Despite this, crisis management has not yet been a prominent part of the modern business school curriculum. The pandemic has changed that, and how to deal with crisis has become the major question, not only for entrepreneurs and managers, but also for business educators. This book presents 22 case studies of Asian multinational corporations overcoming crisis. The topics do not only deal with the pandemic, but all kind of challenges of modern business and show how companies did overcome or which strategies they have developed to do so. The companies are divided into different industries such as the automotive industry, entertainment or aviation industries. The cases can be used in business and international management classes, but can also be read to learn about modern crisis management strategies.

**new ovo levels: Statistical Tools for Nonlinear Regression** Sylvie Huet, Anne Bouvier, Marie-Anne Poursat, Emmanuel Jolivet, 2013-04-17 If you need to analyze a data set using a parametric nonlinear regression model, if you are not on familiar terms with statistics and software, and if you make do with S-PLUS, this book is for you. In each chapter we start by presenting practical examples. We then describe the problems posed by these examples in terms of statistical problems, and we demonstrate how to solve these problems. Finally, we apply the proposed methods to the example data sets. You will not find any mathematical proofs here. Rather, we try when possible to explain the solutions using intuitive arguments. This is really a cook book. Most of the methods proposed in the book are derived from classical nonlinear regression theory, but we have also made attempts to provide you with more modern methods that have proved to perform well in practice. Although the theoretical grounds are not developed here, we give, when appropriate, some technical background using a sans serif type style. You can skip these passages if you are not interested in this information. The first chapter introduces several examples, from experiments in agronomy and biochemistry, to which we will return throughout the book. Each example illustrates a different problem, and we show how to methodically handle these problems by using parametric nonlinear regression models.
