secondary education textbooks pdf: *Intercultural Learning in Textbooks* Sara Vali, 2015-09-02 Given the interest in recent years in developing Intercultural Communicative Competence (ICC) as a key aim in teaching a foreign language, textbooks are often studied and evaluated in terms of their roles and impacts on the promotion of intercultural awareness among language learners. While some textbook designers prefer to focus on the target language culture, others mainly consider the local culture. However, as most of the research has been conducted on a textbook or a series of coursebooks in a single country, there are few studies which analyze the textbooks comparatively in an international setting concerning cultural matters. Thus, the present work attempts to enrich this discussion by analyzing four English textbooks at the first grade of upper-secondary school level from intercultural perspectives in Germany, Iran, the Netherlands and Sweden. In this case, this study aims to investigate the extent to which the texts and activities in the textbooks develop intercultural competence.

secondary education textbooks pdf: *Textbooks in Academic Libraries* Chris Diaz,

2018-12-03 Shortly after the syllabi are posted, and long before the beginning of the term, interlibrary loan departments at academic libraries will have filled or rejected innumerable textbook requests. While it would be unwise if not impossible to buy and circulate every textbook at a college or university, there are many academic libraries who are selectively adding textbooks to their collections. And the practice seems to be gaining momentum. In this volume, the Association for Library Collections and Technical Services (ALCTS) and editor Chris Diaz gather case studies that pull together creative approaches and best practices for print textbook reserve programs. This book discusses such topics as results and analysis from a detailed survey of a state university's core-course textbook reserve program; funding sources for starting or piloting a program; using aggregated enrollment, grade, and textbook cost data to identify high impact courses; identifying course-related books that are in the library's collection or fit an existing collection policy; workflow for using bookstore data with ILS and purchasing systems; and using LibGuides and Google Sheets to publicize textbook holdings, and how a back-end database supports discovery for students and reporting for reserves staff. A textbook reserve program can be one way of helping students who are struggling with the high cost of textbooks, and this book spotlights a variety of examples that can be used as models.

secondary education textbooks pdf: Textbook English Elen Le Foll, 2024-07-15 This book provides a systematic, empirical account of the language typically presented in English as a Foreign Language (EFL) textbooks, based on a large corpus of EFL textbooks used in secondary schools. A modified version of the Multi-Dimensional Analysis (MDA) framework serves to examine linguistic variation both within textbooks and compared to corpora representing 'real-life' English as used outside the EFL classroom. The results highlight the characteristics of Textbook English that define it as a distinct variety of English. In light of the study's pedagogical implications, this book proposes a range of corpus-based approaches to improve the naturalness of textbook texts. It also contributes to advancing quantitative corpus linguistics methodology: its detailed online supplements aim for methodological transparency and reproducibility in line with the principles of Open Science. This book will be of interest to linguistics and language education students and researchers, as well as EFL teachers, textbook authors and editors, and those involved in curriculum development and teacher training.

The recommendations with which the volume concludes provide educational practitioners with guidance for using educational media in the classroom and education policymakers with encouragement to establish the trends the volume describes at the top of the research and education policy agenda.

secondary education textbooks pdf: Diversities and Interculturality in Textbooks Kaisa Hahl, Rita Johnson Longfor, Pia-Maria Niemi, 2015-04-01 Textbooks are crucial in shaping today's global and diverse world. They can contribute to making it both 'better' and more 'intercultural', but also, on occasion, create limited and biased ideas about the 'Other'. This collected volume undertakes multidisciplinary research into textbooks, taking one of the best education systems in the world - Finland - as an example. The authors investigate the issue of diversities in textbooks from multiple perspectives, disciplines, school levels and content areas. Together, the chapters provide examples of hidden ideologies, (neo-)stereotyping and othering when looking beneath the surface of texts and illustrations. The authors also present concrete tools that can be used for analysing diversities and interculturality in textbooks. In addition, the chapters will serve to develop teachers' and students' abilities to encounter diversities and similarities in ways that enhance their sensitivity,

self-reflexivity and criticality. This volume will be of interest for students in educational sciences; pre-service teachers and in-service teachers of various school subjects; teacher educators; and researchers in the areas of subject didactics, multicultural and intercultural education, language education, educational leadership, curriculum, and policy. Treagust, Chi-Yan Tsui, 2013-02-01 This new publication in the Models and Modeling in Science Education series synthesizes a wealth of international research on using multiple representations in biology education and aims for a coherent framework in using them to improve higher-order learning. Addressing a major gap in the literature, the volume proposes a theoretical model for advancing biology educators' notions of how multiple external representations (MERs) such as analogies, metaphors and visualizations can best be harnessed for improving teaching and learning in biology at all pedagogical levels. The content tackles the conceptual and linguistic difficulties of learning biology at each level—macro, micro, sub-micro, and symbolic, illustrating how MERs can be used in teaching across these levels and in various combinations, as well as in differing contexts and topic areas. The strategies outlined will help students' reasoning and problem-solving skills, enhance their ability to construct mental models and internal representations, and, ultimately, will assist in increasing public understanding of biology-related issues, a key goal in today's world of pressing concerns over societal problems about food, environment, energy, and health.
