonight's date, for example. Alex Conroy's whole "boardroom in the streets, lumberjack in the sheets" thing totally works for her, but his profile did not convey that he represents everything she loathes about corporate hustle culture. He's not even worth her bottle of purse wine. Imagine her horror when it turns out that Alex is also the hot-shot new boss her dad can't stop complaining about—the Forbes 30-under-30 company fixer of his nightmares. Worse, their respective best friends are dating. Mia and Alex are constantly thrown together, whether it's for corporate volunteer hours at the animal rescue, squaring off at the company picnic, or literally trapped in an escape room. It's one nightmare after another...no matter how sexy the company is. Mia's life is now a romantic-comedy of errors, complete with her kinda, sorta, accidentally sleeping with the enemy. And she's not sure which is worse: that Alex could ruin her dad's career, or that she might actually like him.

magic school bus space adventure: *Back in the Spaceship Again* Karen Sands-O'Connor, Marietta Frank, 1999-08-30 Much literature for children appears in the form of series, in which familiar characters appear in book after book. In the late nineteenth and early twentieth century, authors began to write science fiction series for children. These early series generally had plots that revolved around inventions developed by the protagonist. But it was the development and use of rocket and atomic science during World War II that paved the way for interesting and exciting new themes, conflicts, and plots. While much has been written about the early juvenile science fiction series, particularly the Tom Swift books, comparatively little has been written about children's science fiction series published since 1945. This book provides a broad overview of this previously neglected topic. The volume offers a critical look at the history, themes, characters, settings, and construction of post-1945 juvenile science fiction series, including the A.I. Gang, the Animorphs, Commander Toad, Danny Dunn, Dragonfall Five, the Magic School Bus, and Space Cat. The book begins with an introductory history of juvenile science fiction since 1945, with chapters then devoted to particular topics. Some of these topics include the role of aliens and animals, attitudes toward humor, the absence and presence of science, and the characterization of women. A special feature is an appendix listing the various series. In addition, the volume provides extensive bibliographical information.
