mita office technology: Academia's Golden Age Richard M. Freeland, 1992-04-23 This book examines the evolution of American universities during the years following World War II. Emphasizing the importance of change at the campus level, the book combines a general consideration of national trends with a close study of eight diverse universities in Massachusetts. The eight are Harvard, M.I.T., Tufts, Brandeis, Boston University, Boston College, Northeastern and the University of Massachusetts. Broad analytic chapters examine major developments like expansion, the rise of graduate education and research, the professionalization of the faculty, and the decline of general education. These chapters also review criticisms of academia that arose in the late 1960s and the fate of various reform proposals during the 1970s. Additional chapters focus on the eight campuses to illustrate the forces that drove different kinds of institutions--research universities, college-centered universities, urban private universities and public universities--in responding to the circumstances of the postwar years.

mita office technology: *Scimitar's Glory* Dietmar Arthur Wehr, 2018-01-30 Human-explored space lies between two alien races that are either openly aggressive or covertly hostile. 7th Fleet discovers that one of those races is moving to attack. In a moment of panic, the commanding admiral orders the fleet to attempt a risky jump through hyperspace. They miss hitting their target star's gravity well and end up deep in unexplored space with a shockingly long trip home and not nearly enough food to last that long. With war now raging in their home systems, the officers of 7th Fleet must find a way to put aside their egos, ambitions and fears in order to make it back, and they know that not all of them will. *Scimitar's Glory* is the first book in a new, fast-paced, action-packed military SF series: *Swordships Odyssey*. The second book, *Excalibur's Quest*, is also now available. Excerpt: With a long, risky jump like this, Dejanus would have expected Corregidor's astrogational AI to take at least ten minutes to aim the ship as precisely as possible to the distant star's center. She was therefore surprised and somewhat alarmed when the flagship signaled to the rest of the fleet that they could start to match her trajectory after only half that time. "Goddammit, what's the rush?" she said to Koenig who was the only other human on the Bridge. "There's no possible way the Jab fleet can catch us before we jump, even if we take another hour to do it. Why not take a few extra minutes to get the most accurate trajectory possible?" When it became clear that Koenig had nothing to say, she continued. "Astro, I want you to check the flagship's alignment with Alpha9 while we match vectors. Let me know if you think the flagship's vector could be better." That extra task delayed *Excalibur's* alignment, and therefore she became the last ship in the fleet to signal her readiness for the jump. "Fleet Commander on Tac2, Commander," said the com AI. Dejanus switched channels to her Command Pod. "Excalibur Actual speaking," said Dejanus in the formal form of address that ship COs normally didn't bother with. "What's taking your Astro so long to get aligned, Commander?" Rostov didn't bother to hide his annoyance. "Just double-checking the overall jump trajectory, Admiral." Dejanus thought she heard Rostov swear under his breath, but it could have been her imagination. "You tell your Astro that if *Excalibur* isn't aligned in the next two minutes, I'll order him replaced and transferred to a cargo hauler. FC out!" The astro AI managed to get the ship aligned within the deadline to no one's surprise. With all ships in the fleet now aligned perfectly with the flagship and jump velocity attained, the order was given to enter hyperspace. It was 131.3 hours later when both Koenig and Dejanus were on the Bridge again watching the jump chronometer countdown to the second when the ship should drop back down into normal space. Koenig watched the countdown clock hit zero and then start counting up again. After ten more seconds, Dejanus began shaking her head. She had a horrified expression on her face. "We've missed. That bastard has killed us all."

mita office technology: Biotechnology in Japan Malcolm V. Brock, 2024-11-01 In the early 1980s, biotechnology caused worldwide excitement as a high technology with almost unlimited potential in science, medicine, and industry. It not only allowed the manufacture of traditional products more quickly and inexpensively, but also offered the possibility of synthesizing valuable materials anew. All this made it very attractive to Japanese policymakers, who 'targeted' it as a high priority area for economic growth. Originally published in 1989, *Biotechnology in Japan* is the first published in English to analyse the Japanese effort to promote the new biotechnology industries. The author examines the strategies used for developing biotechnology in Japan and looks at the active role of government in a field in which the Japanese rapidly became the world leaders. Focusing on the making and implementation of biotechnology policy, he considers the relationship between the public and the private sector, and makes use of different political constructs to analyse Japan's complex and unique balance between competitive market forces and collective interest.

meta office technology: *A Guide to Federal Terms and Acronyms* Don Philpott, 2017-12-20 Navigating government documents is a task that requires considerable knowledge of specialized terms and acronyms. This required knowledge nearly amounts to knowing a completely different language. To those who are not fluent, the task can be overwhelming, as federal departments fill their documents with acronyms, abbreviations, and terms that mean little or nothing to the outsider. Would you be able to make sense of a document that described how the COTR reports to the CO regarding compliance with FAR, GPRA, SARA, and FASA? (This is a common procedure in government contracting.) Would you have any clue what was being referred to if you came across MIL-STD-129P? (It is the new standard for Military Shipping Label Requirements.) The sheer number of such terms makes mastering them nearly impossible. But now, these terms and their definitions are within reach. This new edition of *A Guide to Federal Terms and Acronyms* presents a glossary of key definitions used by the federal government. It is updated to include new acronyms and terminology from various federal government departments. It covers the most common terms,

acronyms, and abbreviations used by each major agency, presenting definitions and explanations in a user-friendly and accessible way. This is an essential tool for anyone who works with federal government information.

mita office technology: Organizing Global Technology Flows Pierre-Yves Donzé, Shigehiro Nishimura, 2013-11-12 Research on the international transfer of technology in economics and management literature has primarily focused on the role of countries and that of companies, in particular multinational enterprises (MNEs). Similarly, economic and business historians have tended to view international technology transfer as a way for economically 'backward' countries to acquire new technologies in order to catch up with more developed economies. This volume provides a more in-depth understanding of how the international transfer of technologies is organized and, in particular, challenges the core-periphery model that is still dominant in the extant literature. By looking beyond national systems of innovation, and statistics on foreign trade, patent registration and foreign direct investment, the book sheds more light on the variety of actors involved in the transfer process (including engineers, entrepreneurs, governments, public bodies, firms, etc.) and on how they make use of a broad set of national and international institutions facilitating technology transfer. Put differently, the volume offers a better understanding of the complexity of global technology flows by examining the role and actions of the different actors involved. By bringing together a number of original case studies covering many different countries over the period from the late 19th to the 21st century, the book demonstrates how technology is being transferred through complex processes, involving a variety of actors from several countries using the national and international institutional frameworks.
