

online media archives

online media archives serve as invaluable repositories that preserve and provide access to a wide range of digital content, including videos, images, audio recordings, and documents. These archives facilitate research, education, journalism, and cultural preservation by offering organized collections of media accessible remotely. With the rapid growth of digital content, online media archives have become essential tools for managing and retrieving historical and contemporary media assets. This article explores the concept, types, benefits, challenges, and future trends related to online media archives. It also highlights best practices for effective usage and management of these digital collections, ensuring users can maximize their potential for various professional and academic purposes.

- Best Practices for Effective Archive Management
- Future Trends in Online Media Archives

Understanding Online Media Archives

Online media archives are digital platforms or databases that store and organize multimedia content for long-term preservation and easy accessibility. These archives collect a diverse array of media types, such as photographs, audio recordings, videos, and textual documents, often curated from various sources including government agencies, educational institutions, media organizations, and private collections. The primary purpose of online media archives is to safeguard cultural heritage, support academic research, and provide a reliable resource for historians, journalists, and the general public.

Key Features of Online Media Archives

Effective online media archives typically offer comprehensive metadata tagging, advanced search capabilities, and user-friendly interfaces. Metadata includes descriptive information about each media item, such as date, creator, location, and subject matter, which facilitates precise retrieval.

Additionally, many archives support multimedia playback directly within the platform, enabling users to view or listen to content without downloading files.

The Role of Digitization

Digitization is a foundational process for online media archives, involving the conversion of analog materials like film reels, tapes, and printed photographs into digital formats. This transformation not only preserves the content from physical deterioration but also makes it accessible globally through internet-based platforms. High-quality digitization ensures that the media retains its original attributes, maintaining integrity and usability over time.

Types of Online Media Archives

Online media archives can be categorized based on their content focus, ownership, or target audience. Understanding these types helps users identify the most suitable archives for their needs and clarifies the scope of available resources.

Public Archives

Public online media archives are typically maintained by government bodies, libraries, or museums. These archives are often freely accessible and dedicated to preserving cultural heritage, historical records, and public information. Examples include national libraries' digital collections and public broadcasting archives.

Commercial Archives

Commercial online media archives are operated by private companies and media organizations. These archives may offer exclusive content such as news footage, stock images, and licensed media assets. Access might require subscription fees or licensing agreements, catering primarily to professional users like advertisers, filmmakers, and journalists.

Specialized Archives

Specialized online media archives focus on niche subjects or specific types of media. These archives serve targeted communities, such as academic researchers, industry professionals, or hobbyists. Examples include film archives, sound libraries, or collections dedicated to particular historical events or cultural movements.

Benefits of Using Online Media Archives

Utilizing online media archives offers numerous advantages that enhance research, education, and media production. These benefits underline the importance of maintaining and expanding digital collections in the contemporary information landscape.

Improved Accessibility and Convenience

Online media archives enable users to access vast repositories of media from any location with internet connectivity. This convenience eliminates geographical barriers and reduces the need for physical visits to libraries or archives, accelerating research and content discovery.

Preservation of Cultural and Historical Assets

Digital archiving protects valuable media from the risks of physical degradation, loss, or damage. By securing these assets in digital formats, online media archives ensure their longevity and availability for future generations.

Enhanced Research Capabilities

Advanced search tools and detailed metadata support comprehensive and efficient research processes. Users can filter and locate specific media types, dates, or topics quickly, facilitating in-depth studies and accurate information retrieval.

Support for Creative Industries

Content creators, including filmmakers, educators, and marketers, benefit from access to diverse media assets. Online media archives provide essential resources for storytelling, educational materials, and advertising campaigns, often with proper licensing options.

- Global access to diverse media collections
- Preservation of fragile or rare materials
- Streamlined research and discovery process
- Resource availability for creative and academic projects

Challenges in Managing Online Media Archives

Despite their benefits, online media archives face several challenges related to technology, legal issues, and resource management. Addressing these challenges is critical for maintaining the effectiveness and sustainability of digital collections.

Data Storage and Preservation

Maintaining large volumes of high-quality media files requires substantial storage capacity and robust backup systems. Ensuring the integrity and accessibility of digital content over time involves ongoing technical maintenance and migration to newer formats or platforms.

Copyright and Licensing Issues

Media archives must navigate complex intellectual property laws. Proper rights management, including permissions and licensing agreements, is essential to prevent unauthorized use and to respect creators' rights. This complexity can limit the availability of certain content to users.

Metadata Quality and Standardization

Inconsistent or incomplete metadata can hinder searchability and user experience. Establishing standardized metadata schemas and thorough cataloging practices ensures that media items are accurately described and easily retrievable.

User Privacy and Security

Archives that allow user contributions or interactions must implement security measures to protect personal data and prevent unauthorized access or cyber threats. Balancing openness with security is a continual concern.

Best Practices for Effective Archive Management

Implementing strategic approaches to the organization, preservation, and accessibility of online media archives optimizes their value and usability.

Comprehensive Metadata Implementation

Developing detailed and standardized metadata records allows for precise indexing and efficient retrieval. Metadata should include descriptive,

technical, administrative, and rights-related information for each media item.

Regular Digital Preservation Actions

Archives should perform routine checks, format migrations, and backups to combat digital obsolescence and data loss. Employing preservation standards and technologies ensures long-term sustainability.

User-Centered Interface Design

A well-designed user interface enhances navigation, search functionality, and media playback, improving user satisfaction and engagement. Accessibility features should also be considered to accommodate diverse users.

Clear Licensing and Usage Policies

Transparent guidelines regarding the use and distribution of archived media protect rights holders and inform users of permissible actions. Providing licensing options and attribution requirements supports ethical use.

Future Trends in Online Media Archives

The evolution of technology and user expectations continues to shape the development of online media archives, introducing new opportunities and challenges.

Artificial Intelligence and Machine Learning

AI-powered tools are increasingly utilized for automated metadata generation, content recognition, and enhanced search capabilities. These technologies can streamline cataloging and improve the accuracy of media discovery.

Blockchain for Rights Management

Blockchain technology offers potential solutions for transparent and secure management of intellectual property rights, enabling better tracking of media usage and licensing compliance.

Integration of Virtual and Augmented Reality

Emerging VR and AR technologies may transform how users interact with

archived media, providing immersive experiences that enhance educational and cultural engagement.

Collaborative and Crowdsourced Archiving

Community involvement and crowdsourcing initiatives are expected to expand, allowing users to contribute to the growth and enrichment of online media archives, fostering more diverse and comprehensive collections.

Frequently Asked Questions

What are online media archives?

Online media archives are digital collections of media content such as videos, audio recordings, images, and documents that are stored and accessible via the internet for research, reference, or entertainment purposes.

How do online media archives benefit researchers?

They provide easy access to a vast array of historical and contemporary media resources, enabling researchers to find primary sources, verify information, and analyze trends without geographical constraints.

What types of media are commonly found in online media archives?

Common types include photographs, video footage, audio recordings, newspapers, magazines, broadcast media, and sometimes digital art or manuscripts.

Are online media archives free to access?

Many online media archives offer free access to their collections, but some may require subscriptions, memberships, or one-time fees, especially for high-resolution downloads or commercial use.

How can I contribute to an online media archive?

Contributions typically involve submitting media files or metadata through the archive's submission process, often requiring adherence to copyright and quality guidelines set by the archive.

What role do online media archives play in preserving cultural heritage?

They help preserve and make accessible cultural artifacts and historical media that might otherwise be lost, ensuring that future generations can study and appreciate diverse cultural histories.

How do online media archives ensure the authenticity of their content?

Archives employ metadata standards, provenance documentation, digital watermarking, and sometimes expert verification to maintain the integrity and authenticity of archived content.

What are some popular online media archives available today?

Popular archives include the Internet Archive, Europeana, Getty Images, the Library of Congress Digital Collections, and the British Film Institute archives, among others.

Additional Resources

1. Digital Preservation and Online Media Archives

This book explores the fundamental principles and practices of preserving digital media in online archives. It covers strategies for managing digital collections, ensuring long-term accessibility, and tackling challenges such as format obsolescence and data degradation. Readers will gain insights into both technological and organizational aspects of digital preservation.

2. Managing Online Media Archives: Strategies and Tools

Focusing on practical management techniques, this book provides a comprehensive guide to organizing, cataloging, and maintaining online media archives. It discusses metadata standards, software tools, and workflow optimization to help archivists and librarians improve access and usability of digital collections.

3. The Future of Media Archives in the Digital Age

This forward-looking book examines emerging trends and innovations in the field of media archiving. Topics include artificial intelligence applications, cloud storage solutions, and the impact of social media on archival practices. It offers thought-provoking perspectives on how archives will evolve in coming years.

4. Metadata and Access in Online Media Archives

A detailed examination of the role metadata plays in enhancing discovery and access within digital media archives. The book outlines best practices for metadata creation, standards like Dublin Core and PREMIS, and the integration

of linked data to improve searchability and interoperability.

5. *Preserving Video and Audio in Online Archives*

This specialized volume addresses the unique challenges of archiving audiovisual materials in digital formats. It discusses encoding standards, quality control, and legal considerations, providing archivists with essential knowledge to maintain the integrity and authenticity of video and audio assets.

6. *Building Community Through Online Media Archives*

Highlighting the social impact of media archives, this book explores how digital collections foster community engagement and cultural preservation. It includes case studies of collaborative projects and strategies for involving diverse audiences in the archival process.

7. *Legal and Ethical Issues in Online Media Archiving*

This book delves into the complex legal frameworks and ethical questions surrounding digital media archives. Topics include copyright law, privacy concerns, and access rights, offering guidance for archivists to navigate compliance while respecting creators and users.

8. *Digitization Techniques for Media Archiving*

Focusing on the technical aspects of converting physical media to digital formats, this book covers scanning, encoding, and quality assurance processes. Practical advice on selecting equipment and software makes it an essential resource for institutions undertaking digitization projects.

9. *User Experience Design for Online Media Archives*

This book addresses how to create intuitive and engaging interfaces for accessing digital media archives. It discusses user-centered design principles, accessibility standards, and the integration of search and browsing features to enhance user satisfaction and archival discoverability.

Online Media Archives

online media archives: *Journalism History and Digital Archives* Henrik Bødker, 2020-12-17

This book showcases various ways in which digital archives allow for new approaches to journalism history. The chapters in this book were selected based on three overall objectives: 1) research that highlights specific concerns within journalism history through digital archives; 2) discussions of digital methodologies, as well as specific applications, that are accessible for journalism scholars with no prior experiences with such approaches; and 3) that journalism history and digital archives are connected in other ways than through specific methods, i.e., that the connection raises larger

questions of historiography and power. The contributions address cases and developments in Asia, South and North America and Europe; and range from long-range, big-data, machine-learning and topic modelling studies of journalistic characteristics and meta-journalistic discourses to critiques of archival practices and access in relation to gender, social movements and poverty. The chapters in this book were originally published as a special issue of Digital Journalism.

online media archives: Digital Memory and the Archive Wolfgang Ernst, 2012-12-20 In the popular imagination, archives are remote, largely obsolete institutions: either antiquated, inevitably dusty libraries or sinister repositories of personal secrets maintained by police states. Yet the archive is now a ubiquitous feature of digital life. Rather than being deleted, e-mails and other computer files are archived. Media software and cloud storage allow for the instantaneous cataloging and preservation of data, from music, photographs, and videos to personal information gathered by social media sites. In this digital landscape, the archival-oriented media theories of Wolfgang Ernst are particularly relevant. *Digital Memory and the Archive*, the first English-language collection of the German media theorist's work, brings together essays that present Ernst's controversial materialist approach to media theory and history. His insights are central to the emerging field of media archaeology, which uncovers the role of specific technologies and mechanisms, rather than content, in shaping contemporary culture and society. Ernst's interrelated ideas on the archive, machine time and microtemporality, and the new regimes of memory offer a new perspective on both current digital culture and the infrastructure of media historical knowledge. For Ernst, different forms of media systems—from library catalogs to sound recordings—have influenced the content and understanding of the archive and other institutions of memory. At the same time, digital archiving has become a contested site that is highly resistant to curation, thus complicating the creation and preservation of cultural memory and history.

online media archives: Petrocinema Marina Dahlquist, Patrick Vonderau, 2021-01-28 Petrocinema presents a collection of essays concerning the close relationship between the oil industry and modern media—especially film. Since the early 1920s, oil extracting companies such as Standard Oil, Royal Dutch/Shell, ConocoPhillips, or Statoil have been producing and circulating moving images for various purposes including research and training, safety, process observation, or promotion. Such industrial and sponsored films include documentaries, educationals, and commercials that formed part of a larger cultural project to transform the image of oil exploitation, creating media interfaces that would allow corporations to coordinate their goals with broader cultural and societal concerns. Falling outside of the domain of conventional cinema, such films firmly belong to an emerging canon of sponsored and educational film and media that has developed over the past decade. Contributing to this burgeoning field of sponsored and educational film scholarship, chapters in this book bear on the intersecting cultural histories of oil extraction and media history by looking closely at moving image imaginaries of the oil industry, from the earliest origins or “spills” in the 20th century to today's post industrial “petromelancholia.”

online media archives: Records and Information Management Patricia C. Franks, 2013-04-30 Benefiting LIS students and professionals alike, Franks presents complete coverage of the records and information lifecycle model. Encompassing paper, electronic (databases, office suites, email), and new media records (blogs, wikis), as well as records residing in “the cloud” (software as a service), the text addresses a full range of topics, including The origins and development of records and information The discipline of information governance Creation/capture, classification, and file plan development Retention strategies Access, storage, and retrieval Electronic records and electronic records management systems Emerging technologies such as web records, social media, and mobile devices Vital records, disaster preparedness and recovery, and business continuity Monitoring, auditing, and risk management Inactive records management, archives, and long-term preservation Education and training Developing a strategic records management plan

online media archives: Archival Materialities in a Digital Age Eirini Goudarouli, Andrew Prescott, 2025-02-27 Materiality looms large in the world of archives in storage, conservation, and shape or materials of the records. How does this materiality change in the digital age? The way

digital techniques and materialities transform our engagement with archives is highlighted and explored throughout *Archival Materialities in a Digital Age*.

online media archives: *Writing Time* Sean Franzel, 2023-11-15 Cowinner of the Aldo and Jeanne Scaglione Prize for Studies in Germanic Languages and Literatures *Writing Time* shows how serial literature based in journals and anthologies shaped the awareness of time at a transformative moment in the European literary and political landscapes. Sean Franzel explores how German-speaking authors and editors write time both by writing about time and by mapping time itself through specific literary formats. Through case studies of such writers as F. J. Bertuch, K. A. Böttinger, J. W. Goethe, Ludwig Börne, and Heinrich Heine, Franzel analyzes how serial writing predicated on open-ended continuation becomes a privileged mode of social commentary and literary entertainment and provides readers with an ongoing history of the present, or *Zeitgeschichte*. Drawing from media theory and periodical studies as well as from Reinhart Koselleck's work on processes of temporalization and untimely models of historical time, *Writing Time* presents smaller literary forms—the urban tableau, cultural reportage, and caricature—as new ways of imagining temporal unfolding, recentring periodicals and other serial forms at the heart of nineteenth-century print culture.

online media archives: *Digital Preservation for Libraries, Archives, and Museums* Edward M. Corrado, Heather Moulaison-Sandy, 2017-01-12 This new edition of *Digital Preservation in Libraries, Archives, and Museums* is the most current, complete guide to digital preservation available today. For administrators and practitioners alike, the information in this book is presented readably, focusing on management issues and best practices. Although this book addresses technology, it is not solely focused on technology. After all, technology changes and digital preservation is aimed for the long term. This is not a how-to book giving step-by-step processes for certain materials in a given kind of system. Instead, it addresses a broad group of resources that could be housed in any number of digital preservation systems. Finally, this book is about “things (not technology; not how-to; not theory) I wish I knew before I got started.” Digital preservation is concerned with the life cycle of the digital object in a robust and all-inclusive way. Many Europeans and some North Americans may refer to digital curation to mean the same thing, taking digital preservation to be the very limited steps and processes needed to insure access over the long term. The authors take digital preservation in the broadest sense of the term: looking at all aspects of curating and preserving digital content for long term access. The book is divided into four parts: 1. Situating Digital Preservation, 2. Management Aspects, 3. Technology Aspects, and 4. Content-Related Aspects. *Digital Preservation* will answer questions that you might not have even known you had, leading to more successful digital preservation initiatives.

online media archives: *Doing Digital Methods* Richard Rogers, 2024-01-05 How do you use social media platforms, search engines, and other forms of digital media to explore the key issues of our time? With this second edition, learn how to use the latest advancements in digital methods to answer your pressing research questions. The new edition includes: A new chapter on critical social media research, Tips for analysing content on TikTok, Instagram, Twitter and more, Exploration of Google critique and algorithmic auditing, Examination of YouTube's content removal politics and Facebook's 'fake news' problem. Whether you are new to digital research or are exploring a new platform, this book equips you with tools to navigate the evolving digital landscape and conduct rigorous studies in the digital age.

online media archives: *Exploring the Archived Web during a Highly Transformative Age* Sophie Gebeil, Jean-Christophe Peyssard, 2024-10-01 Given recent global crises, the imperative to preserve and analyze online content has never been more vital to enhancing our comprehension of contemporary changes. This book, the outcome of the 5th international RESAW conference that convened experts from fifty disciplines across seventeen countries in Marseille in June 2023, tackles the multifaceted challenges of web archiving. It underscores the dual roles of web archiving, as cultural heritage and as essential source material for researchers delving into contemporary events and the evolution of digital culture. Through twenty chapters, it explores the development of web

archiving and examines how technical, cultural, geopolitical, societal, and environmental shifts impact its conception, study, and dissemination.

online media archives: Digitization and Digital Archiving Elizabeth R Leggett, 2020-12-15 To help new archivists and genealogists with what can be a daunting process, *Digitization and Digital Archiving: A Practical Guide for Librarians* answers common questions, including: 1. What should be stored? 2. Where and how should it be stored? 3. How exactly is information stored in a computer? 4. How does copyright law affect archiving? 5. How can metadata be used to improve collection access? This revised second edition has been updated to address new trends and the latest innovations in technology, including: 1. A brand-new chapter addressing different common types of born-digital materials which a librarian may need to archive, such as databases or websites 2. Information about identifying and gathering data from floppy disks, an increasingly important task as this technology ages and its data becomes at greater risk of loss 3. Fully updated chapters to address the latest changes in file storage and formats, including more information on the storage of audio and video media 4. Interesting information about the origins of different common technologies to help the reader better understand the past, present, and future of computer technology This is a comprehensive guide to the process of digital storage and archiving. Assuming only basic computer knowledge, this guide walks the reader through everything he or she needs to know to start or maintain a digital archiving project. Any librarian interested in how digital information is stored can benefit from this guide.

online media archives: *Digital Curation for Libraries and Archives* Stacy T. Kowalczyk, 2018-06-29 An up-to-date examination of the evolving field of digital curation and its important place in libraries, covering the major technical, social, and organizational issues surrounding curation for libraries, archives, and other information-based organizations. This book addresses the evolving field of digital curation and its important place in libraries, covering the myriad issues surrounding curation for libraries, archives, and other information-based organizations. Balancing research, theory, and practice in curation, this book is a valuable resource for students, librarians, and archivists that will help them understand the technology infrastructure that supports curation, develop effective curation plans, and make the best choices when digitizing collections that aid in the long term preservation and curation of their materials. The book can serve as a textbook for graduate courses in digital curation, digital libraries, and informatics as well as be useful to librarians and archivists for individual continuing professional education.

online media archives: Media and Memory Joanne Garde-Hansen, 2011-06-29 How do we rely on media for remembering? In exploring the complex ways that media converge to support our desire to capture, store and retrieve memories, this textbook offers analyses of representations of memorable events, media tools for remembering and forgetting, media technologies for archiving and the role of media producers in making memories. Theories of memory and media are covered alongside an accessible range of case studies focusing on memory in relation to radio, television, pop music, celebrity, digital media and mobile phones. Ethnographic and production culture research, including interviews with members of the public and industry professionals, is also included. Offering a comprehensive introduction to the connections and disconnections in the study of media and memory, this is the perfect textbook for media studies students.

online media archives: **Sustainable Resilience in Women's Film and Video Organizations** Rosanna Maule, 2023-07-14 This book illustrates a distinctive lineage of critical interventions in moving image culture and in the public sphere through the trajectories of a small number of film and video organizations established between the 1970s and the early 1980s in Western Europe and North America mainly by women and still operative today. The six case studies examined (*Drac Màgic*, *Women Make Movies*, *Groupe Intervention Vidéo*, *Leeds Animation Workshop*, *bildwechsel*, *Centre Audiovisuel Simone de Beauvoir*) have maintained a discrete yet continuing presence within an audiovisual industry and a cultural system dominated by institutionalized and corporate forms of production and distribution. Their longevity - quite a rarity in the independent circuit - makes a strong case for the sustainability of feminist/LGBTQ media

activism in the public sphere, in spite of its low-key profile. This volume will be of interest to academicians of history and communication studies, feminist and LGBTQ topics, and gender-related cinematic culture.

online media archives: Digital Snaps Jonas Larsen, Mette Sandbye, 2020-08-12 Photography as an everyday practice is once again changing dramatically. At this moment of transition from analogue to digital, Digital Snaps aims to develop a new media ecology that can accommodate these changes to photography 'as we know it'. Expert contributors representing varied disciplines demonstrate how and to what extent the traditional social practices, technologies and images of analogue photography are being transformed with the movement to digital photography. They zoom in on typical, vernacular, everyday practices: the development of the family photo album from a physical object in the living room to a digital practice on the Internet; the use of mobile phones in everyday life; photo communities on the Internet; photo booth photography; studio photography; and fine arts' appropriation of amateur photography. They explore how this media convergence transforms the media ecology - the networks, objects, performances, meanings and circulations - of vernacular photography, as we research it through ordinary people's use of such new cameras and interactive Internet spaces as part of their everyday lives.

online media archives: Performing Digital David Carlin, Laurene Vaughan, 2016-03-03 Digital technologies have transformed archives in every area of their form and function, and as technologies mature so does their capacity to change our understanding and experience of material and performative cultural production. There has been an exponential explosion in the production and consumption of video online and yet there is a scarcity of knowledge and cases about video and the digital archive. This book seeks to address that through the lens of the project Circus Oz Living Archive. This project provides the case study foundation for the articulation of the issues, challenges and possibilities that the design and development of digital archives afford. Drawn from eight different disciplines and professions, the authors explore what it means to embrace the possibilities of digital technologies to transform contemporary cultural institutions and their archives into new methods of performance, representation and history.

online media archives: American Exceptionalism, the French Exception, and Digital Media Law Lyombe S. Eko, 2013-07-10 This volume explores the sameness and difference between the United States and France in the matters of freedom of expression on the Internet. The United States and France are liberal democracies that are part of the Western family of nations. However, despite their many similarities, they have a number of cultural and ideological differences. The United States is generally France's ally in time of war and its cultural nemesis in time of peace. One of the reasons for this unusual relationship is that the United States and France are self-described "exceptional" countries. The United States and France are therefore two Western countries separated by different exceptionalist logics. Lyombe Eko uses this concept of exceptionalism as a theoretical framework for the analysis of American and French resolution of problems of human rights and freedom of expression in the traditional media and on the Internet. This book therefore analyzes how each country applies rules and regulations designed to manage a number of issues of media communication in real space, to the realities and specificities of cyberspace, within the framework of their respective exceptionalist logics. The fundamental question addressed concerns what happens when rules and regulations designed to regulate the media in clearly defined, national and regional geographic spaces, are suddenly confronted with the new realities and multi-communication platforms of the interconnected virtual sphere of cyberspace.

online media archives: Digitale Verfügbarkeit von audiovisuellen Archiven im Internet-Zeitalter Christiane Fennesz-Juhász, 2010

online media archives: Programming the Semantic Web Toby Segaran, Colin Evans, Jamie Taylor, 2009-07-09 With this book, the promise of the Semantic Web -- in which machines can find, share, and combine data on the Web -- is not just a technical possibility, but a practical reality. Programming the Semantic Web demonstrates several ways to implement semantic web applications, using current and emerging standards and technologies. You'll learn how to

incorporate existing data sources into semantically aware applications and publish rich semantic data. Each chapter walks you through a single piece of semantic technology and explains how you can use it to solve real problems. Whether you're writing a simple mashup or maintaining a high-performance enterprise solution, Programming the Semantic Web provides a standard, flexible approach for integrating and future-proofing systems and data. This book will help you: Learn how the Semantic Web allows new and unexpected uses of data to emerge Understand how semantic technologies promote data portability with a simple, abstract model for knowledge representation Become familiar with semantic standards, such as the Resource Description Framework (RDF) and the Web Ontology Language (OWL) Make use of semantic programming techniques to both enrich and simplify current web applications

online media archives: Sustainable Audiovisual Collections Through Collaboration

Rachael Stoeltje, Vicki Shively, George Boston, Lars Gaustad, 2017-08-01 The art and science of audiovisual preservation and access has evolved at breakneck speed in the digital age. The Joint Technical Symposium (JTS) is organized by the Coordinating Council of Audiovisual Archives Associations and brings experts from around the world to learn of technologies and developments in the technical issues affecting the long-term survival and accessibility of audiovisual collections. This collection of essays is derived from presentations made at the 2016 JTS held in Singapore and presents an overview of the latest audiovisual preservation methods and techniques, archival best practices in media storage, as well as analog-to-digital conversion challenges and their solutions.

online media archives: Advances in Multimedia Modeling Susanne Boll, Qi Tian, Lei Zhang, Zili Zhang, Yi-Ping Phoebe Chen, 2009-12-24 The 16th international conference on Multimedia Modeling (MMM2010) was held in the famous mountain city Chongqing, China, January 6-8, 2010, and hosted by Southwest University. MMM is a leading international conference for researchers and industry practitioners to share their new ideas, original research results and practical development experiences from all multimedia related areas.

MMM2010 attracted more than 160 regular, special session, and demo session submissions from 21 countries/regions around the world. All submitted papers were reviewed by at least two PC members or external reviewers, and most of them were reviewed by three reviewers. The review process was very selective. From the total of 133 submissions to the main track, 43 (32. 3%) were accepted as regular papers, 22 (16. 5%) as short papers. In all, 15 papers were received for three special sessions, which is by invitation only, and 14 submissions were received for a demo session, with 9 being selected. Authors of accepted papers come from 16 countries/regions. This volume of the proceedings contains the abstracts of three invited talks and all the regular, short, special session and demo papers. The regular papers were categorized into nine sections: 3D modeling; advanced video coding and adaptation; face, gesture and applications; image processing; image retrieval; learning semantic concepts; media analysis and modeling; semantic video concepts; and tracking and motion analysis. Three special sessions were video analysis and event recognition, cross-X multimedia mining in large scale, and mobile computing and applications. The technical program featured three invited talks, parallel oral presentation of all the accepted regular and special session papers, and poster sessions for short and demo papers.
