practice clinical research download: Achieving Equity in Neurological Practice Bruce Ovbiagele, Sharon Lewis, Daniel José Correa, Reena Thomas, Larry CharlestonIV, 2024-10-22 The recent high-profile murders of George Floyd, and other African American individuals, along with the prevailing coronavirus disease (COVID-19) pandemic have reinforced the notion that certain marginalized populations have worse health outcomes than other populations, likely due to unequal and unjust policies and practices. Neurological processes and prognoses frequently vary by sex/gender, race/ethnicity, socioeconomic status, and geographic location. In particular, individuals of lower socioeconomic status and from minority racial and ethnic backgrounds have worse neurological health and often receive a lower standard of neurological care. These inequities in neurological outcomes are attributed to wider societal social influences, which impact how people live and how neurology is practiced. Published evidence suggests that healthcare providers and the healthcare system contribute to inequities in neurological care for vulnerable and underserved populations. However, educating neurology care providers about these issues and training them to provide equitable care for these patients can potentially improve neurology care access, delivery, and outcomes. In this book we provide the theoretical background, scientific evidence, and experiential knowledge warranted to properly care for vulnerable, underserved patients with neurological diseases at the levels of the provider and system. This book examines the root causes of neurological health inequities across a broad range of topics and offers possible solutions for achieving neurological health equity. Initial chapters help to frame the overall issue of neurological health equity. Subsequent chapters evaluate neurological health equity from the clinical practice standpoint, with a focus on select populations and subspecialty care delivery settings. Lastly, we discuss the bigger picture with regard to the pipeline of practitioners and purview of policy makers. This text is relevant for neurology residents and fellows, multidisciplinary neurological care practitioners (neurologists, neurosurgeons, advanced practice providers, hospitalists, emergency physicians, critical care physicians, pharmacists, and allied health personnel), and public health researchers and health policy makers. The book is divided into three sections: Principles, Neurological Conditions, and Priorities. The first section establishes the framework and explains various key terminologies and concepts, which undergird the care of vulnerable and undeserved patient populations. The second section, Neurological Conditions, covers key neurological diseases by sub-specialty describing published evidence of care and outcome disparities, gaps in knowledge, practical techniques for bridging these disparities on provider and system levels. The third section, Priorities, identifies important areas of focus and improvement targeting trainees, researchers, community partners, stakeholder organizations and policy makers, which would be crucial for implementing sustained societal-level enhancements in the neurological health of these vulnerable populations.

practice clinical research download: Epidemiologische Methoden Lothar Kreienbrock, Iris Pigeot, Wolfgang Ahrens, 2012-02-02 Jeder der epidemiologische Studien plant, organisiert oder auswertet, muss quantitativ-statistische Methoden nutzen. Wer solche Untersuchungen aus erster Hand verstehen und beurteilen will, braucht dafür statistische und methodische Kenntnisse. So manche Kontroverse über epidemiologische Studien rührt daher, dass entweder inadäquate Methoden verwendet oder statistische Aussagen falsch interpretiert werden. Ziel dieses Buches ist es daher, die für epidemiologische Studien notwendigen methodischen Kenntnisse von Grund auf zu vermitteln und anhand von Beispielen zu erläutern. Dazu werden die Konzepte der Konstruktion und Gewinnung epidemiologischer Maßzahlen, die wichtigsten Erhebungsmethoden, die Bewertung und Korrektur von Fehlerquellen sowie die grundlegenden Auswertungsmethoden epidemiologischer Studien beschrieben. Die für die Epidemiologie wichtigen statistischen Methoden werden in einem eigenen Anhang beschrieben. Das Buch richtet sich an alle, die im Rahmen ihrer Arbeit mit epidemiologischen Studien beschäftigt sind. Somit ist es für Studierende der Human- und Tiermedizin sowie der Naturwissenschaften und für Wissenschaftler und Praktiker in Gesundheits- und Tiergesundheitsbehörden und Forschungseinrichtungen gleichermaßen geeignet. In seiner 5. Neuauflage wurde das Autorenteam ergänzt und der Text umfangreichen Aktualisierungen und Erweiterungen unterzogen. Insbesondere wurden jetzt eine Vielzahl von aktuellen praktischen Beispielen, neue Kapitel zur Durchführung und zur Bewertung epidemiologischer Studien sowie weitere statistische Verfahren wie die Poisson-Regression und die Regression mit Proportional Odds aufgenommen.

practice clinical research download: Clinical research in resource-limited settings Council for International Organizations of Medical Sciences (CIOMS) , 2021-06-16 Evidence generated through responsible clinical research is one of the major pillars of the advancement of health care. In past decades there has been tremendous progress in the clinical research and development (R & D) environment globally, with increasing attention being paid to the health needs of people in resource-limited settings, where most of the preventable morbidity and mortality occurs. However, financial, social, ethical and regulatory challenges persist in low- and middle-income countries (LMICs), and most clinical research today is still being conducted in and for high-income countries (HICs). The aim of this report is to provide balanced arguments to promote scientifically sound good quality clinical research in low-resource settings. This report reflects the consensus opinion of the CIOMS Working Group on Clinical Research in Resource-Limited Settings, and was finalized in line with comments received during public consultation. The report is intended for governments and regulatory authorities, the research community and sponsors, as well as international organizations involved in funding or conducting research. The report provides a comprehensive set of recommendations to all major stakeholders. While it builds on the 2016 CIOMS International Ethical Guidelines for Health-related Research Involving Humans, it is not intended to supersede those guidelines. <https://doi.org/10.56759/cyqe7288>
