startup management download: Technological Innovation and International Competitiveness for Business Growth João J. M. Ferreira, Sérgio J. Teixeira, Hussain G. Rammal, 2020-10-22 This book explores how companies combine technological innovation and competitive actions that create new opportunities for business growth in the international market. The complexity of designing today's technology platforms requires profound knowledge in multiple areas. Technology development and commercialization as an ongoing competitive process involves enabling and inhibiting mechanisms, which govern the speed and acceleration of technological innovation. To compete more effectively, potential competitors are using cooptation and pooling their resources for shared gain in areas where they do not compete directly. Thus, a thorough examination of the current paradigms, theories, and frameworks is needed to increase our understanding of the technology-innovation-competitiveness linkages of business growth. This book brings together recent developments and methodological contributions within technological innovation, international competitiveness, and business growth that bridge the existing gaps and simultaneously advances the debate on this research topic.
