pollution remedies documents download: New Source Review for Stationary Sources of Air Pollution National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Changes in New Source Review Programs for Stationary Sources of Air Pollutants, 2006-11-30 The Clean Air Act established a pair of programs—known as New Source Review (NSR)—that regulate large stationary sources of air pollution, such as factories and electricity-generating facilities. Congress then asked the National Research Council to estimate the effects of NSR rule changes made in 2002 and 2003 in terms of the effects on emissions and human health, and changes in operating efficiency (including energy efficiency), pollution prevention, and pollution-control activities. New Source Review for Stationary Sources of Air Pollution provides insights into the potential effects of the rule changes on national emissions from the electric power industry. Although this book focuses on the 2002 and 2003 rules, its analytic framework applies to other possible changes in NSR and to other regulatory contexts. Helpful, in that it outlines the data-collection efforts needed to assess the impact of the NSR rules, the book recommends EPA and other government agencies undertake and sustain the recommended methods.

pollution remedies documents download: Human Exposure Assessment for Airborne Pollutants National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Advances in Assessing Human Exposure to Airborne Pollutants, 1991-02-01 Most people in the United States spend far more time indoors than outdoors. Yet, many air pollution regulations and risk assessments focus on outdoor air. These often overlook contact with harmful contaminants that may be at their most dangerous concentrations indoors. A new book from the National Research Council explores the need for strategies to address indoor and outdoor exposures and examines the methods and tools available for finding out where and when significant exposures occur. The volume includes: A conceptual framework and common terminology that investigators from different disciplines can use to make more accurate assessments of human exposure to airborne contaminants. An update of important developments in assessing exposure to airborne contaminants: ambient air sampling and physical chemical measurements, biological markers, questionnaires, time-activity diaries, and modeling. A series of examples of how exposure assessments have been applied-properly and improperly-to public health issues and how the committee's suggested framework can be brought into practice. This volume will provide important insights to improve risk assessment, risk management, pollution control, and regulatory programs.

pollution remedies documents download: Effects of Insurance on Maritime Liability Law Muhammad Masum Billah, 2014-01-07 The book examines how the absence of insurance in the past

led to some special maritime liability law principles such as 'general average' (i.e., losses or expenses shared by all the parties to a maritime adventure) and the limitation of shipowners' liability. In the absence of insurance, these principles served the function of insurance mostly for shipowners. As commercial marine insurance is now widely available, these principles have lost their justification and may in fact interfere with the most important goal of liability law i.e., deterrence from negligence. The work thus recommends their abolition. It further argues that when insurance is easily available and affordable to the both parties to a liability claim, the main goal of liability law should be deterrence as opposed to compensation. This is exactly the case with the maritime cargo liability claims where both cargo owners and shipowners are invariably insured. As a result, the sole focus of cargo liability law should be and to a great extent, is deterrence. On the other hand in the vessel-source oil pollution liability setting, pollution victims are not usually insured. Therefore oil pollution liability law has to cater both for compensation and deterrence, the two traditional goals of liability law. The final question the work addresses is whether the deterrent effect of liability law is affected by the availability of liability insurance. Contrary to the popular belief the work attempts to prove that the presence of liability insurance is not necessarily a hindrance but can be a complementary force towards the realization of deterrent goal of liability law.
