NODE.JS// - What is Node.js and why should I care? Es gibt nur wenige Sprachen, die sich seit so langer Zeit so klar am Markt behaupten wie JavaScript. Dies ist durchaus erstaunlich, wenn man sich vor Augen hält, wie der Werdegang von JavaScript aussieht und wie schlecht sein Ruf war. Mit Node.js und der darunter liegenden V8 Engine von Google ist mehr entstanden als nur eine hoch performante Server-Runtime: Wir können jetzt auf ein riesiges System von Modulen zurückgreifen und auf professionelle Entwicklungswerkzeuge, die den Vergleich mit Tools aus dem Enterprise-Umfeld nicht scheuen müssen. Wenn massiver Datenverkehr behandelt werden muss, ist Node.js eine valide Option, weil es Server viel besser auslasten kann als traditionelle Systeme. Es kann mehr Leistung auf vorhandener Hardware erbringen oder den selben Ansturm mit weniger Ressourcen abarbeiten. Führt man sich die bereits heute sichtbaren Auswirkungen der Digitalisierung vor Augen, so ist unstrittig, dass es immer weniger attraktiv sein wird, Systeme mit einem großen Resource-Footprint zu betreiben. Node.js und JavaScript hingegen können genau hier ihre Fähigkeiten ausspielen und werden sicherlich noch lange im Markt zu finden sein. modules 13th edition download: [Windows PowerShell Desired State Configuration Revealed](#) Ravikanth Chaganti, 2014-10-01 Desired State Configuration (DSC) is a powerful configuration management platform that makes it easier than ever to perform cross-platform configuration management of your infrastructure, whether on-premise or in the cloud. DSC provides the management platform and Application Programming Interface (API) that can be used with any programming language. Windows PowerShell Desired State Configuration Revealed will take you through this new technology from start to finish and demonstrates the DSC interfaces through Windows PowerShell. DSC allows you to manage target devices by simply declaring what state you want them to be in, using new declarative language extensions, rather than writing detailed instructions to get them into that state. This makes continuous delivery in Windows easier than ever before. In an environment where changes and deployments are happening all the time, DSC makes the necessary adjustments to the system so you don't have to. Windows PowerShell Desired State Configuration Revealed starts with an overview of the configuration management features in Windows, followed by a discussion of the architecture of DSC and its components. You'll then explore DSC's built-in features and resources, followed by some of the different methods provided for delivering configuration information within your ecosystem, and learn about configuration monitoring and reporting. In the latter part of the book, you'll find out how to get more power out of DSC by writing your own custom DSC resources, including a range of useful examples, and the book concludes with vital information on deploying and troubleshooting DSC in a production environment, along with some expert tips and tricks you might find useful along the way. Windows PowerShell Desired State Configuration Revealed is your one-stop guide to this new technology and how it can change your working life for the better.

modules 13th edition download: *Implementing Enterprise Cyber Security with Open-Source Software and Standard Architecture: Volume II* Anand Handa, Rohit Negi, S. Venkatesan, Sandeep K. Shukla, 2023-07-27 Cyber security is one of the most critical problems faced by enterprises, government organizations, education institutes, small and medium scale businesses, and medical institutions today. Creating a cyber security posture through proper cyber security architecture, deployment of cyber defense tools, and building a security operation center are critical for all such organizations given the preponderance of cyber threats. However, cyber defense tools are expensive, and many small and medium-scale business houses cannot procure these tools within their budgets. Even those business houses that manage to procure them cannot use them effectively because of the lack of human resources and the knowledge of the standard enterprise security architecture. In 2020, the C3i Center at the Indian Institute of Technology Kanpur developed a professional certification course where IT professionals from various organizations go through rigorous six-month long training in cyber defense. During their training, groups within the cohort collaborate on team projects to develop cybersecurity solutions for problems such as malware analysis, threat intelligence collection, endpoint detection and protection, network intrusion detection, developing security incidents, event management systems, etc. All these projects leverage open-source tools, and code from various sources, and hence can be also constructed by others if the recipe to construct such tools is known. It is therefore beneficial if we put these recipes out in the form of book chapters such that small and medium scale businesses can create these tools based on open-source components, easily following the content of the chapters. In 2021, we published the first volume of this series based on the projects done by cohort 1 of the course. This volume, second in the series has new recipes and tool development expertise based on the projects done by cohort 3 of this training program. This volume consists of nine chapters that describe experience and know-how of projects in malware analysis, web application security, intrusion detection system, and honeypot

in sufficient detail so they can be recreated by anyone looking to develop home grown solutions to defend themselves from cyber-attacks.

modules 13th edition download: Grundkurs Web-Programmierung Günter Pomaska, 2015-02-27 Web, Statik und Dynamik Hypertext Markup Language (HTML) ist die Beschreibungssprache für Internetseiten. Ein Dokument, formuliert in HTML, wird von einem Webserver auf Anfrage an einen Webbrowser, den Client, übermittelt. Der Webbrowser hat die Aufgabe der Umsetzung des Dokumenteninhalts in grafisch ansprechende Form. Durch eingebettete Hyperlinks wird auf beliebig verteilte Dokumente im Web verwiesen. Das Verhalten der Seite ist statisch. Der Bildschirminhalt verändert sich nur nach Anforderung einer neuen Webseite. Der Anteil statischer Webseiten an den gesamten Internetanwendungen ist nur noch gering und verliert an Bedeutung. Das Internet ist dynamisch. Durch Benutzereingriffe verändert sich der Inhalt angezeigter Webseiten. Hierbei ist zu unterscheiden zwischen clientseitiger Dynamik und serverseitiger Dynamik. Im ersten Fall

erfolgen die Veränderungen durch Prozesse auf dem Clientrechner. Serverseitige Dynamik besteht in der Ausführung von Scripten oder Programmen auf dem Fremdrechner. Sprachen und Werkzeuge zur Erstellung dynamischer Webseiten sind u. a. JavaScript, Java, XML, SVG, PHP, SQL, um nur einige mit ihren Abkürzungen zu benennen. Diese Technologien ermöglichen Internetanwendungen, die für ein breiteres Spektrum einsetzbar sind als nur zur Publikation von HTML-Dokumenten.
