outdoor emergency care ebook: Outdoor Emergency Care Edward C. McNamara, David H. Johe, Deborah A. Endly, 2021 For over eighty years the National Ski Patrol (NSP) has trained people who have successfully cared for thousands of injured snow sports enthusiasts. Early in its history an Advanced Red Cross first aid course was used for training. Since that time pre-hospital care has

significantly changed. The public has greater expectations of care now, so the NSP has improved the patrol-ler's level of training to that of an NHTSA (National Highway Traffic Safety Administration) Emergency Medical Responder. Today there are a variety of outdoor activities available at ski areas, bike parks, and other land management areas that occur during all seasons of the year. As a result, the NSP changed the medical training of patrollers to cover not just snow sports, but a variety of other non-winter activities, including mountain biking, ziplining, downhill bike racing, and bike parks. In the mid 1980's Dr. Warren Bowman, the National Medical Advisor for the NSP created a text and course called Winter Emergency Care providing prehospital medical care training for ski patrollers. Today, the program, aptly named Outdoor Emergency Care, is the backbone of the NSP's medical training program. It is also the standard of training for other organizations using an Emergency Medical Responder curriculum involved with outdoor recreation. Outdoor Emergency Care (OEC) is the primary resource for a student who wants to become a ski or bicycle patroller, or prehospital first responder called an OEC Technician. It also has value for other outdoor enthusiasts. It bridges the gap between urban medical responders with immediate access to an ambulance and advanced equipment, and wilderness search-and-rescue personnel who are several hours from advanced care. No other comprehensive medical textbook covers this niche of prehospital care . River rafters, rope-course rescuers, cavers, park rangers, mountain bike race personnel, search-and-rescue personnel, rescuers at large sporting events, and outdoor concerts will find the information in this text invaluable when providing care for patients--

This book shows how the tools, techniques, technologies, and tactics around analytics and AI can be best leveraged and utilised to realise a healthcare value proposition of better quality, better access and high value for everyone every day, everywhere. The book presents a triumvirate approach including technical, business and medical aspects of data and analytics and by so doing takes a responsible approach to this key area. This work serves to introduce the critical issues in AI and analytics for healthcare to students, practitioners, and researchers.

outdoor emergency care ebook: *Pandemic, Lockdown, and Digital Transformation* Saqib Saeed, Manuel Pedro Rodríguez Bolívar, Ramayah Thurasamy, 2022-01-01 This edited volume discusses digital transformation in the context of the COVID-19 pandemic. In the wake of the COVID-19 pandemic and the widespread lockdown policies that followed, digital technologies were touted as an effective means towards ensuring continuity and minimal interruption of day-to-day operations for businesses and other institutions. Digital transformation, however, is an inherently complex process and the pressure of short adoption times may further increase complexities for organizations looking to foster digital technologies. This volume comprises original research

contributions on theoretical foundations and empirical studies of digital transformations in the pandemic era. Written by academics and practitioners from diverse disciplines and industries, the chapters cover topics such as psychological and technical implications of pandemic situations, the economic, organizational, social, and legal implications of digital adoption, and case studies for digital transformation in different industries. This book will be useful for academics, technology professionals, business policy makers, NGO managers, and governments looking to optimize their digital transformation processes to better prepare their organizations in the presence of pandemic situations.
