music writing skills pdf: Towards a Twenty-First-Century Feminist Politics of Music

Sally Macarthur, 2016-02-24 *Towards a Twenty-First-Century Feminist Politics of Music* opens up a new way of thinking about the absence of women's music. It does not aim to find 'a solution' in a liberal feminist sense, but to discover new potentialities, new possibilities for thought and action. Sally Macarthur encourages us, with the assistance of Deleuze, and feminist-Deleuzian work, to begin the important work of imagining what else might be possible, not in order to provide answers but to open up the as yet unknown. The power of thought - or what Deleuze calls the 'virtual' - opens up new possibilities. Macarthur suggests that the future for women's 'new' music is not tied to the predictable and known but to futures beyond the already-known. Previous research concludes that women's music is virtually absent from the concert hall, and yet fails to find a way of changing this situation. Macarthur finds that the flaw in the recommendations flowing from past research is that it envisages the future from the standpoint of the present, and it relies on a set of pre-determined goals. It thus replicates the present reality, so reinforcing rather than changing the status quo. Macarthur challenges this thinking, and argues that this repetitive way of thinking is stuck in the present, unable to move forward. Macarthur situates her argument in the context of current dominant neoliberal thought and practice. She argues that women have generally not thrived in the neoliberal model of the composer, which envisages the composer as an individual, autonomous creator and entrepreneur. Successful female composers must work with this dominant, modernist aesthetic and exploit the image of the neo-romantic, entrepreneurial creator. This book sets out in contrast to develop a new conception of subjectivity that sows the seeds of a twenty-first-century feminist politics of music.

music writing skills pdf: Musical Instruments in the 21st Century Till Bovermann, Alberto

de Campo, Hauke Egermann, Sarah-Indriyati Hardjowirogo, Stefan Weinzierl, 2016-12-09 By exploring the many different types and forms of contemporary musical instruments, this book contributes to a better understanding of the conditions of instrumentality in the 21st century. Providing insights from science, humanities and the arts, authors from a wide range of disciplines discuss the following questions: • What are the conditions under which an object is recognized as a musical instrument? • What are the actions and procedures typically associated with musical instruments? • What kind of (mental and physical) knowledge do we access in order to recognize or use something as a musical instrument? • How is this knowledge being shaped by cultural conventions and temporal conditions? • How do algorithmic processes 'change the game' of musical performance, and as a result, how do they affect notions of instrumentality? • How do we address the question of instrumental identity within an instrument's design process? • What properties can be used to differentiate successful and unsuccessful instruments? Do these properties also contribute to the instrumentality of an object in general? What does success mean within an artistic, commercial, technological, or scientific context?

music writing skills pdf: Understanding the Classical Music Profession Dawn Elizabeth

Bennett, 2016-02-24 Understanding the Classical Music Profession is an essential resource for educators, practitioners and researchers who seek to understand the careers of classically-trained musicians, and the extent to which professional practice is reflected within existing classical performance-based music education and training. Taking Australia as a case-study, Dawn Bennett outlines how Australia is now a service economy, and an important component of service provision is in the culture and recreation industries. Despite this, employment in culture and recreation is poorly understood and a lack of cultural intelligence contributes to a less than satisfactory environment that inhibits the creative potential of cultural practitioners. Musicians in the twenty-first century require a broad and evolving base of skills and knowledge to sustain their careers as cultural practitioners. Bennett maintains that a musician cannot be simply defined as a performer, but that a musician is someone who works within the profession of music in one or more specialist fields. The perception of a musician as a multi-skilled professional working within a portfolio career has significant implications for policy, funding, education and training, and for practitioners and students seeking to achieve sustainable careers. This indispensable book provides a comprehensive analysis of life as a musician, from education and training to professional practice as well as revealing the structure of the Australian cultural industries. Although Australia is the focus of the book, the basis of the research originates from many different places and most of the issues discussed relate directly to other countries throughout the world.

music writing skills pdf: Reading Across the Disciplines Karen Manarin, 2022-05-03 Reading Across the Disciplines offers a collection of twelve essays detailing a range of approaches to dealing with students' reading needs at the college level. Transforming reading in higher education requires more than individual faculty members working on SoTL projects in their particular fields. Teachers need to consider reading across the disciplines. In this collection, authors from Australia and North America, teaching in a variety of disciplines, explore reading in undergraduate courses, doctoral seminars, and faculty development activities. By paying attention to the particular classroom and placing those observations in conversation with scholarly literature, they create new knowledge about reading in higher education from disciplinary and cross-disciplinary perspectives. Reading Across the Disciplines demonstrates how existing research about reading can be applied to specific classroom contexts, offering models for faculty members whose own research interests may lie elsewhere but who believe in the importance of reading.

music writing skills pdf: Music and Fuzzy Logic Hanns-Werner Heister, 2021-02-21 This book unfolds the manifold, complex and intertwined relations between Fuzzy Logic and music in a first comprehensive overview on this topic: systematically as an outline, as completely as possible, in the aspects of Fuzzy Logic in this relation, and especially in music as a process with three main phases, five anthropological layers, and thirteen forms of existence of the art work (Classics, Jazz, Pop, Folklore). Being concerned with the ontological, gnoseological, psychological, and (music-) aesthetical status and the relative importance of different phenomena of relationship between music and Fuzzy Logic, the explication follows the four main principles (with five phenotypes) of Fuzzy Logic with respect to music: similarity, sharpening 1 as filtering, sharpening 2 as crystallization, blurring, and variation. The book reports on years of author's research on topics that have been only little explored so far in the area of Music and Fuzzy Logic. It merges concepts of music analysis with fuzzy logical modes of thinking, in a unique way that is expected to attract both specialists of music and specialists of Fuzzy Logic, and also non-specialists in both fields. The book introduces the concept of dialectic between sharpening and - conscious - "blurring". In turn, some important aspects of this dialectic are discussed, placing them in an historical dimension, and ending in the postulation of a 'musical turn' in the sciences, with some important reflections concerning a "Philosophy of Fuzzy Logic". Moreover, a production-oriented thinking is borrowed from fuzzy logic to musicology in this book, opening new perspectives in music, and possibly also in other artistic fields.

music writing skills pdf: The Oxford Handbook of Music Education, Volume 2 Gary McPherson, Graham Welch, 2012-07-15 Music education takes place in many contexts, both formal and informal. Be it in a school or music studio, while making music with friends or family, or even while travelling in a car, walking through a shopping mall or watching television, our myriad sonic experiences accumulate from the earliest months of life to foster our facility for making sense of the sound worlds in which we live. The Oxford Handbook of Music Education offers a comprehensive overview of the many facets of musical experience, behavior and development in relation to this diverse variety of contexts. While the first volume primarily focuses on children during school-age years, this second collects an international list of contributors to explore how music learning takes place outside of the traditional classroom environment. Discussing a range of issues such as music education for the special needs population, music learning in adulthood, and music learning through media and technology these chapters help to broaden conceptions of music and musical involvement. Whether they are used individually or in tandem, the two volumes of The Oxford Handbook of Music Education update and redefine the discipline, and show how individuals across the world learn, enjoy and share the power and uniqueness of music.

music writing skills pdf: Delivering Authentic Arts Education 4e Judith Dinham, 2019-09-30 This market-leading practical text helps student teachers develop their confidence, understanding and skills to effectively and authentically teach arts. With a strong balance between theory and practice, Delivering Authentic Arts Education outlines the true nature of the key learning area of arts education and its importance in the curriculum, emphasising the arts as forms of creative activity, meaning-making and expression in a cultural context. Initial chapters discuss how to recognise and build on existing artistic abilities and pedagogical skills, how to encourage children's creativity, how to lead arts appreciation experiences, and the general principles of planning and assessment. Part 2 specifically examines the five arts areas: dance, drama, media arts, music and visual arts. The final part of the text, Units of Inquiry, contains valuable sample learning activities and resources that demonstrate how to plan an effective lesson within a unit of inquiry.

music writing skills pdf: Technology and the Gendering of Music Education Victoria Armstrong, 2016-03-09 Critical of technologically determinist assumptions underpinning current educational policy, Victoria Armstrong argues that this growing technicism has grave implications for the music classroom where composition is often synonymous with the music technology suite. The use of computers and associated compositional software in music education is frequently decontextualized from cultural and social relationships, thereby ignoring the fact that new technologies are used and developed within existing social spaces that are always already delineated along gender lines. Armstrong suggests these gender-technology relations have a profound effect on

the ways adolescents compose music as well as how gendered identities in the technologized music classroom are constructed. Drawing together perspectives from the sociology of science and technology studies (STS) and the sociology of music, Armstrong examines the gendered processes and practices that contribute to how students learn about technology, the repertoire of teacher and student talk, its effect on student confidence and the issue of male control of technological knowledge. Even though girls and female teachers have technological knowledge and skill, the continuing material and symbolic associations of technology with men and masculinity contribute to the perception of women as less able and less interested in all things technological. In light of the fact that music technology is now central to many music-making practices across all sectors of education from primary, secondary through to higher education, this book provides a timely critical analysis that powerfully demonstrates why the relationship between gender and music technology should remain an important empirical consideration.

music writing skills pdf: Music, Text and Translation Helen Julia Minors, 2012-12-20 Expanding the notion of translation, this book specifically focuses on the transferences between music and text. The concept of 'translation' is often limited solely to language transfer. It is, however, a process occurring within and around most forms of artistic expression. Music, considered a language in its own right, often refers to text discourse and other art forms. In translation, this referential relationship must be translated too. How is music affected by text translation? How does music influence the translation of the text it sets? How is the sense of both the text and the music transferred in the translation process? Combining theory with practice, the book questions the process and role translation has to play in a musical context. It provides a range of case studies across interdisciplinary fields. It is the first collection on music in translation that is not restricted to one discipline, including explorations of opera libretti, surtitling, art song, musicals, poetry, painting, sculpture and biography, alongside looking at issues of accessibility.

music writing skills pdf: Writing and Unwriting (Media) Art History Joasia Krysa, Jussi Parikka, 2015-09-11 A critical mapping of the multiplicities of Finnish artist and technology pioneer Erkki Kurenniemi—composer of electronic music, experimental filmmaker, inventor, collector, futurologist. Over the past forty years, Finnish artist and technology pioneer Erkki Kurenniemi (b. 1941) has been a composer of electronic music, experimental filmmaker, computer animator, roboticist, inventor, and futurologist. Kurenniemi is a hybrid—a scientist-humanist-artist. Relatively unknown outside Nordic countries until his 2012 Documenta 13 exhibition, "In 2048," Kurenniemi may at last be achieving international recognition. This book offers an excavation, a critical mapping, and an elaboration of Kurenniemi's multiplicities. The contributors describe Kurenniemi's enthusiastic, and rather obsessive, recording of everyday life and how this archiving was part of his process; his exploratory artistic practice, with productive failure an inherent part of his method; his relationship to scientific and technological developments in media culture; and his work in electronic and digital music, including his development of automated composition systems and his "video-organ," DIMI-O. A "Visual Archive," a section of interviews with the artist, and a selection of his original writings (translated and published for the first time) further document Kurenniemi's achievements. But the book is not just about one artist in his time; it is about emerging media arts, interfaces, and archival fever in creative practices, read through the lens of Kurenniemi.
