moving man simulation solutions: Modeling, Programming and Simulations Using LabVIEW™ Software Riccardo de Asmundis, 2011-01-21 Born originally as a software for instrumentation control, LabVIEW became quickly a very powerful programming language, having some peculiar characteristics which made it unique: the simplicity in creating very effective Users Interfaces and the G programming mode. While the former allows designing very professional controls panels and whole Applications, completed with features for distributing and installing them, the latter represents an innovative and enthusiastic way of programming: the Graphical representation of the code. The surprising aspect is that such a way of conceiving algorithms is absolutely similar to the SADT method (Structured Analysis and Design Technique) introduced by Douglas T. Ross and SofTech, Inc. (USA) in 1969 from an original idea of MIT, and extensively used by US Air Force for their projects. LabVIEW practically allows programming by implementing straightly the equivalent of an SADT actigram. Beside this academical aspect, LabVIEW can be used in a variety of forms, creating projects that can spread over an enormous field of applications: from

control and monitor software to data treatment and archiving; from modeling to instruments controls; from real time programming to advanced analysis tools with very powerful mathematical algorithms ready to use; from full integration with native hardware (by National Instruments) to an easy implementation of drivers for third party hardware. In this book a collection of different applications which cover a wide range of possibilities is presented. We go from simple or distributed control software to modeling done in LabVIEW; from very specific applications to usage in the educational environment.

moving man simulation solutions: *Modellierung und Simulation der Phasenwechselforgänge in makroverkapselten latenten thermischen Speichern* Fabian Rösler, 2014 In vielen Prozessen wird Wärme freigesetzt, die jedoch dort und zur gleichen Zeit nicht gebraucht wird. Wärmespeicher dienen dazu, überschüssige thermische Energie aufzunehmen und bei Bedarf zu einem späteren Zeitpunkt oder auch an einem anderen Ort wieder abzugeben. Bei der Latentspeicherung wird ein sog. Phase Change Material (PCM) durch zugeführte Wärme geschmolzen, welche bei der Erstarrung wieder frei wird. Ziel ist es, preisgünstige Speicher mit hoher Kapazität auf kleinem Raum zu entwickeln, welche möglichst schnell be- und entladen werden können. Der Autor beschreibt in dieser Abhandlung seinen Beitrag zum Verständnis der hierbei ablaufenden thermofluidodynamischen Vorgänge. Er hat hierzu Modelle entwickelt, Simulationen durchgeführt und deren Vorhersagen durch Experimente geprüft.

moving man simulation solutions: *Middleware Solutions for Wireless Internet of Things* Paolo Bellavista, Carlo Giannelli, Sajal K. Das, Jiannong Cao, 2019-07-15 The proliferation of powerful but cheap devices, together with the availability of a plethora of wireless technologies, has pushed for the spread of the Wireless Internet of Things (WIoT), which is typically much more heterogeneous, dynamic, and general-purpose if compared with the traditional IoT. The WIoT is characterized by the dynamic interaction of traditional infrastructure-side devices, e.g., sensors and actuators, provided by municipalities in Smart City infrastructures, and other portable and more opportunistic ones, such as mobile smartphones, opportunistically integrated to dynamically extend and enhance the WIoT environment. A key enabler of this vision is the advancement of software and middleware technologies in various mobile-related sectors, ranging from the effective synergic management of wireless communications to mobility/adaptivity support in operating systems and differentiated integration and management of devices with heterogeneous capabilities in middleware, from horizontal support to crowdsourcing in different application domains to dynamic offloading to cloud resources, only to mention a few. The book presents state-of-the-art contributions

in the articulated WIoT area by providing novel insights about the development and adoption of middleware solutions to enable the WIoT vision in a wide spectrum of heterogeneous scenarios, ranging from industrial environments to educational devices. The presented solutions provide readers with differentiated point of views, by demonstrating how the WIoT vision can be applied to several aspects of our daily life in a pervasive manner.
